NORTHERN MANUFACTURERS**Ahnapee Veneer & Seating Co.**

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods; notably in Mahogany & Qtd.-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

The Story of the Third Appalachian Logging Congress

Appears in LOGGING for
JANUARY 1918

instead of in December as previously
announced.

The change is due to the postpone-
ment of the meeting making it
impossible to hold the press long
enough to get the story in the Decem-
ber number.

LOGGING dons a new dress with this Jan-
uary 1918 number, climbing right into a class
with the most modern monthlies of general
appeal. Send for a sample copy FREE.

Silver Steel

CIRCULAR SAWS

Atkins Circular Saws stay sharp longest, file easily and render dependable service. This is due to the toughness of SILVER STEEL, a carefully prescribed heat treatment and scientific smithing by skilled Artisans.

ATKINS SAWS are built to serve. They satisfy in every respect and are backed in their service by Atkins Guarantee of satisfaction.

Complete Catalog on Request.

The ceaseless drive of war-time production has thrown heavy burdens on Saw Mill Equipment. Saws and machinery now must be hard driven to meet the large demand.

ATKINS SILVER STEEL SAWS contain the dominant Quality that makes them stand up where all others fail. Today this reliability is appreciated more than ever before. Atkins Saws can be readily procured from our well-equipped Branch Houses and Agencies.

ATKINS Drag Saws

Atkins Drags increase the usefulness of these wonderful machines and minimize the expense of constant attention and filing.

Quicker cuts with less fuel follow naturally when Atkins Drags get on the job. Order them at once and let the test prove the rest.

THE GOLDEN RULE

Michigan Hardwoods

Cadillac Quality

Nature has been generous in supplying Cadillac an abundant supply of superior timber and we are supplementing her work with the best methods of manufacture.

This has made Cadillac Quality famous.

Good timber, lumber well manufactured and seasoned, grades that are reliable and not blended to meet price competition, punctual service; — these are the elements of Cadillac Quality.

We sell direct to responsible dealers and manufacturers.

DIMENSION STOCK Mahogany and Walnut

Aside from our production of lumber and veneers—We are manufacturing kiln-dried mahogany and walnut dimension stock at the rate of 2,000,000 feet annually, and this department has been steadily growing since 1902. We think that these simple facts make detailed argument unnecessary—as to our prices, quality of our stock, and promptness of service.

However, we have ready for mailing a circular which explains in detail how and why you can save time money and trouble—through our dimension stock. But if you don't care for the circular, and if you realize what an expensive luxury your waste pile is, send us your cutting bills, as you would give them to your stock-cutters. We will quote a specific price for each style you manufacture.

C. C. Mengel & Brother Co.

Kentucky Soft Texture White Oak, Red Oak and Poplar, High-class, sound, square edged White Oak Timbers, 10x16 ft.
AMERICAN LBR. & MFG. CO., PITTSBURGH, PENNSYLVANIA
Manufacturer and Wholesaler

Oak was spoken of with affection in the Scriptures and will be held in esteem by our children's children generations hence.

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

TRY KNOXVILLE TENNESSEE

You can logically do so because you must ultimately depend more and more on this region for your hardwoods.

No higher type of timber can grow than that abounding in eastern Tennessee. It is found on a soil and in an environment which put quality in the trees generations ago. It is our task merely to see that this quality is utilized to the utmost in making the boards you buy. The best of equipment and highly trained organizations working in one place for years at a stretch make that task easy.

Then too you can be sure of getting the best possible service—always.

Ask about it from any of the following:

The Vestal Lumber & Mfg. Co., Knoxville, Tenn., & Fonde, Ky.

The J. M. Logan Lumber Company, Knoxville, Tenn.

The Little River Lumber Company, Townsend, Tenn.

The Babcock Lumber & Land Company, Marysville, Tenn.

(Main Office: Pittsburgh, Pa.)

OAK, POPLAR, MAPLE

Walnut, Chestnut, Hickory, Cedar, Ash, Basswood, Beech

MEMPHIS TENNESSEE

THE WONDER CITY OF HARDWOOD PRODUCTION

Fine Furniture Woods from Memphis

The Memphis district furnishes a considerable number of woods for furniture, but only three or four are of real importance. However, these few fill a prominent place in the Country's furniture industry. The oaks perhaps hold first place. Oak lumber comes from half a dozen species, some being white oaks, others red oaks. The common white oaks, which reaches its best development further north and east, extends its range over much of the Memphis district. Much of this oak is cut, holds its own wherever it goes. The forked-leaf white oak, often known as overcup oak, is more abundant and is marketed in large amounts and has an excellent reputation among furniture makers wherever it is known. Other white oaks of more or less importance in the region are post, bur, and cow oaks.

Three or four red oaks hold prominent places in trade, but the most abundant is the southern or Texan red oak, known frequently as spotted oak, because the bark is spotted. Other red oaks are known as water oak and willow oak.

Red gum clearly holds second place after oak as furniture wood in the Memphis region. Its rise in favor has been rapid and dates from the time when successful methods of seasoning it were worked out. Statistics of its use in furniture factories a few years ago would fall short of its present use. This wood when sent to Europe is known as satin walnut and hazel pine, the latter being the sapwood, the former the heartwood. It is the most popular and successful substitute for Circassian walnut which has become so scarce that it has nearly gone out of use and gum has taken its place.

Tupelo or cotton gum, often called bay poplar or simply bay, closely resembles yellow poplar and is frequently substituted for it.

Furniture factories that use ash and cottonwood procure much of their supply in the Memphis district.

Fine black walnut comes from that region, largely from the district west of the Mississippi, in Missouri, Arkansas, and Oklahoma; but much fine walnut is procured in Tennessee and Kentucky.

A New Book for the Forester and Lumberman

The Essentials of American Timber Law

By J. P. KINNEY, A. B. LL. B., M. F.

Every chapter in this book contains information that will prove of inestimable value to any one who desires to ascertain easily and quickly the fundamentals of American timber law, or who needs references to court decisions to support a well-founded view as to the law upon any particular point. It includes:

Classifications of Property. Forms of Private Profession of Land and Incidents Thereof. Trees and Timber as Property. Statutory Civil Liability for Timber Trespass. Injury to Growing Trees as a Criminal Offense. Contracts Regarding Growing Timber. Contracts Regarding the Preparation and Manufacture of Timber Products. Contracts for the Sale of Timber Products. Trees on a Boundary Line or in a Highway. The Policy of the National Government in regard to the Free Use of Timber Taken from Public Lands.

Send for your copy of this book today. You will find it a valuable guide in your work.

308 pages, 6x9. Cloth, \$3.00 net.

A floor to adore

For thirty three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

SUBSCRIPTION TERMS: In the United States and its possessions, and Canada, \$2.00 the year; in foreign countries, \$1.00 extra postage.
In conformity with the rules of the postoffice department, subscriptions are payable in advance, and in default of written orders to the contrary, are continued at our option.

Instructions for renewal, discontinuance, or change of address, should be sent one week before the date they are to go into effect. Both old and new addresses must be given.

Both display and classified advertising rates furnished upon application. Advertising copy must be received five days in advance of publication dates.
Entered as second-class matter May 26, 1902, at the postoffice at Chicago, Ill., under act of March 3, 1879.

YOU

Don't have to make claims on our shipments. We keep the doubtful boards.

SATISFY YOURSELF

Your inspector, your shop foreman, with the uniformly high grades of our perfectly manufactured stock.

Review and Outlook

General Market Conditions

WAR BUSINESS IS OVERSHADOWING all other throughout the hardwood trade. The volume of manufacturing for normal purposes does not show much reduction, but commercial consumers are following the wise policy of not going too far ahead in their purchases. They are at the same time taking in quite a little lumber, and reports from representative sources indicate a very fair volume of sales for the products manufactured therefrom.

But the dominant feature is war business, which has had the greatest influence of any one thing in raising the level of hardwood values.

With the building record for 1917 now completed, it is shown that the permits issued aggregated 32 per cent off normal volume. This showing is probably not so serious as had been expected from the tone of current reports, but it reflects a tremendous decrease in the amount of wood going into construction. Well-known authorities have, however, concurred in **HARDWOOD RECORD'S** prediction that there will be a slight improvement in the building situation as building weather comes upon us in 1918, and it would not be at all surprising if government underwriting would make possible an extensive building program. Such a policy would be for the best interest of the country as a whole, and it is merely a question of demonstrating to the powers that be that such action is entitled to equal consideration with the questions more directly affecting the war prosecution. But it will without doubt prove to be a truthful prophecy that building during the early half of 1918 will show some improvement.

As the prospect appears now, there is very reasonable promise that war materials will more than take care of the void left by recessions in normal markets for hardwoods. The opinion is given on good authority that the demand for material for containers of all kinds is barely touching the beginning; that this demand will increase to such a tremendous extent that it will require a good proportion of the manufacturing capacity of the industry. Then there is the more specialized line of production, the requirements of which are becoming not only more extensive but more practicable from month to month. A great deal of production for war purposes has been held up because of impracticable specifications which, however, are being rapidly ironed out through co-operation between government authorities and men with practical experience in the business. The result is a possibility of more speedy production of war materials and as the trade is shifted from normal stock to war production, the priority regulations coupled with government control of the roads will without question establish a period of rapid movement of lumber freight shipments.

Values are still climbing. Some items have been assisted to higher levels by the rapid climb in prices for different specialties. The result is a much higher average market all along the line. Then there is no prospect of a change other than to still higher levels.

Lumber Week

LUMBER WEEK AT MEMPHIS established a double significance. It proved the value of the co-ordination of energetic action; it also resulted in accomplishments which give promise.

The Memphis Lumbermen's Club can probably be called the father of one of the most advanced steps yet taken in the hardwood manufacturing trade. The spirit which has made possible the many big things which have been done in Memphis brought about the amalgamation of two big associations in that flourishing city last week. Detailed account is given elsewhere in this issue. But the real point is that a powerful branch of the hardwood manufacturing industry has officially and without reserve stated that its purpose is to work toward a single standard of hardwood inspection.

Just what the outcome of the amalgamation of the two Memphis associations into the American Hardwood Manufacturer's Association will be, cannot be foreseen. Just how far its development may include other bodies now carrying on important work in behalf of hardwood lumber, it is impossible to foretell. But the fact remains that there is now in existence a powerful body properly organized with its definite purpose to eventually effect a single standard for inspecting hardwood lumber. It is to be hoped that this movement will bring about that much desired step in the marketing of hardwood lumber toward which the trade has been working without results for a good many years—the merging under one official seal of the grading rules under which hardwood lumber is sold.

A Short Look Ahead

SNOW COVERS THE GROUND to a depth from one to three feet over parts or all of a dozen states drained by the Mississippi river, chiefly through its eastern tributaries. In the natural course of events, that snow will be all gone in three months. It may go by the process of a gradual thaw extending over several weeks, or the most of it may melt quickly during a few days of warm, genial rains.

If the thaw shall be gradual, the streams which drain the region will be able to carry the water to the sea without unusual floods, but if the thaw shall be speeded by warm weather and heavy rain, destructive floods are certain. The chance is at least half and half that floods are coming. They usually come in the spring, and the extra-

ordinary accumulation of snow now on the ground increases the probability that the spring floods will be destructive.

It is beyond the power of man to prevent floods under existing circumstances, but persons whose business interests are threatened can take advantage of the brief period to prepare. Proper preparation made in advance may prevent great loss. It is hardly necessary to sound the warning, for the danger is fully apparent to all interested parties and they have time to take necessary measures to protect their property, though the time may be short. February often brings warm rains and general thaws, and March most certainly will bring them.

More Fact Than Facetious

LUMBERMEN CAN MEASURE IN TERMS OF DOLLARS the truth in a recent editorial in the *American Builder*, the purport of which is that if lumber quantities were spoken of in larger units than the board foot, the public at large would not be deceived by scarehead reports of government needs for wood and wood products. The editorial comments on the way the newspapers thrilled and scared the public with figures on Uncle Sam's lumber requirements for shipbuilding.

"Six hundred million feet," it was scareheaded, would be needed! And the newspaper paragrapher drew conclusions immediately that hardly a stick would be left over for home building, barn building, etc. "Six hundred million feet! Gee whiz! That's certainly a lot of lumber!"

"Well, so it is, but how much of our total lumber production is it? Exactly one-and-one-half per cent."

The editor of *American Builder* draws the conclusion that the construction of necessary buildings is being prevented right now because the public has been fed up on big figures which they do not understand, and that prospective builders are being scared away from building by extravagant statements of Uncle Sam's drain upon our lumber resources.

The editorial suggests that lumbermen and builders should get together and devise a new unit of measure for bulk transactions and rather facetiously suggests taking as the unit of lumber the amount used in an average sized house. Thus government figures of shipbuilding would read: 24,000 "houses" of lumber were required for this purpose.

The point he makes though is a very pertinent one, and brings us back to the often discussed condition surrounding the relation between lumber and the lay mind. People do not know lumber and never will until the lumbermen tell them something about it. Lumbermen are suffering every day from just such causes as this. Lumbermen will continue to suffer until they have gotten over to the public sympathy winning propaganda of a sincere and honest nature not merely for the purpose of counteracting adverse influence of substitutes, but rather that the public may understand lumber and thus of its own accord have more sympathy for it and use more of it.

Blow Aimed at Military Prussia

IT IS NOT THE CUSTOM of the Chamber of Commerce of the United States to take hasty and spasmodic action, for that organization contains five hundred thousand of the prominent business men of this country. It acts slowly and with deliberation, and when it acts, the action is backed by tremendous force. For that reason, the referendum vote commenced on January 14 is significant. On that day the chamber began taking the vote of its members on a matter that bodes no good to the military caste in Germany. If the vote is in the affirmative, it will serve notice on the business men of Germany that they cannot establish after-war trade relations with the business interests in the United States represented by members of the National Chamber of Commerce, unless Germany shall establish a government responsible to the German people. That means, of course, that so long as the present military caste in Germany, or any similar caste, is in power, trade with America will be practically impossible.

This action has not been taken in a spirit of retaliation or revenge. It is not for the purpose of punishing Germany for its past sins, but the object is to prevent future sins of the same sort. It aims to over-

throw the military rule that for forty years has gripped Germany, and to establish in its place a government responsible to the German people. It is expected to help do this by notifying the business men of Germany that if they want to do business with us, they must put in power a government that is not military.

The reason assigned for this action is that Germany's foreign trade enabled it to prepare for the present war, and that the military government used the foreign trade for that purpose. Now, if the same military power remains in control after the present war, it would begin to make preparations for another war and would draw stores and materials from us for that purpose. Therefore, it is proposed that Germany shall provide a government that can be trusted, or do without American products.

It is believed that a measure like this, openly and honestly announced in advance, will have its effect in Germany. If the business men there know that the professional soldier must no longer run their government, or else trade with us is at an end, it will have its influence in helping the Germans to rid themselves of their military caste and to substitute a government representing the people. To that extent it will help the Germans help themselves, and ultimately they will be thankful for it, though at first, no doubt, the action of the National Chamber will be roundly denounced by the kaiser's government as an interference with the internal affairs of Germany.

The circulation of the National Chamber's decision in Germany, if the vote shall be affirmative, as it doubtless will be, will have difficulties to overcome. Of course, the German censors would not let the news pass; but it would gradually filter in from neutral countries and it would not take long for every business man in Germany to hear of it. Possibly it was in anticipation of this action by the National Chamber of Commerce that President Wilson said in his statement of our war aims that it might become necessary, in certain contingencies, to restrict Germany's trade with the United States after the war.

Collecting Excess Profits Taxes

IN VIEW OF THE FACT that the collection of excess profits taxes in lump sums would often work a serious hardship upon the industries affected, considerable support has developed for the movement to have the government collect these taxes in instalments.

The profits shown on the books of a normal, growing company, especially in the hardwood business, are seldom "cash money"; in most instances they are due to appreciation in value of lumber stocks; to the inventory values of timber, mills and other materials and accessories; and to accounts on the books—all good and collectible, but not actually banked money.

The concern which has had a good year, even a highly profitable year, cannot immediately convert its numerous assets into cash. Lumber is not always a liquid asset, even when the demand for it is good, and sales are made readily at satisfactory prices, because the railway's delays and the condition of the buyer must be taken into account in converting the material into cash.

To demand of a lumber company which is financing the operation of numerous mills and the purchase of large lots of lumber—much of which, possibly, is to be used in war work of special value to the government—that it pay its excess profits taxes immediately, is to say that it must handicap itself severely in the conduct of its business. It may even have to borrow the money to pay the taxes on its book profits—profits which are certainly there, but not in a form which makes the payment of taxes convenient.

Inasmuch as the average lumberman must make full use of his line of credit for the financing of his regular operations, paying taxes with borrowed money is a method which does not commend itself from all angles. It is possible that the necessities of the government do not require the immediate collection of profits taxes, and if this is the case, it is to be hoped, for the benefit of business in general and the hardwood trade in particular, that the divided payment plan may be given official approval.

Chicago Lumbermen's Annual Meeting

The forty-ninth annual meeting of the Lumbermen's Association of Chicago was held January 21 at Hotel Sherman, Chicago. The meeting was in the Gray room, and was called to order at four o'clock in the afternoon. The attendance was large.

This association has the distinction of being the oldest of the lumber associations of the United States, and lacks only one year of rounding out the half century mark. In the absence of the president, Edward L. Thornton, the meeting was called to order by the vice president, F. B. McMullen of the McMullen-Powell Lumber Company.

The address prepared by the president was read by Secretary Hooper. It contained instructive statistics covering lumber matters in Chicago during the past year. The total receipts of lumber in Chicago in 1917 were 3,354,117,000 feet; of shingle 611,721,000 by

was slack early in the year, and the bureau shows a shortage of \$255.86. The hope was expressed that the bureau would be self-supporting in the future, and that the members of the association should make full use of the bureau's facilities.

The report of the arbitration committee was presented by G. A. Van Ness in the absence of the chairman of the committee, George P. Rinn.

During the year seven cases were decided by the committee without expense to any of the parties, and to their satisfaction, with one exception, which came before the special arbitration committee and after a decision had been rendered this was referred to the committee on appeals by the contestants, and after its decision by that committee, was sent back to the committee on arbitration. Four more cases are waiting to be heard.

F. B. McMULLEN, VICE-PRESIDENT.

E. E. HOOPER, SECRETARY.

C. H. WORCESTER, DIRECTOR.

rail and water. The lumber receipts by water totaled 86,707,000. There was substantial increase in the receipts of both lumber and shingles in 1917 compared with the preceding year. The city consumption of lumber last year was 1,806,106,717. The association was gratified to learn that Chicago's lumber business in 1917 broke all records.

There was a slight falling off in total membership. The year commenced with 330, added 26, and lost 43. Those lost by death were John D. Ross of the Brooks & Ross Lumber Company, March 3; George D. Burgess of Russe & Burgess, April 30; Arthur Nollau of Nollau & Wolff Manufacturing Company, December 30.

George D. Griffith, treasurer of the association, filed a report of finances for the year:

Balance Jan. 1, 1917.....	\$ 262.63
Receipts during the year.....	29,879.17
Total	\$30,141.80
Disbursements	30,113.08
Balance	\$ 28.72

Committee Reports

The standing committees presented their reports showing the status of business in the several fields.

George J. Pope is chairman of the inspection committee, but he was unavoidably absent and Secretary Hooper read the report, showing that 280 claims had been adjusted for the members of the association at an average cost of \$6.50 per claim. Inspection work

The membership committee's report was read by the chairman, Wilson Martin, and showed a gain of 26 and a loss of 43, meaning a net loss of 17.

Percival S. Fletcher, chairman of the traffic committee, reviewed the work for the year. The many changes in rates and other traffic matters made this committee's work of much importance.

The entertainment committee's chairman, J. L. Lane, made an entertaining report of the good things done for the enjoyment of the members of the association.

The Division Reports

Reports from the different divisions were next in order. L. W. Crow of the Mears-Slayton Lumber Company, chairman of Division A, reached the meeting barely in time to make his report. He had just arrived from Washington, D. C., on a train that was eight hours late. He told of affairs in the nation's capital, particularly in regard to the interests of lumbermen.

There was no report by Division B of the hardwood yards, the chairman, Edward C. Schoen, being unavoidably absent.

A. C. Quixley, chairman of the hardwood wholesalers, spoke for Division C and reported that twenty-one meetings had been held and much work done.

The pine wholesalers were represented by Division D, of which Charles B. Flinn is chairman. This division's business was in a satisfactory condition.

Seth E. Barwick, chairman of Division E represented the manu-

facturers in the report he made to the meeting. His report was in the nature of a good luck story.

The commission men are grouped as Division F, and the chairman, James G. Miller, made the report to the association.

Division G, including the millmen, was not represented by its chairman, John Westberg, who was unable to be present.

The house committee was represented by F. L. Johnson who made the report concerning the restaurant facilities. It was declared that criticism of the restaurant was not well taken, because any deficiency in service was due to lack of enough patronage to make the table pay.

Directors Elected

The several divisions presented their candidates for directors who were chosen by unanimous vote, and resulted in the following elections:

DIVISION A—Charles W. Jacob, John Bader Lumber Company.

DIVISION B—Edward C. Schoen, Columbia Hardwood Lumber Company.

ness transactions. The vote on the question was unanimously affirmative.

A brief address was given by John M. Woods of Boston, president of the National Hardwood Lumber Association, his theme being the activities of the association of which he is president. He explained some of the work at Washington which had not been fully understood by some of the lumbermen of the country, particularly as it relates to transactions between hardwood men and the government.

More than 250 persons attended the annual banquet and dance in the Louis XVI room. It was one of the most successful, and by all odds the most enjoyable, of all the features of the annual meeting.

Low Cost of Medical Service

Investigators of labor conditions occasionally report that less is being done for health in the lumber industry than in many

Trade Acceptances

The place which trade acceptances should fill in modern business was the subject of an address by Henry Lawton of the foreign department of the Dearborn National bank, Chicago. The character of trade acceptances was explained, and the plan on which they are operated was shown. This class of commercial paper is new in America and it has not yet been as widely adopted as it should be.

Ours is the only great commercial country which has not yet made extensive use of trade acceptances in its business affairs. The banking people are almost solid in their indorsement of this method of closing transactions.

On motion of P. S. Fletcher, the Lumbermen's Association of Chicago went on record as indorsing trade acceptances in busi-

ness transactions. This is perhaps no reflection on the industry, but perhaps an evidence that employees do not need the supervision which is demanded in some lines in order to get the most in the form of production, likewise reduce labor turn-over. The latter is an especially important feature in these times of shortage of help.

In this connection it is interesting to learn that the cost of medical service in industry—which includes, by the way, first aid and medical service, hospital care when necessary, and nursing service for the families of employees—is \$2.21 per employee per year, on an average. This seems to be an unusually small expense, but the figures are those of Magnus W. Alexander, of the General Electric Company, Lynn, Mass., who is executive secretary of the Conference of Physicians in Industrial Practice.

The investigation on which the figures are based covered 100 industries in practically all lines, furnishing varying degrees of service and having varying costs as a result. The cost, including taking care of all accident cases, which is necessary practically in view of the requirements of workmen's compensation laws, is so small as to suggest its value to the employer from an investment standpoint.

The Lamb-Fish Lumber Company of Charleston, Miss., has done considerable along this line, even to the extent of building and equipping a hospital, and its experience is said to have been especially favorable, from the standpoint of demonstrating the value of the work. More lumbermen could study its possibilities to advantage.

MEMPHIS LUMBER WEEK

Four Big Meetings Have Momentous Results

John W. McClure, re-elected president Southern Alluvial Land Association. Director new association.

James E. Stark, re-elected president Southern Hardwood Traffic Association. Director new association.

John M. Pritchard, secretary-manager American Hardwood Manufacturers' Association.

E. A. Lang, retiring president merged American Oak Manufacturers' Association. Director new.

R. L. Jurden, president American Hardwood Manufacturers' Association

H. B. Weiss, retiring president merged Gum Lumber Manufacturers' Association. Director new.

M. B. Cooper, sub-chairman Committee of Fourteen. Director new association.

B. F. Dulweber, temporary chairman, now second vice-president new association.

W. H. Russe, first vice-president American Hardwood Manufacturers' Association.

The Men Who Will Lead in 1918

Lumber Week Features

The following pages give detailed review of the important happenings at Memphis last week when four well-known associations of lumbermen held annual meetings. The result of these gatherings was a merger of two large associations handling specialized products and important developments at the meetings of the other two associations.

The American Oak Manufacturers' Association with the Gum Lumber Manufacturers' Association each at its respective meetings formally adopted the report of the committee of fourteen looking to a merger of the two associations. The result is the formation of a much more potent organization entitled the American Hardwood Manufacturers' Association, which will be the parent to numerous divisions covering different hardwoods cut and marketed in the United States.

The parent body was organized as a means of cutting down overhead in administering the affairs of the different woods, but the various divisions, headed by men selected from the ranks of the manufacturers of the respective woods, will govern their own actions irrespective of the actions of divisions handling other species.

The traffic meeting was full of potent discussion and was pervaded by a definite war spirit, that is, a spirit which took cognizance of the importance of the times and the importance of the lumber industry in solving our war problems.

The meeting of the Southern Alluvial Land Association was enthusiastic and gave evidence of the tremendous opportunity for development in agricultural, live stock and manufacturing industries in the South.

The outstanding feature of the merger meeting is that the new association officially adopted as one of its prime purposes the carrying on of such methods and policies as may eventually lead to uniform standard of hardwood inspection. From this standpoint alone the meeting was momentous. It brought about the termination of the American Oak Manufacturers' Association and the Gum Lumber Manufacturers' Association as they have existed, although the activities of those bodies will be carried on as heretofore under division supervision.

At the meeting of the board of directors of the new association, steps were taken to immediately organize the oak and gum divisions. As provided for in the constitution other divisions covering other woods will be organized as manufacturers of those woods deem it necessary.

Another important development was the action of the Commercial Rotary Gum Association, with headquarters in Memphis, securing for it formal merger with the new American Hardwood Manufacturers' Association. Thus there are already three definite divisions of the new body with a prospect of others being formed in the near future.

The new association starts out with promising enthusiasm both on the part of the officers and its members. This body can truthfully be said to be the final outcome of the initial formation of the Memphis Lumbermen's Club several years ago as the aggressive and constructive spirit which has marked the development of that

club has brought about many developments important to the hardwood trade. It was carried through the very important traffic work resulting in the organization of the Southern Hardwood Traffic Association. It has been responsible for the organization of the Southern Alluvial Land Association, the importance of which need not be emphasized; has put gum on the map through the organization of the Gum Lumber Manufacturers' Association, and has made great strides in re-establishing oak in its proper place through the formation of the American Oak Manufacturers' Association.

Thus Memphis shows that it is entitled to first consideration as to its importance in hardwood manufacturing circles. The accomplishments coming out of Memphis have been made possible not merely by numerical strength, but more largely by the spirit which has pervaded the Memphis trade since hardwood became an important factor in that busy and rapidly developing center.

All Memphis Is Host

Every association and individual in Memphis participated in the

pleasant task of acting as host to the hundreds of visitors during the week. The entertainment features were unusual and pleasantly surprising. The chief affair in the entertainment was the banquet given at the Hotel Gayoso at Memphis on the last evening of the meetings. The big dining room of this famous stopping place was crowded to the limit with a good-natured crowd.

Instead of the usual rather uninteresting professional entertainment the diners were treated to the efforts of unusually good talent of a different kind. Musical features were interspersed with speaking, the chief musical entertainers being Mrs. W. E. Hyde, wife of W. E. Hyde of Memphis, who is well-known in hardwood circles, and Mrs. Davis L. Griffith. They were assisted by the Westminster Quartette of Memphis.

Among the prominent speakers called upon by President J. F.

McSweyn were Earl Palmer; whose title was "Happy Thoughts For Lumbermen;" C. P. J. Mooney, managing editor of the Memphis *Commercial Appeal*, who responded to the toast "Spirit of the Times;" Col. John M. Woods, president of the National Hardwood Lumber Association; Douglas Malloch of Chicago. Their remarks were happy in the extreme and the program showed unusually well balanced subjects.

President McSweyn who assumed the gavel for the first big meeting since his recent election was in fine form. Mr. "Mac" seems mentally capable of meeting any emergency when on his feet and handled the program with expedition, grace and smoothness.

"Uncle" John Woods reminisced in a most entertaining style. His thoughts reverted back to the days when it cost more to ride by rail for twenty-five miles into Boston than it now costs to go all the way from Boston to Memphis. Mr. Woods confessed to a great many more years behind him than anyone in the room thought possible.

In the line of "eats" Memphis provided a substantial luncheon in the banquet hall, prior to each meeting.

FEATURES OF THE CONSTITUTION ADOPTED BY THE AMERICAN HARDWOOD MANUFACTURERS' ASSOCIATION

The objects shall be to secure a full understanding of conditions surrounding the hardwood industry; to adopt such measures as will provide for uniform standards (amplification of this feature is shown in the empowering resolution which specifically states that it is working toward a uniform standard of inspection rules for hardwood) and improved methods of manufacturing and marketing hardwood forest products; to acquire, preserve and disseminate information in connection therewith; and to generally promote the interests and welfare of hardwood manufacturers.

The membership shall consist of individuals, firms or corporations actively engaged in the manufacture of hardwood forest products.

A majority of members representing two-thirds or more of the production within the association of any particular wood, may, upon petition to the board of directors, or by vote at any regular or called meeting of the association, organize a department for that wood or for carrying on other lines of activity that will be of mutual benefit to the membership.

These divisions are to be governed by a committee of five, selected by the membership, this committee to be known as the "governing board" for the wood in question. These respective committees will have the power to fix assessments in the production of the respective woods.

The work will be carried on by an assessment with a fixed maximum covering the entire production in all woods, this part of the assessment to go into the fund of the parent association. The respective divisions will then determine their own assessments not to exceed a fixed maximum.

Powerful Association Launched at Memphis

Merger of Gum and Oak Organizations Leads to Formation of Strong Association of Manufacturers. Aims Laudable

The American Hardwood Manufacturers' Association was formally launched at Memphis last Friday, January 18, as the successor to the American Oak Manufacturers' Association and the Gum Lumber Manufacturers' Association, following unanimous ratification, by the membership of these two organizations at their annual meetings, of the report of the committee of fourteen and the resolutions offered by the latter authorizing the merger and the transfer of membership certificates from the old associations to the new.

Governing Body Strong

Immediately following the adoption of a constitution and by laws for the new association under a temporary organization, of which B. F. Dulweber was chairman and John M. Pritchard was secretary, permanent organization was effected by the election of the following officers and directors:

PRESIDENT—R. L. Jurden, Perdue, Jurden & McCowen, Inc., Memphis.
FIRST VICE PRESIDENT—W. H. Russe, Russe & Burgess, Inc., Memphis.
SECOND VICE PRESIDENT—B. F. Dulweber, Kraetzer Cured Lumber Company, Memphis and Meridian, Miss.

of absence for the period of the war in order that he might continue to serve the Southern Hardwood Emergency Bureau at Washington as manager, a position he has held for the past two months or more. Action was adopted looking toward the immediate formation of the gum and oak divisions.

The merging of the Gum Lumber Manufacturers' Association and the American Oak Manufacturers' Association into the American Hardwood Manufacturers' Association represents the culmination of plans which have been in the making for a number of months.

Development of the Idea

The idea occurred to a number of progressive lumbermen in this territory some months ago that there was excessive overhead expense, as well as a great deal of lost motion, in having two separate organizations for the promotion of the welfare of oak and gum, and that, if these were merged into one centralized organization, better results could be obtained in behalf of both oak and gum, through covering a much larger field, and that, in addition to

W. E. DELANEY, CINCINNATI, CHAIRMAN
COMMITTEE OF FOURTEEN

F. K. CONN, CINCINNATI, DIRECTOR.

W. B. BURKE, CHARLESTON, MISS.,
DIRECTOR.

TREASURER—William Pritchard, Pritchard & Wheeler Lumber Company, Memphis.

DIRECTORS: For three years—John W. McClure, James E. Stark, E. A. Lang, M. B. Cooper, R. M. Carrier, F. K. Conn, W. B. Burke; for two years—William Beebe, Roland H. Darnell, Ralph May, T. M. Brown, W. H. Dick, Harry B. Weiss, C. H. Sherrill; for one year—W. C. Bonner, B. C. Tully, A. S. Johnson, Rudolph Sondheimer, W. A. Ransom, W. G. Sparks and C. L. Harrison.

The governing board of the American Hardwood Manufacturers' Association held a meeting immediately following adjournment of the organization meeting and ratified the choice by President Jurden of the following gentlemen as members of the executive committee: All have accepted service.

R. M. Carrier, Carrier Lumber & Manufacturing Company, Sardis, Miss.; B. F. Dulweber, Kraetzer Cured Lumber Company, Memphis; John W. McClure, Belgrade Lumber Company, Memphis; James E. Stark, of James E. Stark & Company, Memphis; M. B. Cooper, Three States Lumber Company, Memphis, and E. A. Lang, Paepcke Leicht Lumber Company, former president of the American Oak Manufacturers' Association, Chicago.

The board also elected John M. Pritchard, secretary of the Gum Lumber Manufacturers' Association since it was organized four years ago, as secretary of the new association. He was given leave

this, other hardwoods, not contemplated in the plans and scope of the two associations, could be advertised and stimulated in a way that had never been accomplished or even attempted.

This idea led to the creation of the committee of fourteen, composed of seven members from each of the two old associations, and the latter worked out all the plans looking to the merger and looking to the manner in which the work of the new association should be carried on through departments organized in behalf of any wood in which enough of the members of the association are interested to justify such a course.

The committee of fourteen did its work so thoroughly that its report received the unanimous endorsement of the membership of both associations and the new organization, the American Hardwood Manufacturers' Association, stands an accomplished fact.

Strong Popular Spirit Behind Movement

And it may be noted in this connection that there is unusual enthusiasm regarding the new association among both officers and members. They believe that its establishment marks a distinctly new era in the hardwood lumber industry of the country; that many

problems heretofore unsolvable will be solved with comparative ease; and that the new organization, by the sheer weight of production of hardwood lumber and other forest products on the part of its members, will occupy a commanding position in the hardwood field, and will be able to bring about, in the course of time, the adoption of a uniform standard of inspection.

No Danger of Involving Inspection Question

The question most discussed in connection with the adoption of the empowering resolution was that of inspection. Earl Palmer did not believe that a third set of inspection rules should be established, declaring that the two standards maintained now by the national organizations had cost lumbermen untold sums. Mr. Cooper said that no action was contemplated at present looking to grading rules, and John W. McClure, chairman of the inspection rules committee of the National Hardwood Lumber Association, said:

"The gum association has influenced the inspection of the two national associations. If we co-operate with these bodies we can bring about a uniform standard of inspection. The constitution does not mention or furnish any ground whatever for a third set of inspection rules."

Ralph Jurden also declared that it was the purpose of the new association to be neutral on inspection and to eliminate the ques-

tion to all of us, not alone in a financial way, but also in the time and attention required to keep the work of all of them active. Second, with all of our associations we are not covering fully the field of our activity, as evidenced by a petition presented not long ago to the American Oak Manufacturers' Association that it amend its constitution permitting the gathering of statistics on all the other woods we are manufacturing in this territory.

The Gum Lumber Manufacturers' Association has blazed the way for real association work in this territory. It has demonstrated to the manufacturers of hardwood lumber that association work, properly directed, pays. The success attained for gum by that association made possible the organization of the American Oak Manufacturers' Association, and its first year's activity, just ended, has fully justified the money and effort expended in carrying on that work.

Your committee in the study of this problem can see wonderful possibilities in the amalgamation of the activities of these two associations and the broadening of the scope of the work to include all the other woods manufactured in the territory. It is needless to ask what it would have meant to each of you if during the past year you had been receiving, in addition to the statistics on gum and oak, the same information on ash, elm, maple and cottonwood. Yet we feel that you can have this service, together with numerous other activities that will be helpful to your business, with cost under proportion to the added benefits.

Therefore, after much thought and deliberation, keeping in mind that in the organization of the new association the work for gum and oak as heretofore carried on with such splendid results, should be comprehensively taken care of, we present to you the plans for a new association embodying all the features of the old through special departments, and in addition the permitting of a much broader field of activity.

RALPH MAY, MEMPHIS, DIRECTOR.

T. M. BROWN, LOUISVILLE, DIRECTOR.

W. C. BONNER, MEMPHIS, DIRECTOR.

tion of inspection rules, and the last paragraph in the empowering resolution was changed so as to read:

"Be It Further Resolved, That the efforts of this association shall be exerted toward the bringing about of a uniform set of inspection rules for hardwood lumber."

The committee which nominated R. L. Jurden and the other officers and directors was composed of C. L. Harrison, chairman; T. W. Fry and F. K. Conn.

Report of Merger Committee

The report of the committee of fourteen, which was adopted by both associations, is given herewith:

As you are already aware, this committee was the outcome of a petition to the Gum Lumber Manufacturers' Association and the American Oak Manufacturers' Association by some of its representative members, that a committee be appointed by the board of directors of each association for the purpose of formulating plans for the amalgamation of the two associations.

The underlying reasons that prompted this movement have been, for some time, evident to most of us who have been active in association work in this territory. First, the number of associations that it has seemed necessary for us to maintain because each one was performing a function vital to our business and our industry, has been quite a burden

We have drafted a constitution for the new organization, should our report be adopted by the two associations, and by reading this to you, you will get a clearer conception of our plans.

The essential features are these: The general work of the association will be to administer to all the woods we are manufacturing, in the way of gathering and giving to the membership, statistics and other information of value, and the carrying on of such other general work as will be of benefit to our members and the hardwood industry we represent. For this general work there will be a small general assessment on the entire production of the association covering all classes of membership.

Special work, such as the advertising and promotion of any particular wood or class of production, or any other activity of a special nature, will be handled by special departments under the direct supervision of a governing committee chosen from among the members directly interested in that particular wood or activity. For this departmental work there will be special assessments levied, as provided and safeguarded by the constitution, against those of the membership who are benefited by the special work.

The plan includes not only lumber manufacturers, but manufacturers of other hardwood products from raw material.

You will readily see under this constitution with its departmental provisions that the activities of this organization can be broadened to cover every line of endeavor of benefit to our industry, and that in time this one association will be performing all the functions of the now separate organizations in our territory.

We recommend to you the adoption of this plan, bearing in mind that

the success of any plan will depend upon the full co-operation it receives from the hardwood manufacturers in the territory; and for this we feel that we have little to fear, for we are working with a body of men who have reaped the benefits of co-operation through the gum and oak associations; and with such a nucleus we should in a comparatively short time have in this association practically every hardwood manufacturer in the territory.

It is to the interests of all of you to co-operate and boost.

The Empowering Resolution

The empowering resolution, which was adopted by the membership of both the Gum Lumber Manufacturers' Association and the American Oak Manufacturers' Association, is also given herewith:

WHEREAS, The needs of the hardwood industry in this territory seem to require more comprehensive organization, as evidenced by the petitions that have been presented to the board of directors of both the Gum Lumber Manufacturers' Association and the American Oak Manufacturers' Association, and

WHEREAS, The boards of directors of the two associations have seen fit to recognize the advantages and possibilities in the combining of our association activities by the appointment of a committee of seven from each association to work out the plans and details of such an amalgamation, for presentation to the two associations at their annual meetings, and

WHEREAS, The combined committee of fourteen has worked out a plan

RESOLVED, That we adopt the report of the committee of fourteen, and transfer our individual memberships to the new proposed association at its organization meeting, and after the new organization is perfected, authorize our board of directors to wind up the affairs of this association, all dependent, however, on the perfecting of the new organization. Be it further

RESOLVED, That the efforts of this association shall be exerted towards the bringing about of a uniform set of inspection rules for hardwood lumber.

The constitution and by laws adopted by the organization meeting of the American Hardwood Manufacturers' Association, is given below:

R. L. Jurden, president-elect, said, on being escorted to the chair:

"I thank you, gentlemen, for the honor conferred on me. I shall endeavor to conduct the affairs of this association in such manner as to merit the confidence imposed in me. I have accepted the presidency at material sacrifice, but I have done so because I believe this organization will prove the means of accomplishing much good for the hardwood lumber industry and of solving many problems affecting it, including that of a uniform standard of inspection."

There was some discussion of the best method of procedure in making inventories on which the government excess profits tax is to be assessed. C. H. Sherrill asked for information on this point,

RUDOLPH SONDHEIMER, MEMPHIS,
DIRECTOR.

C. L. HARRISON, CAPE GIRARDEAU, MO.,
DIRECTOR.

R. M. CARRIER, SARDIS, MISS., DIRECTOR.

of amalgamation whereby the work for gum and oak as heretofore carried on with such splendid results will be comprehensively taken care of, and

WHEREAS, The proposed plans in addition to continuing our present activities, contemplates an association that will administer to all the woods that we are manufacturing in this territory and the eventual grouping in one association of all our association activities; thus giving us more extensive service with proportionately less cost and energy on our part. Now therefore be it

but the members admitted that there was much confusion among themselves, and that there was a similar condition among the agents of the government charged with levying these taxes.

On motion of B. F. Dulweber, President Jurden was authorized to appoint a committee to have the new association incorporated.

Adjournment was then taken.

Last Meeting of American Oak Manufacturers' Association

The overshadowing feature of the first annual of the American Oak Manufacturers' Association, held at the Hotel Chisca, Memphis, on Thursday, January 17, was the adoption of the report of the committee of fourteen and the resolution submitted by the latter empowering the members of that organization to transfer their membership certificates to the new organization, provided similar action was taken by the Gum Lumber Manufacturers' Association.

Although there was a great deal of discussion regarding the question of inspection rules, this matter was settled to the satisfaction of all concerned, as brought out in the report of the proceedings of the meeting which organized the American Hardwood Manufacturers' Association, and the vote of every man present was cast

in favor of the adoption of the recommendations of the committee of fourteen looking to the merger.

In his annual address, President Lang declared he had no hesitancy in saying that the first year of the American Oak Manufacturers' Association had been most successful because it had accomplished everything it set out to do, had conducted a vigorous advertising campaign in behalf of oak lumber at a cost of more than \$10,000, had paid all of its obligations, did not owe anybody a dollar and had a balance well in excess of \$3,000. He further declared that it had enjoyed a membership growth of 170 per cent, and concluded his remarks by expressing his appreciation of the excellent work done by the officers, the various committees, par-

ticularly their chairmen, including the executive committee, and the members themselves.

Secretary's Report Meaty

J. T. Kendall, secretary, in his report, said that the association had during the year, because of its realization of the need of funds for carrying on its work aggressively, conducted a vigorous membership campaign, with very gratifying results. He referred to the work of the special committees, commended them for their interest and activity in behalf of the association, and said that their work would be outlined in the reports of their chairmen.

He said the information contained in the actual sales reports and inventory of oak on hand had proven of inestimable value to the members, because it had shown them the relations between supply and demand, which must necessarily determine prices and other conditions. He made it clear that the association "does not try to control, and that it has no agreements whatever as to, prices," and that it wants from all its members "all actual sales of oak and the prices obtained on several basic points" for its stock report.

He reported that the association had begun compiling, September 1, a monthly report of "actual sales of oak veneers for the members of the veneer department," and that it had endeavored to take advantage of every opportunity to increase the use of oak and to keep members informed as to new developments. In this connection he outlined what the association had done in the way of taking up the use of oak with the shipbuilders, with the implement manufacturers, the car builders, the metal furniture manufacturers and the builders of motor trucks and other equipment for the government, and in keeping in touch with the various government departments, saying that all the information and inquiries gained in this way were promptly bulletined to the members.

He pointed out that the association received 528 inquiries for oak and other hardwoods during the year and that 36,208,000 feet of lumber had been furnished as a result. If the stock had been in hand as wanted, he said the quantity furnished would have been 75,000,000 feet.

Secretary Kendall said that publication of "Hardwoods for Sale" had been inaugurated in December and that this contained the "stocks of the different kinds of hardwood lumber and veneer members subscribing to this service have for sale," and that it is distributed among about 8,000 consumers each month. The cost of space in this publication is \$10 per page, he said, and added that the mailing list was furnished to each member who used the service.

The report of R. L. Jurden, treasurer, showed that the association had received \$28,836.40 during the year, the largest item being dues of \$26,491.32. He placed disbursements at \$28,152.80, but showed that the net worth of the association on January 11 was \$3,187.84, as confirmed by the report of F. E. Gary, chairman of the finance committee.

C. L. Harrison, chairman of the assessment committee, reported that assessments had been uniformly made on the basis of the cut by each member, from a maximum of 28,844,641 to a minimum of 500,000 feet, and that, so far as the committee had been able to ascertain, "cuts of the members had been conscientiously and honestly reported." He further stated that total assessments for the past year amounted to 317,000,684 feet, and that only two members had failed or refused to submit figures on which to base their assessments. He attributed their failure to lack of appreciation of "the magnificent work the association has done and of the support it so justly deserves."

M. B. Cooper, chairman of the membership committee, reported that 58 new members had been received during the year, an increase of 170 per cent over the figures of 34 last January. He announced the total to be 92 and briefly outlined the active work in behalf of new members done by the committee, the officers and the members themselves that had brought about such gratifying results.

Advertising Fruitful

H. B. Weiss, chairman of the advertising committee, announced that \$12,133.46 had been expended in advertising up to December 1 in magazines of national reputation and having combined circulation for the period from April 1, when the campaign began, to December 1, of more than 2,500,000 copies. He said that a new departure had been the use of space in seven lumber trade journals "with talks to oak manufacturers," and that a vigorous propaganda had been carried on through the mails in behalf of oak lumber among manufacturers of furniture and other products in this country and Canada with such effectiveness that it was a great deal easier to find "a good piece of oak furniture today than it was a year ago."

Mr. Weiss believed that the advertising begun by the association should be continued with the utmost vigor, saying in this connection:

Advertising is your communication line between production and consumption. A break in this line may prove disastrous, and it is necessary to keep this line open to continue effectively the work done in the past.

Other woods in various parts of the country are being nationally advertised. There will be a great sum of money spent as time goes on for the exploitation of various woods, and the best money this association can spend is money for spreading broadcast the story of oak.

Ours is a product that lends itself to more uses, perhaps, than any other wood. It has been known for many years as a dependable wood. Its story is not a new one, but, owing to an apparent lethargy that overtook the manufacturers of oak lumber and owing to the splendid advertising campaigns in behalf of other woods, to say nothing of the vast amounts spent by wood substitutes, the public let oak pass out of its mind. It is up to the producers of oak for selfish reasons, if for no other, to arouse themselves and occupy with their oak product the place that is due them.

In conclusion he asked that the work of the advertising committee be studied by the members, that helpful suggestions be given or that criticism be offered. He thought every member should take a personal interest in the advertising campaign and made a plea to this end.

Predicts Renewed Competition from Japanese Oak at Conclusion of War

W. H. Russe, chairman of the committee on the importation of foreign woods, said that practically the only competition experienced at any time was from Japanese oak, and that this was practically nil now because of the absence of ships for ocean transportation. He predicted, however, that, when peace came again, competition from Japanese oak in the western markets would again become serious, and, instead of agreeing with those who argue that demand for Japanese oak will decline because of the inferior quality thereof, asserted that it will increase to such extent as to practically eliminate American oak manufacturers from the Pacific coast territory. He pointed out that the Japanese oak business was in the hands of Mitsui & Co., who were quite aggressive in enlarging their outlets in both Europe and America, and who, in his opinion, as evidenced by the sawmill inspection trip recently made in the South by their representative, Naotoro Iga, intended to seek the business in the West after the war was over.

Mr. Russe pointed out the fact that, from a transportation standpoint, Japan, in normal times with respect to transportation, is closer to Pacific coast markets than American manufacturers of oak and concluded as follows:

As the tendency is to increase our freight rates to the West coast, our chance of competing with Mitsui & Co. for the trade in that section is practically nil. So long as they sell their product for less money they will control the situation.

How shall we meet this competition? Shall we ask congress to increase the tariff so that duties on Japanese oak will be large enough to offset the higher freight rates we must pay, or should we not, as patriotic citizens, on account of our rapidly disappearing oak forests, ask the government not to increase the tax now imposed, provided the Japanese government reciprocates on goods for which this country seeks a market?

Earl Palmer Makes Stirring Address

Earl Palmer made a brilliant talk on the "War," in which he made the following declarations:

That whatever interest we may take in our own affairs and our personal problems, "the main business of the country is the business of war."

That, when the war began, we were full of enthusiasm and prophecy, but that we had now come to the point where we were willing "to think and not to talk."

That America had thrown off the "vestments of peace and had put on the raiment of war."

That he was glad that the mothers of America, who had been slinging at one time that they did not raise their boys to be soldiers, were today down on their knees "thanking God that their breed had not run yellow during the piping times of peace," and that the "fathers had begun to realize that their sons who began volunteering just as soon as war was declared were months ahead of them in patriotism and loyalty to the government."

That he was glad that America had come into the war, even if at the eleventh hour, and that she had put herself in the way of vindicating her honor and preventing herself from being an outcast among the nations of the earth.

Gives Valuable Sketch of Business Outlook

Sidney A. Linnekin, of Babson's Statistical Organization, delivered a quite lengthy address on "Current Economic Conditions," or, as he termed it, "Anticipating Business Conditions." His forecast was quite gloomy. He held out the theory that the volume of business would probably continue quite large for the next twelve to eighteen months and that prices would remain high because of the big volume of business. He did not believe, however, that the period following the ending of the war would be very bright, declaring there would not be much export demand, and that what there was would be supplied by firms in other countries having better organization than those in America. He thought there would be

a good foreign business in "window glass, low grade lumber and cheap furniture." He feared that plants built to take care of the demand for war products of every kind would not be dismantled when the war was over and that they would manufacture ordinary commercial products and offer them on a low basis. He advised strongly against buying commodities for a long period, saying the time for this had passed.

The only bright feature that crept into his talk was the forecast that the worst had been passed in building operations, and that a fair increase would probably follow in this line. But he nullified this by saying that lumber would necessarily feel the effect of decreased building operations, decreased furniture manufacture and decreased demand from other sources, though this was offset in a measure now by the demand for lumber for cantonments, for ship-building and for other strictly government purposes. And he predicted, in this connection, that, if there were not a material decrease in output or a material increase in consumption along normal lines, prices on lumber would react in the near future. He further declared that the next few months, in the opinion of his organization, offered excellent opportunity for liquidating in lumber as well as other holdings.

Following an address on Association Advertising by John B. Crosby, of Chicago, the report of the committee of fourteen was discussed and adopted, after which the convention adjourned sine die.

Gum Manufacturers in Last Session

The Gum Lumber Manufacturers' Association, practically without discussion, adopted the report of the committee of fourteen, providing for consolidation with the American Oak Manufacturers' Association, without a dissenting vote, at its fourth annual held at Memphis on January 18, and, after having taken this action, ceased to be a separate organization.

Aside from this action, which was taken with enthusiasm by members of this organization, the feature of the fourth annual was the address delivered by John M. Pritchard, secretary of the association but now manager of the Southern Hardwood Emergency Bureau at Washington for the period of the war, on "War Orders for Hardwood Lumber and Their Effect on the Hardwood Lumber Industry."

Interesting Address of President Weiss

In his annual address President Weiss declared that "the fourth annual of the Gum Lumber Manufacturers' Association finds it in much stronger position than ever before and carrying on a work that has convinced the most skeptical of its unqualified success." Continuing, he said:

Born in a time of trouble, it has weathered many storms and has come through with flying colors. Its success is due to the unselfish and splendid work done by its members throughout its life, and I doubt very much if any other lumber association, perhaps any other trade organization in any field, can show the same degree of devotion and interest of its members that our association has shown."

He told of how great a sacrifice the association had made in lending the services of its secretary, John M. Pritchard, to the Southern Hardwood Emergency Bureau at Washington, but said that he regarded it as a distinct compliment that Mr. Pritchard had been selected "as the logical man for such an important position." He regretted that it had been impossible for all the members of the association to attend the meeting at which the request of the government for the services of Mr. Pritchard had been presented, declaring that the "loyalty and patriotism were immense," and that those who participated "pledged not only the services of Mr. Pritchard, but also the services of the association and of themselves wherever they could be used." He thought the members had a right to feel a pride in the selection of their secretary for such responsible work and declared:

"It is a big thing and the country knows where our association stands and knows the spirit that is behind our organization. I am proud of my connection with it."

The report of Secretary Pritchard showed that the past year had been the most successful in the history of the association in all respects except in membership, only 26 members having been added, thus bringing the total to 125. It also showed that the Commercial Rotary Gum Association, which is affiliated with the Gum Lumber Manufacturers' Association, had enjoyed a very prosperous year and that it had 22 members. It further indicated that the association had received inquiries for 38,522,000 feet of gum lumber, all of which had been bulletined to the members, and that the "gum lumber industry is now firmly fixed in a leading position in the hardwood field."

Pritchard Gives Enlightening Information

Mr. Pritchard, in his address, outlined briefly the manner in which the Southern Hardwood Emergency Bureau had been created and the purpose for which it existed, and then spoke substantially as follows:

There is no industry so well organized for taking care of the needs of the government as the lumber industry. The pine people are better organized than the hardwood people. The Southern Pine Emergency Bureau has rendered a big service, with much saving in time and money to the government, in furnishing material for building cantonments, ships and other essentials.

I went to Washington about two months ago to take charge of the Southern Hardwood Emergency Bureau, and I want to correct any wrong impression about its purposes and its functions. There is comparatively little demand through it for hardwood lumber such as you carry in stock. There is a good demand for bill stock for use in the building of ship plants, for ties and for switch ties. But the total hardwood lumber handled through the bureau during the past few months has been about 3,000,000 feet. Some thick stock is wanted for France for use in repairing heavy artillery.

I have had any number of letters from lumbermen wanting to know why they did not receive inquiries. The principal reasons are that too much delay and expense would be involved. It takes most of the time of myself and the office force to answer questions and give advice. We must go where we can get the stock and get it quickly, and lumbermen must have confidence in us.

Business coming through the bureau will not be sufficiently large to keep your plants going. If the orders now being placed were divided all around they would amount to little. The bureau must secure what the government needs on the shortest and quickest haul. It is there for the

purpose of helping the government and as an expression to the government by the lumber trade of their willingness to furnish lumber or timber at their plants whenever it is wanted.

But, while direct orders from the government are small and are going to be small, indirect requirements in the way of lumber and timber and lumber products are going to be tremendous, and you gentlemen should begin to develop your business along such lines as will enable you to take care of these requirements, which may be summarized as follows:

FIRST: Boxes. The demand for these will tax the entire capacity of existing plants to fill them. They are needed to ship food, ammunitions and various supplies to the soldiers of the United States and her allies. This demand is just beginning, but it will grow very rapidly, and every foot of lumber you can manufacture in the way of box material will be needed.

SECOND: Wagon and subsidiary manufacturers, including wheels. The government placed an order for 70,000 escort wagons in August. It has placed another for 70,000 within the past two weeks, and it has also placed one for 20,000 two-wheel wagons. I am told by Mr. Parsonage, representing the vehicle industry, that all manufacturers are participating. But he said they must have the co-operation of the lumber manufacturers in supplying the necessary material, practically all of which had to be bought after January 1.

I am authorized to make the statement that prices on thick oak have not been fixed by the government. These wagons are not made on the "cost plus" plan, but the contracts thereto have been let out at fixed prices. The contractors have used certain estimates for the cost of material beyond which they cannot go, but Mr. Parsonage was unable to give me this price. The buying committee will not buy the materials for these wagons except when the contracting firms are not getting the material fast enough.

THIRD: Handles. The day before I left Washington the ordnance department asked the bureau about handles and said that millions of them would be required, from hammer handles up. The lumbermen will be called on to furnish the necessary material.

FOURTH: Aeroplanes. I have in my hand now a telegram which has just reached me. It is from the signal corps and wants the bureau to compile figures covering firsts and seconds, 2, 3 and 4-inch white ash, 12 feet long and up. There is a big demand for oak, ash, spruce and walnut for the manufacture of aeroplanes to put a big fleet in the air. There are erroneous ideas abroad about how many aeroplanes the government is going to build. I do not know how many, but I know that the quantity will be large. It would be bad policy for the government to give out information on such a topic. A great deal of quartered white oak is going to be needed.

Lumber requirements for the allies will come through the director of lumber, and will be limited to what can be spared and by the ocean shipping space available for its transport. The allies are in the market now for aeroplane stock, principally spruce, poplar and ash.

The foregoing covers the trend of what the government will need. But the big orders will not come from the bureau but from the manufacturers of boxes, wagons, trucks and other government requirements. And the government will not fix any price unless prices for lumber run away and it is necessary for it to take over your plants.

Ordinary requirements are going to have to take a back seat and become secondary to government needs. Demand will therefore be less for lumber for building purposes, for the manufacture of furniture and for the production of many other commodities. Building operations are now only 39 per cent of normal, while the comparatively small demand for flooring is another indication of slackness in building.

There is no antagonism between the Southern Hardwood Emergency Bureau and the bureau maintained by F. F. Fish, of the National Hardwood Lumber Association, but there is more need for two hardwood bureaus in Washington than there is for two presidents. It is proper that the lumbermen should be organized so as to take care of the needs of the government, but it is going to cost a great deal to maintain one bureau, much less two. Rates on rents at Washington have advanced from 25 to 500 per cent, and many of the people coming there to help the government are unable to find places to sleep.

The Council of National Defense has no legal status. It was organized because it was believed that it was vital that facilities should be provided for supplying the government. There are men on the War Industries Board serving the government, presumably at \$1 per day. They are passing on large contracts and have saved the government millions of dollars and rendered a wonderful service. But everything is now being investigated. Your humble servant may be the subject of investigation at any time. The Council of National Defense may be done away with and, if that is the case, the bureau will go too.

You can't be in Washington without feeling what a big thing the government has undertaken, something no other nation has ever attempted, namely, to transport 5,000,000 men across the ocean to put down German Kultur and deviltry. The men connected with the conduct of the war are working long hours and are bending their whole energies toward bringing about a glorious victory.

And it doesn't make any difference whether the bureau is maintained or not, but the attitude of the lumbermen toward the government and the part they will play in helping to win the war are vital and do make a tremendous difference.

The report of F. E. Gary, treasurer, showed a net worth for the association of \$4,415.06. Dues, derived from assessments, amounted to \$39,815, while total receipts were \$41,382.39. The biggest single item of expenditure was \$16,796.54 for advertising.

Reports of Committees

F. K. Conn, chairman of the membership committee, reported 26 new members during the year, with a loss of eight by resignation or otherwise.

John W. McClure, chairman of the assessment committee, made a verbal report. He said that dues amounting to \$39,545.33 had been assessed on 324,809,709 feet of lumber; that the members had responded promptly to requests for production for assessment purposes; that they had reported fairly in all cases and that, in some instances, they had reported more than their actual cut. He said that it was estimated last year that there would be an increase of approximately 50 per cent in production, but that it had been as high as 60 per cent. But he declared that the association had kept the market in healthy position to absorb this increased output and that its services could not be exaggerated.

In his report on uniform costs T. L. Hoskins, chairman of the costs committee, pleaded for more serious consideration of this question, which with constantly more involved conditions surrounding us has from day to day an increasing importance to the hardwood manufacturer. He said that too close application to the lessons taught by standardization of business and improvement of methods could not be given and particularly urged a more thorough research into the influence of stumpage values on all phases of cost and income figuring.

In his report for the advertising committee C. L. Harrison sketched briefly the full process of growth of the idea of advertising gum. He showed how starting with the inspiration of two firms it had grown to a point where it was now covering the whole structure of national advertising media.

The report of the committee of fourteen then came up for action. Its introduction resulted in considerable discussion, as noted in preceding report of the merger session. When put to a vote the report was unanimously adopted and the proceedings adjourned sine die.

Rotary Gum Makers Also in Merger

Members of the Commercial Rotary Gum Association, which is affiliated with the Gum Lumber Manufacturers' Association, held an executive session at the Hotel Gayoso, Memphis, Saturday, January 19, ratified the report of the committee of fourteen, and decided to join the American Hardwood Manufacturers' Association as a body by becoming one of the divisions or departments of that organization.

This action on the part of the Commercial Rotary Gum Association means that it has ceased to exist as a separate organization. It has twenty-two members who will come into the American Hardwood Manufacturers' Association on the divisional or departmental

basis indicated. This action will entitle the rotary gum makers to all the benefits of the parent body, but will leave their particular problems for their own solution.

Ralph L. Jurden, who was elected president of the American Hardwood Manufacturers' Association, has been president of the Commercial Rotary Gum Association during the past two years.

Members of the American Hardwood Manufacturers' Association have expressed themselves as much pleased with the action of the Commercial Rotary Gum Association, the first organization, aside from the Gum Lumber Manufacturers' Association and the American Oak Manufacturers' Association, to join.

The "Alluvial" Meeting

The Southern Alluvial Land Association, at its first annual at the Hotel Chisea, Memphis, Wednesday afternoon, January 16, honored all of its old officers with re-election, as follows: John W. McClure, president; A. C. Lange, first vice-president; W. E. Hyde, second vice-president, and J. M. Pritchard, treasurer.

It also elected all of the one-year directors to serve for a term of three years, as follows: S. B. Anderson, F. K. Conn, Thomas W. Fry, S. M. Nickey and S. E. Simonson.

President McClure extended greetings to all present immediately after the delightful luncheon and expressed much pleasure over the fact that so many members had braved the elements and the difficulties of transportation. He then read his annual address, in which he asserted that the association, about a year ago, was launched at a most opportune time, because, owing to the entrance of the United States into the world-wide war, the production of food and clothing had become of paramount importance and because the southern alluvial lands represent the largest undeveloped body in this country capable of producing vast stores of cattle, hogs, foodstuffs and clothing.

President McClure reported increasing demand for these lands and predicted that the association stood at the threshold of the greatest "migration period" in the history of America and that it would witness the biggest "back to the farm" movement ever seen, with resultant quickening of the development and cultivation of these properties. He pointed out that the war had been something of a stimulus because of the need of increased foodstuff production, but that it had also proved itself a handicap in the respect that it had rendered labor much scarcer and had created a larger demand for cultivated than for "wild" lands.

He thought it proper that the association should have been launched by lumbermen and that the task of getting it started had been borne by them, but he believed the time had come when farmers, bankers and others who profited by the publicity and advertising done by the association, should become a part of the organization and thus strengthen its finances and enable it to do a much broader work than it has done during the past year. In this connection he emphasized the fact that while the owners of these alluvial lands were largely lumbermen at one time, they are now both farmers and lumbermen.

He paid a tribute to the patriotic spirit in which members of the association responded to the call of the government for increased foodstuff production and declared that the association would continue to offer its services to the government and that it would assist to the best of its ability in carrying out the plans of the authorities during the period of the war. He then outlined the purposes of the association as follows:

"To advertise the wonderful possibilities of our rich alluvial territory; to overcome prejudices which may exist in this section; to give publicity to the rapid developments taking place; to give accurate and reliable information whenever called upon by new settlers or by those desiring to locate in the alluvial region; to assist in building up communities and improving farming conditions in this territory; to co-operate with other forces operating for the development of these lands, and to furnish our members with information valuable to them either in disposing of their lands or in their agricultural development."

Secretary F. E. Stonebraker, in his report, stated that 27 new members had been received during the year and that the total membership was now 44.

He reported that thousands of letters had been mailed soliciting members and their active co-operation in the affairs of the association and that, while most of the replies had been highly favorable, the results had been somewhat disappointing. He also paid tribute to the patriotic spirit of members of the association, saying they had, in response to the appeal of the government, planted thousands of acres to corn and other foodstuff crops originally intended for cotton.

He briefly reviewed the work of the year aimed at aiding in the development of the alluvial lands of members and in disposing of properties they wished to sell. He pointed out that farming opera-

tions on these lands had proven highly profitable and that splendid results had been achieved despite scarcity of labor and other handicaps, including unusually early frost in the northern Mississippi valley and the presence and activity of boll weevil.

He reported that cut-over and cultivated lands had advanced steadily and regularly during the year but that, despite these higher prices, they offered splendid returns on the money invested in them. He described advertising and publicity as factors which had greatly contributed to the development of these cut-over lands and referred to the "Call of the Alluvial Empire," a booklet issued by the association, as the most sustained bit of publicity work undertaken. He reported inquiries for this from all parts of the country and even from the Philippine Islands, and said that thousands of copies had been mailed to prospective settlers and others in every part of the United States. He thanked the lumber trade journals, the newspapers, the railroads, the agricultural colleges and all other agencies which had lent their aid along publicity or other lines.

He forcibly outlined the steps being taken by Georgia, Alabama and other southern states in confirmation of the view that the "farming tide is turning toward the South," and concluded his report with the following eulogism on alluvial lands:

"Tennessee, Mississippi, Arkansas and Louisiana alluvial land is unquestionably the richest soil in the United States. When properly managed, the most enduring form of wealth is real estate. The most profitable real estate is farm land, and the best farm land in the world is the alluvial land. Now that we know that we of the South have the best large body of alluvial land in the world, it is certainly up to us to let the world know about it, to bring more of the world here to assist in continuing the rapid development already begun, thereby developing the best soil into the most beautiful country in the world."

The report of the treasurer, John M. Pritchard, was read by Secretary Stonebraker, in the absence of the former. It showed the financial condition of the organization to be wholly sound.

Gov. Charles H. Brough, speaking on "The Dawn of a New Constructive Era," elaborated on the wonderful resources of that State in apples, peaches, anthracite and smokeless coal, diamonds, cottonwood, ash, gum and other hardwoods, and reviewed briefly the steps taken by the authorities of that state to hasten the dawn of this era, including a constitutional convention to enable various divisions of the state to issue evidences of their own indebtedness, making large appropriations for building good roads and using convict labor in this work, putting the state on a cash basis without increasing taxes, taking the institutions of higher learning out of politics and keeping them out, and placing a check on vicious and conflicting local and sectional legislation.

He declared that Arkansas wanted to join hands with the association in developing over 5,000,000 acres of alluvial lands within that state and in helping to bring about the settlement and cultivation of the 20,000,000 acres of such lands in the lower Mississippi valley. He said they offered climatic conditions which made double crops possible and that they were the richest lands in the world; that they were situated within easy reach of markets not only in this country, but also in Europe, because of their location with respect to seaports. He asserted that the gold hunters had passed these lands by in olden times because they were covered with a heavy timber growth and could not be cultivated until the timber was removed, but he declared that, out of the 76,000,000 acres of cut-over lands in the United States, only about 15,000,000 are not subject to second timber growth, and the greater portion of the latter lies in the alluvial regions of the South.

He regarded the coming of boll weevil, with their depredations, as not an unmixed evil, because they had forced upon southern people realization of the fact that the one-crop system is deleterious to any region and that diversification is absolutely necessary if they are to be self-sustaining and if they are to stop the inflow of millions

Veneer Panels in Airplanes

Reasons Why Mahogany Is in Such Great Demand and High Repute

 IT DID NOT TAKE the veneer panel long to prove its superiority over cloth in the construction of airplanes. Originally the planes or vans which sustain the weight of the machine and enable it to sail through the air were covered with cloth. Cotton was one of the first materials, and light tent cloth was considered sufficient. Then, as greater strength was required, linen cloth came into use. Information is not at hand at just what period veneer panels were first tried and found satisfactory as a substitute for cloth, but everything is recent in airplane construction, and two or three years count for a great deal.

During the first year of the European war, that is, in 1914 and the first half of 1915, one of the most troublesome contraband articles to keep out of Germany was linen cloth, which was in great demand for airplanes. It was smuggled into Germany in all sorts of ways. It was printed to make it look like cheap calico or some other innocent material, in hope that it would escape identification when passing through the blockade.

This serves to show how rapid and how recent the change in material has been brought about. Perhaps linen cloth is still used as covering for planes of certain kinds, but the principal material is now wood. The planes use veneer panels in place of cloth. These panels are three ply and are made of mahogany in most instances. That wood has special qualities which fit it for that service better than any other wood that can be procured. The panels may be of different sizes, but a common size is four inches wide and five feet long. These are joined edge to edge to constitute the plane surface. Skillful devices are in use to fasten the panels edge to edge. The work must be done in a substantial manner, for these panels sustain the weight of the machine and its load, perhaps a thousand pounds. The motor drives the machine forward at amazing speed and the pressure of the air, striking the under surface of the plane, sustains the load. Should a panel break or split, the airplane would plunge to earth; and the importance of having panels reliable in all emergencies is apparent. The air strikes the underside of the plane with an impact equal to that of a wind blowing from 100 to 150 miles an hour, and it can be easily understood that no flimsy material will stand that strain.

Mahogany panels are the preferred wood for battleplanes. It is only moderately heavy, is very strong and hard, and its holding power on glue is so great that a panel of this wood is hard to tear to pieces. It is dependable, and that is what is wanted, above everything else, in a battleplane. Every possible precaution must be taken against breakage.

Failure under air pressure is not the only danger to be

guarded against in a battleplane. It is expected to pass through showers of bullets, not only from machine guns, but from guns of larger caliber. Sometimes dozens of projectiles pass through the planes in a single fight. Suppose each bullet tore off a splinter in passing through the wood. The panels would be riddled and the machine would collapse.

That is the reason why mahogany panels are preferred above all other woods. Mahogany does not split and splinter when struck. The bullet cuts a hole through barely large enough for its own passage, and that is the extent of the damage. A large number of bullets must strike a plane before the panels are destroyed, if splintering can be guarded against. The panels are three ply, the outer sheets at least of mahogany, and perhaps the inner also. The middle sheet has its grain at right angles to the grain of the outside sheets as an additional precaution against splitting.

It is of historical interest that war vessels for the ocean a century or more ago were built of mahogany, or at least were lined with mahogany planks, as a precaution against flying splinters when cannonballs passed through the vessel's sides in battle. In a sea fight when low-power, smooth-bore cannon were used, more damage might be done to a ship's crew by flying splinters and billets of wood torn from the planking than by the cannon balls themselves. The use of mahogany lessened that peril; and now, when airships engage in battle, the same non-splintering wood is employed, as of old, to lessen the danger from splinters. In the old days, mahogany timbers a foot thick were demanded for the fighting ships; but now it is the three-ply panel about a quarter of an inch thick. It is a wonderful wood and no one can guess to what war use it will be put next.

The Ahnapee Veneer & Seating Company, Algoma, Wis., distributed about \$7,500 among its employees at the beginning of the new year as a bonus upon its 1917 earnings. The payment amounts to 12 per cent of wages received during the year. Four years ago the Ahnapee company decided to permit its employees to share in the profits and in that time the dividend rate has grown from six to twelve per cent.

For the purpose of increasing its operations in Tennessee, the Kentucky Veneer Works of Louisville, Ky., with an authorized capital of \$100,000, has applied for a charter licensing it to do business in Tennessee. The incorporators of the company are: H. M. McCracken, F. I. Brown, M. E. Freedman, W. Geiger and F. C. McCracken.

At St. Louis, Mo., the Western Veneer Products Company has been incorporated.

The Talbert-Zoller Lumber & Veneer Company is closing out its business at Cincinnati, O.

Picture Frames as Veneer Market

Present Demand for Veneered Work Light, but
Expansion Is Looked For

THE picture frame industry is not usually looked upon as an important market for veneered work, and compared with big trades like furniture and cabinet making, it is, of course, relatively unimportant. But this does not alter the fact that there are hundreds of plants making picture frames, supplying the thousands of stores engaged in selling pictures, frames and art goods generally, and that the value of their annual product is 'way up in the millions.

Hence the veneer manufacturer, together with the man who sells the glued-up work direct to the frame manufacturer, is interested in this business, which contributes materially to the volume of sales. The trade is one which has its ups and downs, its peaks and valleys, perhaps to a greater extent than most lines, the explanation for this being that pictures and frames are things that the general public can get along without much more readily than it can get along without food and fuel, for example. Hence, at the first sign of untoward conditions, demand for frames falls off, and with it goes the demand for veneered work.

Inasmuch as furnishing homes involves use of pictures as well as furniture, it might be supposed that the frame business would move along parallel lines with the furniture industry. This is true to a limited extent, but it appears that the frame business is much more responsive to the ebb and flow of demand than the furniture business. One reason for this is that it takes a lot longer to make furniture than frames, and hence furniture dealers have to look further ahead in buying than the picture and art trade. The result of this is that it takes longer for unfavorable general conditions to make themselves evident in the furniture business than in the manufacture of frames.

In fact, this trade is so sensitive that it occurs to the writer that it might be watched as the barometer of business instead of pig iron and other time-honored products, which have been relied upon heretofore. Now that the war, by introducing price-fixing by the Government, has interfered with the customary use of these accepted barometers, the frame trade ought to be considered as reflecting the way things are going generally.

The frame business parallels the furniture trade in another way: it responds to style influences furnished by the makers and buyers of furniture. Wood frames must harmonize with the material of which the furniture of the room is made. At least an effort is made to bring this about, and that explains why mahoganized materials are popular in the frame trade today. Comparatively little real mahogany is used, the frame makers apparently fearing that costs would be too great, though in the opinion

of the writer, this idea is considerably exaggerated. At any rate, birch is the favored material for mahoganizing purposes, and is consumed by the frame manufacturers in larger quantity than any other wood.

Though walnut has been popular in the furniture business for several years, it has not yet forced its way into the frame business, possibly because the walnut veneer and lumber people have been too busy with other and larger business to make a special effort to encourage the use of this material by picture frame manufacturers. It would seem that the time is ripe for its introduction, since, as suggested, frame makers are always interested in putting their own designs in alignment with conditions in the furniture field, which is depended upon to furnish suggestions for such changes.

The frame manufacturer does not buy his veneers and do his own gluing up, but purchases three-ply stuff in quantity from the concerns handling this work. The face is, of course, the only piece which must be of clear material, as it must be finished and made to furnish an attractive setting for the picture which it is to contain. The manufacture of frames without waste is a problem of the business, while finishing the edges of the veneered frame so that the glue-joints will not show is another feature which gives the practical men in the industry something to think about during their idle moments.

As a matter of fact, the demand for veneered frames, and hence for glued-up stock for use in making them, is less just now than for some time. The trade has not been calling for this material with any degree of eagerness, and while some veneered frames continue to be made, the situation is not regarded as anything like normal. However, there is no telling when it will be restored to normal figures. The whole frame industry is in the dumps just at present, and perhaps when the business picks up and business of the usual volume is restored, veneered frames will again be a featured line, and the veneering business will get the benefit of the change.

"I believe in the future of the veneered frame business," declared a New York sales agent, who handles the products of six large Chicago frame factories in the metropolitan district. "I like veneered frames, because the advantages of veneering are nowhere more evident than in this line. That is, it is possible, by means of carefully selected face veneers, to get effects which would be impossible in any other way. Consequently there is real basis for the popularity which veneered frames have enjoyed heretofore, and which doubtless will come back to them again in the not distant future.

"The real trouble just now is that the picture frame business as a whole is off. Dealers are not buying, and

"Hartzell's Choice Walnut"

This is not a city park, but the entrance to our property at Piqua. It is a reflection of our policy of care in manufacture.

CARE IS OUR WATCHWORD

The Walnut log is too valuable, its product too full of possibilities of beauty to hazard through inattention to all the finest details of manufacture.

But one must know where these details lie before he can cope with them. We have had thirty-six years of constant experience in locating the wrinkles of successful manufacture. Undoubtedly there are some we have yet to discover, but we can truthfully say we have mastered our art,

CHOICE WALNUT EXCLUSIVELY

manufacturers are finding it difficult to keep their plants going. There is seldom any disposition on their part to manufacture a big supply of frames for stock, because of the possibility that the trade may change its views regarding the desirability of certain lines. Hence when business gets dull the manufacturer usually jumps on the train, goes to a big market where he knows there is a chance to get some large orders, and cuts his prices deep enough to get them. Then he goes back to his factory and turns out the goods, hoping in the meantime that conditions will become favorable enough to enable him to run without having to take business at the reduced prices.

"This is not an ideal condition, of course, but that is the way it has been in the frame industry. Consequently there is not much of a supply of veneered frames on hand, nor have the frame makers been going into the market for large quantities of three-ply stuff. On the other hand, they have been buying from hand to mouth, making up frames just as they saw the business in sight, and as the trade has not seen fit to put the loud pedal on veneered goods, these have languished even more than the regular lines.

"My personal opinion is that the veneered frame can be restored to popularity. In fact, as a result of this conversation, I am going to suggest to the manufacturers and the dealers as well that more attention be paid to veneered frames. The public has not been told much about these goods—though for that matter little educational work has been done on the subject of picture frames

in any way—with the hope that greater appreciation will be developed for them. It would take only a little effort along this line to bring about a decided stimulation of interest in and demand for these frames, with a correspondingly good effect on the manufacture of veneered and glued-up stock for this business."

The same authority, who has been selling picture frames for years, and has the confidence of the largest factors in this trade, said that the frame business has suffered from lack of educational publicity. It takes a run of poor business, such as that which is being experienced at present, he contended, to make these manufacturers think seriously about getting the public interested in their products. Consequently, he suggested, now is a good time to take this question up again, with the idea of starting something along the line of educational promotion work, so that the public will be more inclined to study pictures and frames, and to give a larger share of attention and financial support to this industry.

"Several years ago," he said, "the industry undertook a campaign of this kind. That is to say, it was discussed, and many of those in the business favored going to the public with our story. The idea was launched at a meeting of the Chicago manufacturers, who at that time were suffering from lack of business, and who appreciated the advisability of undertaking some sort of work that would help to increase the volume. It was agreed that factories would be assessed on the basis of their production, and that this would create a fund which would enable the frame business to be advertised on a modest scale. The details of the campaign were not worked out, but it was agreed that the educational and esthetic value of pictures would have to be featured, even more than the frames, which, after all, are incidental. Getting the public interested in pictures was to be the big idea.

"However, while the frame makers were preparing to work out a plan of this kind, business picked up, the demand became brisk enough to keep all of the factories working full time, and the idea of promotion was dropped as unnecessary. Now that the trade is slow, it may be taken up again, with better chances for success."

The lack of building, which is hurting a lot of collateral lines, is doubtless to blame for the situation in the frame industry at present. The chances are that when residence construction picks up, involving the purchase of new furnishings of all kinds, picture frames will get their share of the expenditures. At that time the veneer and panel makers will feel the stimulation, but it is doubtful whether the requirements of veneered frames will make much of a dent in the supply of thin stuff as long as the general situation remains unfavorable.

G. D. C., Jr.

A notion prevails in some quarters that a wood should be soft in order to be desirable as a source of veneer. While a soft wood may be manufactured more easily than a hard one, the ease of working a wood is not the test of its value as a source of veneer. Ebony is one of the hardest woods, yet the piano maker produces some of his finest work by means of ebony veneer.

Veneer and Panel Committee Is Busy

E. R. Morrison, one of the members of the war service commis-
 sion of the veneer and panel industry, sends in the following inter-
 esting information covering the work of that committee:

The war service committee of the veneer and panel industry
 reports great success in the work it has undertaken. There seems
 to be a disposition on the part of every manufacturer to come in
 and not only do his bit but do his level best to aid the government in
 winning the war. There is also a fine spirit of co-operation shown
 in the different departments at Washington.

Mr. Lord and Mr. Gorham have been called to Washington to
 take up matters of vital importance to the work in hand by prom-
 inent government officials.

However, there seems to be some misunderstanding as to the
 scope of work it will be necessary for the panel and veneer manu-
 facturers to do in the aircraft division alone. The figures are so
 large that they startle one and it is earnestly urged that every
 manufacturer, no matter how large or how small, send his name,
 unless he has already received a questionnaire, to the War Service
 Committee, 1500 South Western avenue, Chicago, Ill.

From a standpoint of self-preservation alone, if one can be lack-
 ing in patriotism at this time, every manufacturer should join this
 committee. If they do not take care of the government needs,
 manufacturers in other lines will, particularly the lumbermen of
 the south, who own their own stumpage. They may install veneer
 machines to handle the government orders and it is quite evident
 that the lumbermen are fully awake to the seriousness of the situ-
 ation. This might not interest the industry at this time, but if
 these lumbermen equip their plants to handle the work, they will
 become very strong competitors after the war. However, an
 appeal to your selfish interests at this time is not to be considered.
 It is up to everyone to give every aid to the government for patri-
 otic reasons alone.

The idea of doing your bit is not going to help very much. That
 was the slogan that England started on and England was almost
 whipped before she discovered that doing one's bit would not win
 the war. When they awoke to the seriousness of the task, they
 knew that it meant devoting every effort, all its energy, doing its
 utmost, and now we are on the road to victory.

The members of the committee are devoting their time to this
 work without remuneration, and in a spirit of enthusiasm. The
 work has grown so tremendously that it demands the attention of
 two or three of the committee at all times.

The expense of the office, in which a growing force is required,
 is taken care of by a small assessment levied upon the manufac-
 turers according to the amount of their output.

Perkins Glue Company Wins Out in Final Appeal

The following decision has just been handed down by the U. S.
 Circuit Court of Appeals covering suit of the Solva Waterproof
 Glue Company. The case was tried before Circuit Judges Kohl-
 saat, Alschuler and Evans. Judge Kohlsaat delivered the opinion.

The case was originally decided by the district court in favor
 of the Perkins Glue Company in June, 1915. An appeal was taken
 which was argued in January, 1917, and has just been decided.
 The court of appeals criticises some of the ways of claiming the
 invention that were brought before it, and reverses the lower court
 as to them, but it sustains as valid and infringed the claims for the
 Perkins glue as a product and for the process by which the Perkins
 glue is made.

The Court held that the Solva Waterproof Glue Company, the
 Burch-Kane Company and Burch and Kane had infringed, although
 they had merely sold the dry glue material and left their customers
 to make it up into Perkins glue.

The decision makes it clear also that the manufacturer who
 mixes up such dry glue material into Perkins glue and uses it is
 liable as an infringer.

The following are excerpts from U. S. circuit court of appeals
 opinion:

The question is thus narrowed to the following propositions: (1) Was the glue of the patents new? (2) Does the process constitute a valid invention?

It is true (1) that the adhesive of the prior art patents, although adverted to in those patents as glue, was never placed on the market as a substitute for animal glue or otherwise; (2) that prior to the patents in suit, while its location on the line of starch adhesive products was pointed out, nobody actually rescued the glue of the patents from its undeveloped state.

From the evidence it appears that there was a demand on the market for starch glue as good as animal glue and suitable for veneering, and that appellee had built up a large business in that article; that the claims of the prior art patents, except the Brueder French Patent No. 114,978, aforesaid, all were in fact limited to pastes, sizings, mucilage and other weaker forms of adhesives; that appellee's process was not so evident as to be discovered by appellants without subsidizing appellee's employees; that there seems to have been great difficulty in getting at the correct formula; that Perkins labored years to get the latter just right; that, as stated by his expert, Carmichael, "He proportioned the various steps to one another according to the selection of raw material, in the conversion of the raw material and in the solution of the material, being particular about the various sub-steps by which, in the main step effecting the solution, he obtained a uniform and homogeneous product." All these, considered in connection with the presumption arising from the grant of the patent, lead us to hold, though with some hesitation, that the claims covering the finished glue product as well as the process claims for that article are valid and should be sustained.

We hold that appellant, the Solva Glue Manufacturing Company, was a contributory infringer of the final product and of the final process. The rule of law in such case is that one who makes and sells one element of a patented combination with the intention and for the purpose of bringing about its use in such a combination, is guilty of contributory infringement, and is equally liable with him who organizes the complete combination.

Hydraulic Press Company Moves into New Building

The Hydraulic Press Manufacturing Company of Mt. Gilead, Ohio, reports the completion and occupancy of its new factory. The new building puts the company again in full operation. The new equipment represents the most advanced types of metal working machinery available and is especially adapted for the building of hydraulic presses, pumps and valves.

THE AMERICAN ARMY ARRIVES

The Kaiser stands on stormy banks
And casts a curious eye
Across the fields where planes and tanks
Spread over earth and sky.

He says to Hindenburg, says he:
"I guess we better scoot
Before dot million men we see
Come close enough to shoot."

"Yourself und Gott iss strong enough,"
Von Hindenburg replies;
"Shvell up your chest und give a puff
And blow dem back like flies."

"Puff and be damned," the Kaiser spoke
In wrath; "Now vot's der use
To make dis business out a joke,
Ven hell iss all broke loose?"

A Modern Machinery Plant

A machinery plant, modern in every detail, where every consideration is given to the comfort and convenience of the men, is that of the Philadelphia Textile Machinery Company, manufacturer of the well-known Proctor dryers, used in the veneer industry. The plant is located on high ground at Sixth and Tabor road, Philadelphia, where the workmen are surrounded by fresh air, light and sunshine, and the most healthful conditions. This requisite has really been foremost in the minds of the executives, as they contend a satisfied, healthy employee is always a paying asset in maintaining production upon a proper scale and of the highest grade work.

The buildings are rather of a colonial type, brick and concrete. A large and spacious building of two stories is devoted to the offices of the firm, with private reception rooms, conference rooms, etc., on the first floor. On the second floor is a large, well-lighted drafting room, with windows on all four sides, and drafting tables placed at the windows. Venetian blinds are used which, while shutting out the glare of the sun, will admit perfect light for the men's work. This department also includes a dark room with every facility for photographic work and a blueprint room with an electric blueprinting machine. In the basement of this building is a large vault in which are preserved the important papers, contracts and records, and also the various supplies for the offices. The

work is progressing, while it also facilitates production by providing each man with specially assigned work.

Among the features of this modern and complete shop is an enclosed room for the emery grinding machinery, equipped with suction tubes to remove the dust as it flies from the wheels; another is the installation in various parts of the floor of filtered drinking fountains. Three service rooms are placed at convenient spots in the shop, while in one corner of the basement is a locker room, with wash room, and also shower rooms; a lunchroom, where meals are provided at a low price. A large bulletin board is installed for important announcements for help.

An experimental department is also a feature of the shop, where the company is ever trying to improve its equipment. Tests are being conducted of the various types of dryers built by them, and the effects secured under varying conditions, with every facility for recording the most delicate changes of temperature or atmospheric conditions. A systematic method of storing materials and parts until required is adopted, which prevents any lost time because of delay through depletion of needed supplies. The plant is operated by electric power, leased from a public utility company. However, a small power plant is installed for heating and steam for experimental work. This is equipped with a 250-h. p. Badenhausen boiler.

MODERN PLANT OF PHILADELPHIA TEXTILE MACHINERY COMPANY.

Taylor system is used here for keeping track of these various stocks in a systematic manner, preventing confusion or uncertainty as to supplies.

The manufacturing plant proper is a building 270x280 feet. Located upon the Philadelphia & Reading railroad there are excellent shipping facilities. A siding 280 feet long runs into the plant for its full length and thus permits the loading and unloading of machinery indoors. A track scale of 100-ton capacity is installed for weighing shipments, while a two-ton traveling crane is placed over the siding to handle the heaviest loads with the greatest ease.

The floor of the shop is laid with hexagonal wooden blocks treated with creosote; one side of the block is shorter than the others, which is designed to preserve an even pressure and to prevent the blocks from being forced upward and presenting an uneven surface. This type of floor has been found to be very easy on the feet of the men. The building is one story in height with a saw-tooth roof with skylights. The glass sides of the building, in conjunction with this skylight, insure plenty of good, natural daylight distributed in such a way there are no shadows in any part of the building. The roof is without horizontal cross beams in the clear, which also insures perfect lighting and no interference from above with handling heavy materials.

Everything in the manufacturing operations of the plant is planned in a most systematic manner. As the materials are unloaded on the receiving platform at the one end of the plant they are stacked in the proper bins at that end; from these points they are routed down the floor of the shop on one side through the various stages and brought back along the other side where the various finished parts are assembled and the machinery put together for testing before being taken apart for shipping. The equipment of the shop is of the latest improved types, of the most complete character for handling the varied operations entering into the construction of the machinery. In the center of the shop there is what is known as the planning room, where the various jobs are routed as they come in and are listed under the name of the man in charge of that particular work until it is completed, when another job is assigned to him. This method enables the men in charge of the various departments to know exactly how the

The efforts of the company to provide for the convenience and comfort of its men have thus been rewarded; it is confident that this new and modern plant, with its skilled and satisfied labor, must needs be reflected in its product, which must necessarily secure a still greater efficiency for its customers.

Philippine Mahogany

Woods are being marketed in the United States under the name Philippine mahogany. Though no true mahogany has yet been found in the islands, those bought and sold as such are both beautiful and useful. The boundary line between certain trees that are mahogany and certain others which are not, is so uncertain that abundant ground for controversy exists.

The two Philippine woods which most frequently sell as mahogany in the United States are red lauan and tanguile, both belonging to the shorea genus. These names mean little to the people of this country. In the Philippines red lauan is chiefly used for light and temporary construction, concrete forms, dugout and other light boats, interior finish, flooring, dry measures, and cigar boxes. It is not durable when exposed to decay, and in the Philippines is liable to attack by boring insects. In color it is pale red to dull reddish brown. In weight it ranges from light to moderately heavy, soft, coarse, straight-grained, and easy to work. Trees attain large size.

Tanguile has practically the same uses in the Philippines as red lauan, and is similar in durability, but its grain is firmer. It is easy to work. In some regions it is abundant. At home it sells at from \$30 to \$40 a thousand.

As far as reports have been made, these woods have given general satisfaction where they have been used in this country. The colors of the wood of tanguile differ among themselves in a remarkable degree, in different parts of the islands. Apparently local soil and climate control the color. Some is bright clear red, other pinkish brown.

(Continued from page 27)

of dollars' worth of foodstuffs and other commodities from outside sources. He believed the association would help in checking this import movement into the Southern States despite the labor situation and other handicaps.

He declared that if the men remaining at home work 28 minutes longer per day than heretofore, they would more than offset all the loss of labor resulting from voluntary enlistment of thousands and the drafting of hundreds of thousands of men into the United States army. He also advocated introduction of machinery that would enable one negro left behind to do the work of two who had gone to the front.

Governor Brough also strongly favored drainage, saying that it had increased the value of cultivated lands 66, and of uncultivated lands, 69 per cent, and that it had also increased the rental value of cultivated lands 59 per cent. He urged elimination of cattle tick and said that Arkansas was following the lead of Alabama and Tennessee in this and that it had imported 15,000 head of thoroughbred cattle within the past nine months. He also strongly advocated the establishment of experiment stations to deal with crop rotation, seed selection and other practical matters, and expressed the conviction that the flood-control bill had settled the flood problems of the alluvial lands of the Mississippi valley. He believed strongly in federal appropriations for levees, declaring that "if the government is justified in spending millions of dollars for reclaiming arid lands of the West and Southwest, it is more than justified in spending millions to prevent overflow of the alluvial lands, the richest in the world."

Governor Brough discussed the "Dawn of a New Constructive Era" in its larger aspects as applied to the war. He said official Washington believed the present world war would last a minimum of three years, and possibly five to ten years. He said Germany, in some respects, was stronger than three and one-half years ago, notably in the foodstuff area she controls and in the resources she is getting from occupied territory in the way of minerals and other essentials, but he predicted that the allies and America would win a glorious victory. He declared that Germany was the only nation in the world that had organized for war and that had taken stock of its man power, but that the questionnaires now being filled out throughout the United States were not for the purpose of securing men for the army, but for the purpose of taking a census of the man power of this country so that men might be assigned to the work to which they were best suited, thus eliminating "round men from square holes" and "square men from round holes." He believed that the inventive genius of the American nation and of the allies far surpassed that of the central empires and told the association that a bomb had been invented by a Pennsylvanian that would destroy everything in an area of half a mile and that Edison had a new device for combating submarines. He arraigned German "Kultur"—K for kill, U for U-boats, L for lies, T for treachery, U for unfaithfulness and R for ruthlessness—and told of the prayer the Germans were wont to pray looking to their world supremacy through the destruction or subjugation of their enemies.

"We will win through the very genius of the American government," he declared, "but the war will not be won by any single battle or any series of battles, but only when the war has been brought home to the German people and they have been given some inkling of what force and frightfulness and ruthlessness and inhumanity and cruelty mean as applied to themselves."

He urged that American business men support the government by buying Liberty bonds and war thrift stamps and in contributing to the Red Cross and other patriotic funds, and thus help to overthrow the militarist party in Germany and to bring about the dawn of a new constructive era of "Peace on earth, good will to men." He also emphasized the fact that there were only 25, and, in some instances, only 15 per cent of the alluvial lands of the Mississippi valley in cultivation, and that by cultivating all of these lands and developing them as they should be, the food problem now confronting the allies could be solved, another long step in the direction of hastening the dawn of this new constructive era in its larger and broader and weightier aspects.

Governor Brough received a tremendous ovation when he had finished.

Prof. J. W. Fox, Scott, Miss., one of the most able agricultural experts in the South, told members of the association that they had the richest lands in the world—lands that would, with proper treatment, remain unimpaired as to fertility and productiveness for a hundred years—and that, if they lived on their properties, farmed them with intelligence, used up-to-date methods, intensive cultivation and seed selection, they had nothing further to fear from boll weevil.

"I do not believe that any of us realize the richness of delta lands," he said. "These alluvial lands in the Mississippi valley represent the greatest farming area in the world because they have more plant food—lime, phosphate and potash—than any other section in the United States. Their texture makes them susceptible to good farming and they respond readily to cultivation. But the thing that makes them greater than anything else is the fact that, by rotating crops—planting corn and peas each year on one-third of any given tract—you can farm it one hundred years and still have it as rich as when you began. And this process itself is profitable because the rotation crops can be sold at good prices, a condition not true of lands in the Middle West which are worth \$150 an acre."

"I have had seven years' experience with boll weevil. I made no predictions before I had experience with them, and I do not now want to minimize the boll weevil menace. It is pretty severe. I have seen land reduced from \$150 per acre to \$30 to \$40 per acre, which shows the fearful havoc of which they are capable. But this havoc was all unnecessary, was caused by panic and was inexcusable. Where bankers have stood by the farmers they have weathered the storm. All lands in Washington and Bolivar counties, Mississippi, were for sale a few years ago at any price offered. Fortunately, however, there was a little 'bucking up,' and the people of those counties are now prosperous, with their lands selling higher than ever before. Boll weevil have stimulated planters to extra efforts, to extra energy, to extra intelligence in the preparation of the soil, in seed selection and in many other directions, and they are now raising as much as they ever did on their lands."

"I believe that, after boll weevil have been present a few years, the damage they do becomes less, a fact which is attributable in part to the multiplication of their enemies, chiefly red ants."

"My advice is to get your fields large, because if you do there will be practically no weevil. They hibernate in timber on the edge of the fields. If we clear out the big timber we will get rid of weevil. It will take a large investment to do this, but where can you spend your money and get better returns?"

"In this connection I wish to say that I have no sympathy with the owner who holds cut-over lands. He ought to put some of his money in the development of these lands or he ought to sell them to someone who will. It is a 'burning shame' that so few of these lands are in cultivation."

"My message to you is that no farmer who works his land, lives on it, gives it his personal attention and pushes cultivation, has anything to fear from boll weevil. A poison has been discovered by the government that will destroy boll weevil and we have already bought large quantities of this for our plantations in Washington and Bolivar counties, as well as the machines for its application. I do not believe, owing to the severity of the winter, that weevil will do much damage this year, and we do not expect to lose a single bale of cotton from weevil the coming season. But if they do return, I believe the poison both effective and practical."

Bolton Smith, of Memphis, said the labor question, levees, malaria and proper housing of employes in summer were some of the problems to be solved in effecting development of cut-over lands.

He believed that the labor problem would be greatly simplified by more careful consideration of the interests of employes, with particular reference to their welfare and education.

He thought the levees would be taken care of properly and that they would afford ample protection if the plans of the United States engineers were followed.

He advocated destroying all malaria bearing mosquitoes, especially in houses, in handling the malaria problem, as well as drainage.

In connection with proper housing, he suggested that the association have plans drawn for a two story house for employes, with the upper finished as an open-air bedroom for use during the hot weather. He did not believe effective labor could be rendered by men, women or children unable to secure refreshing sleep.

S. E. Simonson suggested that a resolution be adopted appealing

to congress to exempt from taxation all profits on alluvial lands turned back into the development of uncultivated lands. It was left to the governing board to determine what, if any, action would be taken on this subject, especially as it seems that the proposition is not in high favor with those in control of legislation at the national capital.

The Traffic Meeting

"Lumber Week" in Memphis was formally inaugurated on Tuesday, January fifteen, when the Southern Hardwood Traffic Association held its fifth annual at the Hotel Chisca. Although the weather throughout the country interfered seriously with transportation, there were more than 115 lumbermen present when President Stark called the meeting to order and extended a welcome to them immediately following luncheon at 1 p. m. More than 50 members were absent because of inability to reach Memphis. Among the number was Edward A. Haid, of St. Louis, one of the attorneys of the association, who was scheduled to speak on the subject of "War Taxes on Freight Rates."

The committee on elections, George C. Ehemann, chairman, reported

an indefinite period or whether they were to be turned back to private owners, the organization would prove absolutely necessary in seeing that the industry and the territory represented by this association were treated fairly and impartially. He asserted in this connection that there was "no traffic association that had ever made itself a more potent factor in transportation and that is more generally recognized for its impartial and constructive attitude before the Interstate Commerce Commission, the railroad managements and its members, than this association." In proof of the latter he pointed to the gain of thirty-nine members during the year, without loss of a single old one.

He mentioned the issuance of a "concise, accurate and comprehen-

F. B. ROBERTSON, MEMPHIS, SECOND VICE-PRESIDENT.

J. H. TOWNSHEND, MEMPHIS, SECRETARY-MANAGER

GEORGE LAND, CHARLESTON, MISS., DIRECTOR.

that the old officers had been re-elected, January 8, as follows: James E. Stark, president; R. L. Jurden, first vice president, and Frank B. Robertson, second vice president. He also reported that the following three-year directors had been chosen at the same time: R. J. Hackney, W. H. Russe, William Pritchard, Elliott Lang and Walker Wellford, all of Memphis, and George Land, Lamb-Fish Lumber Company, Charleston, Miss., and S. H. Swenson, Archer Lumber Company, Helena, Ark.

President Stark, in his address, expressed his admiration of the spirit of loyalty and co-operation shown by the members, the board of governors and the office force of the organization and declared that this was largely responsible for the successes of the year. He believed the most effective service rendered the members, aside from handling rate and other cases before the Interstate Commerce Commission, had been in seeing that cars were supplied for the handling of inbound shipments and outbound loading. He thought the "evolutions in the transportation world" during the year had given the association an excellent opportunity of proving its worth and insisted that, whether the government continued to operate the railroads for

sive" rate book as one of the accomplishments of the year and as one of the instrumentalities for securing new members. He said the scope of the work of the association had been enlarged through the opening of a branch office at Helena, Ark., and that the association had under consideration the establishment of still another office. He advocated broadening the field covered by the association "so as to represent all operators in what is known as the Mississippi Valley and Southwestern territory," and also believed that a booking department should be inaugurated for export shipments, not only with a view to facilitating the handling of export business after the war, but also with a view to greatly reducing the rate of such bookings or charters. He believed the time opportune for tendering the services of the association to the director general of the railroads of the United States "in handling the transportation of forest products in this territory," and recommended this course.

In conclusion he said that, if the members continued to display the same spirit of co-operation that had heretofore characterized them, there was nothing they could not accomplish.

The report of Secretary J. H. Townshend consisted of eight closely

typewritten pages covering in detail the operations of the year. From this are selected the following principal accomplishments:

First: Saving the members thousands of dollars through securing suspension for fifteen months of the proposed tariffs increasing rates from southern producing points to destinations in Central Freight Association territory and through securing effectiveness of the advance two months after it was granted by the commission, thus enabling members to ship out a great deal of stock that would have otherwise been penalized.

Second: Defeating the efforts of the carriers, in the 15 per cent horizontal advance in freight rates, in having these rates become effective July 1 and saving 41 members of the association \$191,747 in freight bills; also in having the commission hand down a decision denying this advance as to commodity rates.

Third: Effected a compromise settlement by which free time on export shipments was reduced from 10 to 7 days.

Fourth: Convinced Arkansas railroads that an advance of 15 per cent in rough material rates in that State was not justified.

Fifth: Made certain recommendations to the Interstate Commerce Commission in the case involving reclassification of lumber and lumber products and succeeded in having the examiner recommend to the commission adoption of the principle of "varying rates for varying minima." In this connection, Mr. Townshend stated that the larger lumber organizations and the carriers were in favor of abandoning the investigation in the reclassification case, but he recommended that the association press for an early decision.

Sixth: Pleasing Louisville members through the excellent service rendered by the branch office at that point, in charge of R. R. May, and rendering excellent service to Helena members through the branch office opened in that city September 1, in charge of J. A. Koehler.

Seventh: Bringing pressure to bear on congress for remedial legislation that would enable the railroads of the country to be operated as a single line and that would render the transportation situation adequate for the needs of the country, and in having thousands of cars sent from the congested Eastern territory to the South for loading with lumber.

Eighth: Securing information by every means possible that enabled the association to know just what were the needs and the deficiencies of its members in the way of cars and putting the organization in position to forecast periods of plentiful car supply as well as periods of exceeding car scarcity, so that they might know how to conduct their business and handle their shipments.

Ninth: Issuance of the rate book, distributed at \$20 for the first copy and \$10 for each additional copy, and greatly increasing the number of points covered, thus keeping it up to date.

Tenth: Secured a reduction of 20 cents per hundred pounds on minimum of 60,000 pounds to Pacific coast points and appeared before the commission, with promise of success, in opposing the proposed increase of Pacific coast rates to 75 cents on 60,000 pounds and to 80 cents on 40,000 pounds.

Eleventh: Defeated efforts of the Rock Island to cancel through rates from stations on its lines in Arkansas and Louisiana to Pensacola and had lower rates published from points on the Illinois Central and Yazoo & Mississippi Valley roads in Mississippi to Mobile and Pensacola. In this connection Mr. Townshend stated that it is the intention of the association to continue to press the carriers for establishment of equitable rates to the various ports in order that, when the war ends, members may have in effect such rates as will insure their commodity reaching the ports without undue disadvantage.

Twelfth: Prevailed upon a number of carriers to publish through rates to consuming territory in Carolina.

Thirteenth: Collected claims of \$36,420.02 out of a total of 59,042 and carried over claims amounting to \$32,741.83 to be collected. It returned as uncollectible claims amounting to only \$2,640.72.

Fourteenth: Gained 39 members in 1917, compared with 27 in 1916, making a total membership of 151.

Fifteenth: Saved thousands of dollars to members by handling various minor complaints, rate adjustments, trackage agreements, switching problems and other matters.

Sixteenth: Put F. B. Larson in charge of embargoes and informed

the association so that it is "better equipped than any other association or railroad in the South to tell what embargoes are in effect and what are not."

In conclusion Secretary Townshend thanked the members, the governing board and President Stark for their support and co-operation, and paid a tribute to the ability and faithfulness of the office force, consisting of five traffic experts and four stenographers.

The report of the treasurer, Elliott Lang, showed that, after enjoying receipts of \$29,636.94, the association had a fair working balance with which to begin the new year. Under the head of receipts, the biggest item was \$20,683.39.

W. A. Ransom, chairman of the membership committee, confirmed the gain in membership reported by Secretary Townshend.

R. L. Jurden then submitted a resolution tendering the services of the association to William G. McAdoo, director general of the railroads, it being felt that the association has services which will greatly aid the government in expediting freight movements. The resolution was unanimously adopted.

J. V. Norman did not believe government control would solve all the problems of transportation, but that it would help greatly. He believed it would be successful, and that if this proved true, there would never be a return to private ownership and separate operation of the railroads. He thought the outcome of government operation would depend primarily on two things: The ability displayed by Director-General McAdoo and his assistants, and the loyalty of officials and employes of the railroads. He regretted that Mr. McAdoo had chosen so many men who were not only opposed to government operation but who also opposed government regulation, and that he had not chosen a single assistant to represent the interests of shippers. He assumed, however, that the railroad officials and employes would rise to the discharge of their responsibilities in the present national crisis just as other big men are doing, and then outlined the advantages that would follow under government operation, as follows:

First: A car will be a car without regard to the name on its side and, like the Arkansas traveler, will be at home wherever it may be.

Second: Locomotives will be sent wherever they can be used to best advantage, without regard to ownership, thus insuring equitable distribution of motive power.

Third: The two-line haul, with its higher rate than the one-line haul, will be completely eliminated, much discrimination will be removed and rates will be leveled.

He summarizes the economies from government operation in this way:

First: In terminals, which will be operated as a unit in future at greatly reduced cost to shippers and large saving to the carriers.

Second: In high salaries. There will be no more instances of presidents of eastern roads drawing \$100,000 from the parent corporation and \$25,000 each from four subsidiary companies, and there will be no more soliciting freight and passenger forces.

Third: In handling freight by the shortest and most direct available route. He asserted in this connection that there is a vast distinction between the shortest route and the shortest available route, and that observance of this difference would prevent the congestion heretofore developing through use of short routes without regard to whether they were open or not.

Fourth: In eliminating duplication of passenger service, letting two or three trains between given points do the work eight to ten had done before.

Fifth: In elimination or great reduction in downtown ticket offices.

Sixth: In ability of the government to borrow money for improvements and equipment at lower rates than any corporation could do, however strong. He declared that this furnished an excellent opportunity to lumbermen, since many cars would be bought and since wood would have to be used, no steel being available.

Seventh: In rendering possible commercial use of tree-tops and other forest products not heretofore profitable because of prohibitive freight rates.

Under disadvantages, he said that shippers would lose the right to route their own shipments, that they would have to pay higher

demurrage charges and that they would not receive the personal attention they had previously received from railroad men to their troubles and worries.

The greatest danger, in his opinion, in government operation of the railroads, lay in granting authority to fix rates and charges. He said that Director General McAdoo claimed such authority now, but that he could find no warrant in law for such and that he did not believe it would ever be granted.

He urged continuance of the Southern Hardwood Traffic Association, declaring that there had never been a time when it could be so valuable to its members in keeping them informed and in protecting their interests as now, and declaring still further that the government needed this organization. He particularly emphasized that government control opened the way for the settling of problems and issues which have hung in the balance for years, and he likewise emphasized the very high regard in which the association is held by the Interstate Commerce Commission because of its constructive attitude.

Summing up, he gave the members the following injunction:

First: See to it that there shall be no return to separate ownership and that the railroads of the country shall be operated as a unit.

Second: See to it that those in charge of the railroads shall never have the power to fix rates and charges without public hearings.

Third: Maintain your association for your own good and for the good of the government.

Mr. Norman declared that there were many worries and many losses ahead of the lumbermen, but he urged that they bear these without flinching and without complaint. He asserted that "Germany had to be beaten on the sacred soil of France or she had to be beaten in the United States," and that, if she were not beaten, none of the things heretofore counted worth while would mean anything. He therefore urged that the lumbermen support the government in every possible way and that they be ever on the alert to stamp out sedition and treachery in their own communities and to defeat the propaganda of the pacifists. He believed that he mistook the measure of the patriotism, loyalty and manhood of the members of the association if they did not rise to the heights demanded and if they did not forget dollars and profits and material things in supporting the men who have joined the colors and offered up their lives as a supreme sacrifice on the altar of their country in order that liberty and democracy and freedom and civilization might be saved from overthrow at the hands of the Prussian bayonet.

"We must win the war, else we are lost."

Such a burst of applause greeted him when he had concluded his address that he had to rise in acknowledgment of the ovation.

President Stark announced the following auditing committee: D. F. Heuer, chairman; J. S. Williford and LeRoy Halyward.

It was unanimously voted that the association appeal to the Interstate Commerce Commission for an early decision in the case involving reclassification of lumber and lumber products, 8131; that the commission be asked to adhere to the principle of varying rates for varying minima, and that counsel be employed to argue this case before the commission. Following adjournment of the regular meeting the board of governors employed Mr. Norman to represent it in this hearing, which came up at Washington January 18.

Under the head of "General Traffic Discussion," Mr. Townshend informed members of the association that all priority orders had been withdrawn and permits for shipments must be secured from the director-general.

He also told them that dunnage allowances were wholly inadequate, but informed them that the ruling issued by the Illinois Central requiring that all lumber shipped in open cars should be bulkheaded, had been modified so as to apply only to dressed lumber.

Mr. Townshend also said that he had called on members of the Interstate Commerce Commission and on Representative Sims of Tennessee during a recent visit in Washington and that they had advised him that they were in sympathy with the abrogation of the safety appliance act so as to enable lumber firms owning equipment to use this on the main lines of the railroads with a view to relieving shortage of equipment for handling logs to their mills.

On motion of W. B. Morgan, Morgan Veneer Company, President Stark requested Mr. Townshend to ascertain as soon as possible the attitude of the government toward terminal switching charges under the regime of government control. Mr. Morgan added that all the railroads in his territory were still charging their usual rates for terminal switching services.

The question of canceling present transit arrangements on raw material to permit manufactured product to move out over any road without regard to originating carrier was left to the board of governors to handle.

At the meeting of the governing board following adjournment, Elliott Lang was re-elected treasurer and J. H. Townshend was chosen to succeed himself as secretary-manager.

Operations Seriously Menaced

Logging and manufacturing operations are at practically a complete standstill in Memphis and the Memphis territory.

The mills, despite the telegram sent to Washington by the newly organized American Hardwood Manufacturers' Association, pointing out that the manufacturers of lumber produce large quantities of fuel wood, in the way of slabs and other refuse, which is essential to the welfare of large numbers of people in the mill districts, are requested by the fuel administrator to observe the suspension rule until the five-day period closes. They will not be able to overcome the handicap of the most serious weather experienced in the Mississippi valley in a generation or more. The ground is covered with snow and ice to the depth of more than a foot as far south as Clarksdale, Miss., and Tutwiler, Miss., and some of the larger companies attempt to make no secret of the fact that, if all the coal in the world were available and if there were no fuel order in the way, it would be impossible to get the necessary labor to move the output of the plants from the saw under present weather conditions. And, what is perhaps the most unfortunate phase of the situation, there is no prospect of any letting up in weather severity. It is snowing again at Memphis on top of the present covering of 12 to 15 inches, on the level, and the long distance forecast holds out no hope for early amelioration.

There is not a mill running in Memphis and it is doubtful if any of them will be able to operate, except in a most limited way, for a number of days, even if the weather itself should get materially better. For, in addition to the fuel order and the weather, they have very few logs and little prospect of getting any in the immediate future. J. W. Dickson, president of the Valley Log Loading Company, in discussing this phase of the situation recently, said:

We are confining our loading operations wholly to the territory south of Clarksdale and Tutwiler, Miss., and are shipping logs only to mills in that part of the valley region. We are not loading a single car for industries at Memphis. This ban has been placed on Memphis because of the enormous congestion of freight tied up here through embargoes which prevent it from moving to destinations north and east. There are more than 200 cars loaded with logs on the yards of the railroad companies in Memphis, but they cannot be delivered to the mills until the congestion, behind which they stand, has been relieved, and no more cars will be loaded for this city until these have been delivered to the mills. Furthermore, because of labor and weather conditions, Memphis mills cannot operate any way and the 200 or more cars already in the city will be sufficient to engage them for some days after they are able to resume operations. We are working two of our log loading machines in the territory indicated. The other is idle. The last is true of the loading machine on the Memphis-Marianna cut-off of the St. Louis, Iron Mountain & Southern.

It goes without saying that, under present weather conditions, it

is impossible to accomplish anything in the way of either cutting or hauling logs to the rights of way of the railroads. This phase of the situation, however, is compensated for to a certain extent by the fact that there are millions of feet of logs already on the rights of way. Stoppage of logging, however, must naturally have a serious bearing on the log supply for the future when present handicaps to manufacturing operations no longer prevail.

River transportation of logs is at a complete standstill. Steamboats in the local harbor are all ice-locked at present and are threatened with serious damage from the breaking up of the ice and from the heavy floes that will result. None of the craft operated by lumber interests for the handling of logs to their mills is being used at present, and indications are that it will be some time before any of these boats or barges can be operated again.

The supply of cars for handling outbound shipments of lumber is reported materially larger than had been the case for some time. These are being placed on sidings at plants operated by lumber companies, and they are being loaded with lumber and forest products as rapidly as possible. They will thus be ready for moving quickly when the present congestion is broken up and when

the embargoes now in force are raised. According to J. H. Townsend, secretary-treasurer of the association, there will be a larger movement of lumber when these conditions exist than has been the case for a long while. At present, however, all destinations in the territory north of the Ohio and Potomac rivers and east of the Mississippi are embargoed, as well as those in Western Trunk Line territory reached through the gateways at Chicago, St. Louis or Cairo. The only open outlets are those in the West, the Southwest and the Southeast and the ports.

The Southern Hardwood Traffic Association has received a message from J. V. Norman, attorney of the association, now in Washington, stating that the fuel administrator gives logging roads the right to use fuel. This was sent in response to a request for information by the association, but, in view of present weather and manufacturing conditions, the favorable ruling does not tend to help matters very much.

Readers of the HARDWOOD RECORD are doubtless familiar with the fact that a new priority order has been issued, prohibiting the use of open equipment, with the exception of flat cars, for the handling of anything but fuel.

Occurrences at Washington Interesting to Lumbermen

Personal Mention and the Activities of Various Boards and Committees

A statement covering the work done by the Aircraft Production Board was issued January 22 at Washington by Howard E. Coffin, chairman of the board. A summary of his report follows:

The appropriation of \$640,000,000 in July, 1917, marked the beginning of government aircraft history in this country.

About half of this amount was for the purchase of aircraft, and the remainder for the building up and maintenance of an air service personnel greater than that of our entire standing army of a few months before.

More than 100 men were sent to Europe to study methods there. The policy of aircraft development mapped out for this country was seven-fold and is as follows:

1. The United States to establish and maintain a system of training stations, to provide preliminary training.

2. Twenty-four training stations were authorized under the bill. Nine ground for the training in flying were planned. Both lines of work have been completed. More than half of these training stations are already in full operation, and the others are under construction.

3. To accomplish an international standardization in aircraft materials, in detail of design and types, and to achieve such co-ordination of effort as would concentrate the manufacturing facilities of the various Allied countries upon the minimum number of types of those machines for which the producing equipment was best fitted.

4. To construct primary training machines of quality and quantity. The production of training machines will be in excess of the needs of the program by January 20. The production of these machines has been behind schedule because of the necessity for supplying training engines from this country to meet Canada's considerable requirements and because of the difficulties of a sudden increase of a manufacturing industry inadequate to the task.

5. To provide, equip and train flyers and mechanics. This program is progressing exactly on schedule. Thousands of mechanics are being put into actual service with the allied forces. Trained men will be released as needed in the United States Air Service and their places kept filled with fresh material. Four of the northern flying schools have been turned into mechanics' schools during the winter months. American flyers are in training in the United States and abroad and it is probable that the original program for pilots will be increased. The personnel for such increase is already available.

6. To provide raw and semi-finished materials and finished parts, including motors, to insure the consummation of the augmented allied aircraft building programs.

This has been and is being done. All of the allied nations are in considerable degree dependent upon materials and parts shipped from the United States. It is vitally important that the American aircraft program be not permitted to interrupt this flow of materials to the allies.

7. To provide for the equipment of the American forces in France for the period of January to June, 1918, in large part by purchase of fighting machines manufactured in allied countries, and to supply the machine tools and raw and semi-finished materials necessary to insure their production.

One of the first acts of the aircraft board after the passage of the appropriation bill in July was to authorize the placing by General Pershing of orders for several thousand fighting machines in allied countries. This action was taken to insure adequate equipment of the American forces prior to June 1918, in case of expected delays in manufacture and shipment of American-made service planes. Many millions of dollars worth of materials and machine tools have been shipped from this country to aid this production.

7. To provide completed service machines, including combat and bombing types, for American need after July 1st, 1918, and for such shipment of the finished product overseas as tonnage might permit.

It was deemed advisable to provide for advanced training over seas adjacent to the actual theatre of military operations, but so energetic has been the work of the personnel division of the signal corps that the training facilities thus provided have been soon overcrowded, with resultant

request that early arrangement for advanced training be made in America. To meet this change in program, delivery of advanced training planes will begin this month and within ninety days will have met requirements. The engines of foreign design for this advanced training schedule are already in quantity production in this country.

In discussing the accomplishments of the Air Service in the consummation of the army program, it will be well to point out the impossibility of certain proposals enthusiastically and persistently put forward by word of mouth and in the press. We have seen and heard much of the proposal of '100,000 airplanes' to be provided by the United States within the next year. In a country where one great industry produces a million and a half motor cars per year, the fabrication of a hundred thousand planes might seem easy, but actual figures based upon three years of practical experience in the war show that there are now between forty and fifty men of the auxiliary service required for each active machine at the front. If this same ratio should be adhered to in our service, it would mean that some four million men would be required in our aeronautical department on foreign soil between our ports of debarkation and the fighting front.

Even though this number of men could be reduced by fifty per cent by increased efficiency and standardization, the number required is still staggering. Consider, also, the overseas transportation problem as related to material only and without reference to personnel and its maintenance. The transportation of finished planes, properly crated, with the necessary spares, accessories and equipment is in itself a serious problem, in view of the situation in ship tonnage.

The feat of getting the twelve-cylinder U. S. A. or so-called Liberty engine, from the first scratch on paper in June to the beginning of production of quantity manufacturing tools in November, is one never equalled even among the spectacular performances of the American motor car business. In June, from one to three weeks were required to deliver a properly authorized contract to a manufacturer after all details of the negotiation had been settled. Today, a few hours only are needed.

New sources of supply, flying fields, the experimental laboratory and other activities, under the direction of the Board, have been purposely located west of the Allegheny mountains, in accordance with the stated policy of the military departments to remove sources of war supply "two hundred miles from the seacoast," and to avoid the labor congestion which exists in all eastern industrial centers.

Established plants of the motor car industry are being largely utilized in the program of aircraft motor production, but automobile concerns are not being employed in airplane construction. In general, the statement may be made that not a single automobile factory is in any way involved in the plane building industry.

Placing of Business Reported

Within the last few weeks contracts have been awarded for 71,000 army escort wagons, 25,000 carts and 1,000,000 wheels. Prior to that, last summer, 63,000 escort wagons were contracted for. Contracts have been let to 75 firms, it is reported.

The Southern Hardwood Emergency Bureau is organizing its members in different sections to be prepared to help the government on short notice. Subcommittees are being created to get information

from the members and keep the bureau here and the government advised where needed material can be obtained promptly. Committees are to be established in St. Louis and other cities besides those already organized, the chairmen of which are as follows:

J. W. McClure, Memphis; T. H. Brown, Louisville; E. A. Lang, Chicago; S. H. Swenson, Helena, Ark.; D. S. Watrous, Little Rock; R. H. Whitbeck, Alexandria, La.; E. O. Robinson, Cincinnati; E. K. Mahon, Huntington, W. Va.; E. M. Vestal, Knoxville, Tenn.; E. L. Davidson, Parkersburg, W. Va.; Fred Arn, Chattanooga; M. H. Massee, Macon, Ga.; W. M. Farris, Nashville.

Frank Neilsen of Minneapolis, who is in town, says that there are great quantities of walnut timber and lumber in the Middle West and other sections available for airplane propellers and other war production purposes.

The first annual report of the Council of National Defense, says that while it was not easy to secure adequate importations of mahogany for airplane propellers, due to lack of shipping, "the situation was clearly well in hand as long as black walnut and even birch could be used with success for propeller construction." Hereafter simply red cypress or tidewater cypress will be specified, it is understood, and not Louisiana red cypress.

The navy has also adopted the specifications and inspection system of various lumber trade associations in connection with lumber purchases for the navy, except certain special material like long planks, stock for boat building, etc. Several trade associations are making inspections of lumber for the navy under the improved purchasing plan worked out by W. M. Morford, lumber expert of the bureau of supplies and accounts. The National Hardwood Lumber Association's inspectors are making inspections where desired in accordance with government specifications.

Mr. Morford recently bought 5,500,000 feet of southern pine for overseas shipment for the navy. He is also buying 1,500,000 feet of cypress, 6,000,000 feet of fir, 1,600,000 feet of North Carolina pine, and various quantities of poplar, oak and other hardwood lumber. The navy has been letting contracts for portable houses to Burton & Co. and to a Michigan company.

Tests are being made by the shipping board and the steamboat inspection service of fir and spruce oars for the lifeboats on government vessels, with a view to substituting such material for ash, which has been universally specified by the government for oars for many years. These tests are the result of a shortage of ash, owing to the quantities needed for airplane and military vehicle construction.

Recent government lumber orders include 28,000,000 feet to the North Carolina Bureau for a new army cantonment for engineer troops at Belvoir, Va., the army proving ground at Aberdeen, Md., and Hog Island ship yard; 1,600,000 feet to the same bureau for additions to the camps at Columbia, Spartanburg, Greenville, Petersburg and Charlotte; 4,700,000 feet to the same bureau for the government filling plant in Maryland, 2,120,000 feet for Frankford arsenal, and 7,800,000 feet for construction work at Alexandria, Va.

Also 4,250,000 feet to the Southern Pine Bureau for the Italian navy, nearly as much for the Italian railroads, 3,500,000 feet for the British government purposes in France, and 20,000,000 feet for government barges.

Besides the new army camp at Belvoir and the big barge construction program, American lumbermen are to be called upon for material for other big government construction works. Notable among these are the powder factories at Charleston, W. Va., and Nashville, Tenn., which Thompson-Starrett Company is to build. It is estimated that many million feet of lumber will be needed for operations at Charleston alone, including the construction of a lot of dwelling houses for men employed in the government powder plant, projectile, armor plate, steel and munition factories.

With the munition plants scarcely under way, the government is reported as about to undertake the construction of storage warehouses at central distributing points for supplying army camps. Atlanta, St. Louis, Dallas and other places are mentioned as locations of these establishments.

The government housing operations are rounding into shape

with the recent passage by the senate of a bill authorizing the shipping board to spend \$50,000,000 on housing for ship yard employees and allotments already made by the board of \$5,000,000 to the Bethlehem Steel Company for construction work near Sparrows Point, Md., and \$1,500,000 to the Newport News Shipbuilding Co. for similar work near Newport News.

Big housing operations are to be carried on in and near Philadelphia and Camden, N. J., to accommodate workers at the Hog Island ship yard, and also at Newark, N. J., and Chester and Bristol, Pa.

Director Gifford of the Council of National Defense testified recently before a senate investigating committee that the council had saved \$20,000,000 by having the cantonment plans changed from one story to two-story buildings, \$2,000,000 on cantonment lumber in price regulation, and \$2,850,000 on spruce for airplanes.

Lumber interests have been declared exempt from the Garfield coal conservation order to the extent that sawmills cutting ship schedules, ship yard material and airplane stock need not close down on the days specified.

However, other sawmills and woodworking plants were required to close even though they burnt no coal, but only mill waste. Water power run mills were also expected to close, the prime object of the order being to relieve the transportation situation by checking production temporarily.

The Reconsignment Case

The reconsignment case has been decided by the commission in a manner satisfactory to the railroads and to the Southern Pine Association, it is believed. The commission holds that most of the proposed increased reconsignment charges were justified by the carriers.

The official summary of the decision, giving some of the leading points at issue, follows:

Upon consideration of increased charges and changes in regulations affecting the diversion or reconsignment of carload shipments, proposed by practically all of the carriers of the country; *Held*:

1. Proposed charges of \$2 and \$5 per car for change in name of consignee justified to the extent that they do not exceed \$1 per car.
2. Rule providing that if request is made for the diversion or reconsignment of freight in carloads the carrier will make diligent effort to locate the shipment and effect the desired service, but will not be responsible for failure to do so unless such failure is due to negligence of its employees, justified as a continuation of the rule now in effect.
3. Proposed charge of \$2 per car for diversion or reconsignment in transit prior to arrival of shipment at original destination or terminal yard serving that destination justified.
4. Proposed charge of \$2 per car for diversion or reconsignment when order for that service is placed at billed destination in time to permit instructions to be given to yard employees prior to the arrival of the car justified.
5. Proposed charge of \$2 per car for stopping car prior to arrival at billed destination to be held for orders justified.
6. Proposed charge of \$5 per car for diversion or reconsignment at original destination to a point outside the switching limits, on orders received by the carrier after arrival, or too late to permit instructions to be given to yard employees before arrival, justified; but held that the same charge proposed for reforwarding to a similar point cars which have been placed for unloading but have not been unloaded has been justified only in so far as such charge will be lawful under the fourth section when considered in connection with the charges approved in rule 7.
7. Proposed charge of local tariff rates for reforwarding to a point within the switching limits cars which have been placed for unloading but have not been unloaded found justified.
8. Proposed rule found justified providing that—
 - (a) A single change in the name of the consignee at first destination, and (or) a single change in the designation of his place of delivery at first destination, will be allowed without charge if order is received in time to permit instructions to be given to yard employees prior to arrival of car at first destination or at the terminal yard serving such destination.
 - (b) If such orders are received in time to permit instructions to be given to yard employees within 24 hours after arrival of car at terminal yard a charge of \$2 per car will be made.
 - (c) If such orders are received subsequent to 24 hours after arrival of car at terminal yard a charge of \$5 per car will be made.
9. Proposed application of charges for reconsignment regardless of the method of freight rate construction justified.
10. Proposed regulation prohibiting reconsignment to an embargoed point justified in part.

With respect to certain provisions not included in the general rules; *Held*:

Increased charges for diversion and reconsignment proposed by certain New England carriers not justified.

Charges proposed by some respondents for transferring the contents of certain reconsigned cars not justified.

A logging railroad operated purely as a plant facility of the mill owning it does not have to pay tax as a common carrier, according to a ruling expected daily from the Commission of Internal Revenue. If, however, the road hauls freight for other concerns it must pay such tax.

Many exceptions to Examiner Fred Esch's tentative report to the interstate commerce commission in the lumber reclassification case are taken in briefs just filed with the commission by attorneys for the Wholesale Millwork Association, Pacific coast and Inland Empire lumber interests, and southern railroads.

Hardwood Manufacturers' Prepare for Big Annual

The Hardwood Manufacturers' Association of the United States will hold its sixteenth annual convention at the Hotel Sinton, Cincinnati, on February 5 and 6. Not only does the enthusiasm within the membership, covering membership in the open price plan, augur well for a successful meeting, but the spirit and conditions of the times will have an equal bearing in securing a full attendance and enthusiastic and attentive sessions.

Not in years have the activities of the Hardwood Manufacturers' Association assumed such important aspects, the open price plan having met with great success during the past year and fully justifying its adoption. This has not been accomplished though without strenuous work on the part of the officials in charge of the association, and the three gentlemen pictured on this page have put in Herculean effort which has borne proper fruit.

In spite of threatened disorganization of transportation, the association is practically assured of an attendance of at least 700 delegates. The program and general condition of business would make it certain that this will be one of the most important gatherings in the history of the association.

At a meeting of the board of governors and of eastern territory members of the open competition plan, held at Cincinnati recently, trade conditions were discussed. The consensus of opinion was that the business condition is good except for transportation difficulties, it being stated that not enough cars can be secured for the delivery of lumber and material needed at shipyards as fast as it can be produced.

Thus it will be seen that the association will have before it many questions of excessive importance and gravity.

The program has just been completed and issued by Mr. Gadd. It is given herewith as follows:

TUESDAY, FEBRUARY 5

10:30 A. M.

Convention called to order by President B. B. Burns.

Address by C. A. Hinsch, Cincinnati, O., president, American Bankers' Association, on "Co-operation."

Address by Mr. A. C. MacMahon, Chicago, sales manager, the National Cash Register Company, on "Science of Selling and Solving Knotty Problems."

Appointment of committees.

(Recess for Luncheon)

TUESDAY AFTERNOON SESSION

2:00 P. M.

Address by Judge L. C. Boyle, Kansas City, Mo., on "Co-operation Within the Law."

Address by Mr. C. H. Seovell, C. P. A., Boston, Mass., on "Accounting Essentials for Lumber Industry."

Report of Mr. M. W. Stark, chairman, committee on "Open Competition."

Discussion of business conditions, led by Mr. M. W. Stark, St. Albans, W. Va.

TUESDAY EVENING

Smoker and vaudeville entertainment at 8 o'clock in banquet hall on the ninth floor, as a compliment of the Hardwood Manufacturers' Association to its guests.

WEDNESDAY, FEBRUARY 6

11:00 A. M.

Report of committee on officers reports.

Address by Mr. William Ganson Rose, Cleveland, O., on "Enthusiasm."

Address by Mr. Gilbert H. Montague, New York City, on "Trade Associations and the War."

Report of Mr. W. E. DeLaney, chairman, executive grading committee.

Report of Mr. B. F. Dulweber, chairman, committee on transportation.

Report of other committees.

Election of officers.

Adjournment.

The present governing body is one of the most effective and enthusiastic that has ever carried on the affairs of the association. The officers are:

B. B. Burns, Huntington, W. Va., president; F. R. Gadd, Cincinnati, assistant to the president; E. O. Robinson, Cincinnati, second vice-president and M. W. Stark, treasurer.

It is a pretty generally accepted idea that the higher priced machines are superior. The idea has good logic to support it, but we must remember that there are always exceptions. Sometimes a machine that seems abnormally cheap may also be superior, because of new methods of construction that have eliminated a lot of cost.

It is the element of doubt in business that serves to whet our wits, and when we reach the point, generally via the ego route, where we have no element of doubt about our being able to do things better than anybody else, the wits soon begin to dull and we fall below our right standard of accomplishment.

B. B. BURNS, HUNTINGTON, W. VA.,
PRESIDENT

M. W. STARK, ST. ALBANS, W. VA.,
CHAIRMAN OPEN PRICE COMMITTEE

F. R. GADD, CINCINNATI,
ASSISTANT TO PRESIDENT

Last Minute Convention News

Hoosiers Have Old Time Home-Coming, Walter Crim Elected—Michigan Hardwood Men in Important Gathering—Chicago Chosen for National Hardwood Meeting Place

National Association Committee Meeting

Two committees of the National Lumber Manufacturers' Association held meetings January 24 in the Lumber Exchange building, Chicago. They were the executive committee and the committee on government relations.

The meeting of the board of directors was postponed indefinitely, but it is not thought the time will be long until the meeting is held. The disorganized condition of railroad travel was the cause of postponement. Some of the western members of the board were unable to reach Chicago. As soon as a full attendance appears to be assured, the meeting of the board of directors will be held,

was thoroughly and favorably discussed and plans for increasing its usefulness were considered.

President John M. Woods presided at the meeting and went from Chicago to Indianapolis, with Secretary Fish and directors Payson Smith, of Minneapolis and T. M. Brown of Louisville.

Michigan Men Gratified With Stock Showing

The stock showing made in the market conditions report presented by Chairman Abbott of the market conditions committee before the midwinter meeting of the Michigan Hardwood Manufacturers' Association was gratifying in the extreme. The meet-

INDIANA HARDWOOD LUMBER
ASSOCIATION

W. C. HULL, PRESIDENT MICHIGAN
HARDWOOD MANUFACTURERS'
ASSOCIATION

but from the nature of the case, the exact date cannot now be set.

Most of the business transacted by the two committees was of a routine nature; but the government relations committee, which has a large membership, found it advisable to appoint a subcommittee of ten in order that the work might be more expeditiously attended to. The subcommittee contains five retailers and five manufacturers, and a meeting was called for Wednesday, January 30 in Chicago.

Chicago Chosen for National Annual

The board of governors of the National Hardwood Lumber Association met in Chicago on Wednesday, January 23, at the Chicago headquarters of that body. Extremely unfavorable traveling conditions resulted in a light attendance, a number of the officials being tied up in half way cities and unable to get to Chicago in time.

The most important decision was the selection of the Hotel Sherman, Chicago, for the next annual meeting. Owing to the fact that there is a string of big gatherings at the Sherman in June it was impossible to name the date, which will however, be somewhere near the middle of June. The exact date will be named later.

The work of the War Service Bureau, recently installed at Washington, by Secretary Fish in behalf of the association members

ing was held on Thursday, January 24, at the Hotel Statler, Detroit.

The figures showed that on January 1, there were 40,000,000 feet less No. 3 hardwoods and 13,000,000 feet less No. 2 common and better hardwoods, or a total of 53,000,000 feet, than a year ago. Hemlock showed an increase of 11,000,000 feet in two-inch No. 2 and better though there was a very large decrease in the one inch. Both hardwoods and hemlock showed a very healthy condition and the report was the cause of much gratification.

There was an exceptionally strong attendance at the meeting which considered the regular line of business as well as special reports and papers. The reports of the secretary and treasurer and of the regular committees were approved.

The Northern Hardwood Emergency Bureau, which is working at Washington, under the supervision of Roy H. Jones, made its first report which showed marked accomplishments in behalf of its sponsors, the Michigan Association and the Northern Hemlock and Hardwood Manufacturers' Association. The report was read by C. A. Bigelow, chairman of the bureau, and was confirmed and unanimously approved.

N. M. Langdon presented a paper read by W. L. Martin covering the question of feeding men in camps. The paper will be printed and distributed among the membership.

Following the appointment of a committee of five to obtain figures on the cost of production the meeting adjourned.

Indianians Come Home Again

Hoosier hardwood men met again at the famous annual homecoming in Indianapolis on Thursday, January twenty-four.

The Claypool Hotel was once more the meeting place. In spite of great difficulties in traveling there was a record crowd on hand, many former Hoosiers now located at distant points preferring to risk the long trip rather than miss the visit with old friends from the home state.

Fish Gives Valuable Information

Secretary Frank F. Fish of the National Hardwood Lumber Association was the principal speaker. Mr. Fish who has put in most of recent months with Washington officialdom and who is now in charge of the new War Service Bureau which the National has just installed at Washington was most interesting in his description of things as he found them in the nation's capital. He reviewed the history of lumber purchases by the many government departments and with startling statements of amounts involved brought a realization of the vital importance of agencies to facilitate the stupendous buying job which confronts those responsible.

He told of ways in which his bureau has already been of big help and urged Indiana hardwood men to speedily file with him the complete information he is seeking in order to keep himself posted up to date on stocks, character of timber producing facilities and ability to produce specialized materials, available among the membership.

Mr. Fish spoke of the splendid work done by R. H. Downman in charge of lumber purchases for this and allied governments. Illustrating the magnitude of the purchases he said that the navy buys a million feet of lumber a day. Much of this stock is going into shipyards, docks, boats, etc. At one yard alone (Hog Island) two hundred million feet have been used to provide facilities for building fifty ships at one time. There are four or five other yards of equal importance. In the hardwood end one contractor alone has consumed over thirty million feet of oak in making cabin trim for steel merchant boats.

He said "After my frequent visits to the various departments at Washington I am convinced that the shipping board is doing better work than ever and that the progress being made cannot possibly be measured from outside observation. It is because we can offer the government so much real aid with our nine hundred members having large producing capacity and full stocks on hand that the Washington office was opened. We are at the service of the whole hardwood trade and hope that if you have received our letter you will speedily give us the information we seek therein."

Mr. Fish said that the association will finance the bureau for the present and then went on to tell of various directions in which trade can be increased in government work which assures quick delivery of shipments. He said that since the first of August the army vehicle board has sold to Uncle Sam one hundred and thirty-four thousand escort wagons, twenty-five thousand carts and one million extra wheels. This material from now on will be purchased from eighty wagon manufacturers interested in government orders.

Commenting on the threat of embargo on non-essentials, Mr. Fish said that there apparently is no danger of the furniture people shutting down, judging by the flood of desks and other office equipment going into Washington. He raised the further point regarding embargo of non-essentials that with production shut off the government's revenue from such sources would also cease and chaos and hardship follow. He spoke of the formation of a war committee by millwork interests which have suffered heavily through slackness in building. This committee offered its services to the government and has recently been given the largest order for handles ever placed. He told of the desire for co-operation shown by government officials.

Analysis of Tax Reports

The revenue office at Indianapolis was represented by Mr. Richardson who told correct methods of filling out revenue reports and straightened out many hitherto vexing problems. He urged em-

ployers to ask their employees to make prompt and proper returns on income.

Mayor Jewett of Indianapolis pleaded that it is the business man's responsibility to see that business is kept going as nearly on a normal plane as possible in order that disturbance of the vital balance in our business and industry may not result with disaster to the country.

President Wertz expressed the opinion that advances in lumber prices have not been at all out of line with advances in everything making up lumber costs. He said that further advances on all items would be vitally necessary this year.

President Wertz recommended that the offices of secretary and treasurer be consolidated, which recommendation was favorably acted upon later by resolution.

Secretary Richardson announced an increase of twelve in the membership and then read a favorable report from Treasurer Buckley who was absent because of illness.

After a vote of thanks to Frank Fish for his instructive talk the members listened to a most able address on questions of forestry, prepared and delivered by W. A. Guthrie.

The nominating committee reported with recommendation for the election of the following officers:

PRESIDENT: Walter Crim, Salem.

FIRST VICE PRESIDENT: G. H. Palmer, Sheridan.

SECOND VICE PRESIDENT: W. A. Guthrie, Indianapolis.

SECRETARY TREASURER: Edgar Richardson, Indianapolis.

DIRECTORS: Charles H. Barnaby, J. V. Stimson, S. M. Burkholder, C. Kramer, H. B. Sale, Mr. Kitchen, Mr. Smith, W. W. Knight, Mr. Waters, Mr. Shepherd, Mr. Reynolds and Van B. Perrine.

The business sessions then adjourned.

Lumber Resources Mobilized

"For the first time in its history the lumber industry has been mobilized," says R. S. Kellogg, secretary of the National Lumber Manufacturers' Association, in his annual review of conditions in the lumber business. "Previous to April, 1917, the lumber industry, like other great American industries, was a sleeping giant, occasionally showing signs of awakening, but never fully aroused. Then the war came to America with its demands upon every resource of men, money and materials. Among the first requirements was lumber—pine, fir, cypress, spruce, hemlock and redwood, with which to house the army; heavy timbers of yellow pine, Douglas fir and oak to build ships; long, clear sticks of spruce for airplanes; oak for artillery and transport wheels; walnut for gunstocks and airplane propellers; willow for artificial limbs, and some forty species for munitions and commissary boxes. Every kind of wood grown in the United States was called upon to meet some particular item of the multitudinous demands for war material.

Since early in May, 1917, approximately 1,250,000,000 feet of lumber has been sold either direct to the government or to contractors working upon government orders through the agency of emergency bureaus and a new record has been established for speed in doing big business under war conditions. The prices charged have been reasonable throughout, and in many cases less than those prevailing on the open market for the same material. In addition to this great quantity of lumber handled by the emergency bureaus for direct government purposes, very large quantities have also gone through the usual channels into the manufacture of boxes for munition and commissary supplies, while other requirements of the army and navy and industrial construction in connection with war orders have been large. All together perhaps as much as 2,000,000,000 feet of lumber has gone into use for purposes of national defense during the past eight months. This is a great deal of lumber, and yet a demand of this size does not interfere with the supply for all the usual commercial purposes, because the lumber production of the United States in 1917 has been in the neighborhood of 40,000,000,000 feet, or 20 times as much as taken by the war. Due to car shortages and unsettled labor supply the cut has been four or five percent less than in 1916, and there will be no large accumulation of stocks at the beginning of the new year.

Cigar-Box Cedar

BY C. D. MILL

FOREST GROWN SPANISH CEDAR TREES IN THE INTERIOR OF COSTA RICA

ica that are only imperfectly explored and doubtless include considerable cedar still on the stump, the wood cannot be brought to market at this time because it would cost too much to bring the logs to shipping ports.

There are also other factors operating against exploiting cedar systematically and economically. The lack of efficient labor is the most serious drawback. The peons, mostly half-castes, the only kind of labor available to undertake the difficult task of operating a tract, are ignorant and extremely lazy and never take the trouble to prevent undue waste or to save the young trees. Season after season

The advances that have taken place in the price of cigar-box cedar of late in the American markets are due not entirely to the increased rate of freight. A well-known importer of this valuable wood in New York gave it as his opinion that one of the chief causes of the high prices and the constantly increasing inferiority of the quality of wood now generally seen in the New York markets, is the fact that the tree is rapidly becoming exterminated in the accessible districts of tropical America where the supply is obtained. While there are extensive regions in Central Amer-

they go farther afield and leave desolation in their course. The cutting operations are confined chiefly to the dry season of the year, which may be said to be from December to about June 1. During this period the slopes of the hills on which cedar principally grows, become very dry and during April and May the fires commence which are invariably very destructive, killing all the seedlings and many old trees in the virgin forests. It is estimated that fire consumes far more cedar annually than is cut and utilized. Moreover, the parts of trunks and the branches that

square less than fifteen inches are seldom utilized. The waste in top cuts and large branches in the aggregate represents enormous quantities of a season's cuttings and should be avoided if cedar is to last for use by the coming generation.

Briefly stated, cigar-box cedar is becoming scarce throughout its entire range of growth and it is very important that systematic efforts be made to prevent a total exhaustion of the valuable forest product. Students of tropical forestry and forest products will recall that attempts have been made from time to time to grow cedar on a commercial scale in large plantations. Very encouraging reports of such

TREE WITH LOPPED BRANCHES IS CEDAR 14 YEARS OLD AND 16 INCHES IN DIAMETER

LARGE BRANCHES OF CEDAR 22 INCHES IN DIAMETER LEFT IN THE WOOD TO ROT

SQUARE CEDAR LOGS SHOWING WASTE BOTH BY SQUARING AND IN THE FORM OF LARGE BRANCHES

plantations have been made. In fact, the cigar-box cedar tree was introduced into the East Indies and the experiments there with a few trees in various parts have shown that this species can make for itself a happy home outside of its native habitat.

The planting of cigar-box cedar would prove a very profitable investment. The attractive profits about which the promoters of eucalyptus plantations in California prophesied may be realized from cigar-box cedar plantations under proper and common-sense management. While it may not be the best investment for the private individual who wants quick returns on his money, it will yield satisfactory returns in the long run to permanent institutions or to the state. All the tree wants is a little attention and support from the state and it will soon become thoroughly established. Should the Indian Government, for instance, undertake to make extensive plantations, it would find that by the time the wood is exhausted in the West Indies, India would be ready to supply cedar logs for the American markets. This happened precisely with cinchona, papaya, and rubber, all tropical American products originally, but at present the choice cinchona, papaya and rubber are of East Indian origin. Experience has shown that the cedar can be easily propagated by seeds and cuttings, and since all parts of the tropics seem to be suitable for its satisfactory development, its cultivation should be undertaken on a considerable scale.

In order to provide an adequate supply of cedar for future use it is very important to conserve what there is now on the stump, and also to encourage a new crop on unused lands. Conserving cedar by judicious cutting and utilization of all merchantable parts of the trees felled is practically impossible under conditions as they now exist in the tropics. Fire, which is the greatest evil, cannot be controlled at present and the natural growth of young cedar will continue to be destroyed. It is believed that planting unused lands on an extensive scale by the government is the only way of helping to provide supplies of cedar for future use.

If there is ever to be a scheme of planting in any of the countries south of us, it must be undertaken by the state or by some perpetual institution. While it seems reasonable that private individuals can plant cedar and reap the benefits within a life time, it is important that the state provide the land owners with a practical object lesson as to how to plant, and indicate the importance of protecting the plantation from fire. With reference to the future forecasts of cedar values, no one can say anything definite, because the lumber prices of the future are likely to be much higher than they are now. Cigar-box cedar which is one of the most valuable and highly-esteemed woods in common use will continue in use and will not depreciate like some other woods are apt to do.

The Lumberman's Round Table

Associations and Men

The lumber and allied trades are fortunate in the number and value of their associations. Sometimes it is suggested that the industry is over-organized, but it may be taken for granted that non-essential associations, to use an adjective much in vogue at present, are likely to be eliminated or to disintegrate from natural causes. The fact that most of them persist is sufficient proof of their reason for existence.

The associations are doing a lot of good, practical, profitable work, of course; and this work shows a dollars-and-cents profit on the investment made by the members in the form of dues. But is it not worth remembering, especially at this season, that the personal gain is even more worth while than the commercial? The man who is a good association member is a bigger and better man, as a rule, than the one who refrains from mingling with his fellows, and who makes himself self-sufficient for the needs of his own business. This is without reference to the obvious business advantages, particularly evident in the lumber trade, of extensive acquaintance.

We have in mind one of the best lumbermen in the country. His experience and native ability have made him successful in a branch of the business requiring particular skill and specialized knowledge. He is a nominal member of a few associations—not many—and he does not attend the meetings of even those few. His career could be taken to prove that associations are unnecessary, and that the really capable man can get along without them.

But there are scores of other lumbermen whose success can be attributed specifically to intelligent use of associations. Meeting other lumbermen under the favorable conditions created by the associations has meant an increased knowledge of men and markets, of production and consumption, of manufacture and manipulation; and has created assets of unquestioned value in the successful operation of the business. Consequently, for one success made without assistance of association influence, there are dozens to which it has contributed.

Office Efficiency Methods

This is the time of year when office methods can be scrutinized to good advantage.

Is every operation being handled with the least labor and time?

Is all of the information which should be on hand readily available without undue difficulty and expense in maintaining the records?

Is work being duplicated unnecessarily?

The simplification of office routine is something that deserves as much attention as the improvement of methods in the mill or on the yard. Similarly, the accomplishment of the end is not only a technical improvement, but means economy. "Overhead" is another term for office expense; and there is no better way of cutting down overhead than to reduce the amount of labor required to handle office records.

Most office systems are like Topsy: they just grew. As a business develops, especially if its expansion has been so rapid that its guiding spirit has had little opportunity for the study of details, the need for improved methods becomes more and more evident; and that is why the services of an expert accountant, with broad experience and preferably some knowledge of the particular business affected, can be used to good advantage.

Because a "system" was installed years ago, it does not follow that no further improvements can be made. A hardwood manufacturer of large interests employed an office manager a few years ago, and he made many changes in the methods of handling routine operations. Undoubtedly his system was a great improvement over the crude and laborious plan formerly in use. However, he recently stated that, after an inspection of the system by one of the famous firms of expert accountants, an entirely new plan was devised and inaugurated.

"The new system," the lumberman explained with delight, "is simpler, more complete as to data recorded, and makes running the business as easy as falling off a log. Ever since I have been in the game I have been irritated by the difficulty of getting at information that I felt I should have in order to know what was being accomplished. The new system gives me all of this, gives it to me immediately, and makes a routine out of what formerly required special investigation and consumed time and money. I certainly made a good investment in hiring those accountants."

The man who hesitates to spend \$25 to \$50 a day for a limited period for the services of an expert in office methods may be losing that much every week because of the increased time required to do things which could be simplified by short cuts. He might be able, instead of putting on another girl, to get along with his present force, if the methods in use were improved. Services of this kind are worth all they cost—and the disposition is to make them cost more, instead of less, as their value is appreciated.

The Mail Bag

B-1167—Wants Locust

New York, N. Y., January 8.—Editor HARDWOOD RECORD: Where can I locate G 1 log run locust? We want to buy as much of this stock as we can get hold of, from 1 car up to 15 cars, and it can be shipped green. It can be any width from 3" up and any length from 18" or longer up to 16'. It must be put through a mill after it arrives, as the stock is cut up into small cuttings 12" and up long.

B-1168—Ash Pike Poles

Wisconsin, January 9.—Editor HARDWOOD RECORD: We are large buyers of 8 and 12 foot ash pike poles and would be pleased to have you furnish us with the names and addresses of manufacturers.

B-1169—Quarter-sawed Red Oak Backs

Oshkosh, Wis., January 15.—Editor HARDWOOD RECORD: We are in the market for a car of backs quarter-sawed red oak, plump $\frac{3}{4}$ " thick. If you can furnish these sizes please let us know and if part of or all of them have to be cut, please give us this information when you could furnish them and at what price: 4,000 pieces 4x20; 15,000 pieces 4x16; 2,000 pieces 6x22; 800 pieces 6x24; 1,500 pieces 5x22; 500 pieces 4x22; 2,000 pieces 2x20; 2,000 pieces 5x16.

B 1170—White Ash and Oak Wanted

San Francisco, Cal., January 19.—Editor HARDWOOD RECORD: We enclose you memorandum of FAS quartered white oak and FAS white cane ash that we are in the market for. We thought possibly you could be of service to us as well as to your friends by putting us in touch with the parties who have this stock now on hand, as we are in immediate need of same. If it will facilitate matters any, we wish you would have these parties quote us direct from the respective mills.

DAVIS HARDWOOD COMPANY,
Bay and Mason Streets.

The stock list referred to above, giving description of material desired, can be secured by communicating direct with the inquirer.
—EDITOR.

Clubs and Associations

Hemlock and Hardwood Meeting

Plans are nearly completed for the annual meetings of the Northern Hemlock and Hardwood Manufacturers' Association and the White Cedar Shingle Association at the Hotel Pfister. The dates for the former meeting are January 31 and February 1, while the shingle association will meet at 3:30 on the afternoon of January 31. Although Secretary O. T. Swan has not yet received acceptances from all the men requested to speak, it is certain that many new and vital subjects incident to the war will be discussed in addition to the presentation of the annual reports by the association officers and the chairmen of the several bureaus. Charles Keith, Kansas City, of the Southern Pine Association, will speak

on "The Relationship of the Lumber Industry to Government Service," and B. J. Packer, of the Wisconsin state department of agriculture of Madison, Wis., will present an illustrated moving picture lecture on "Grazing Cattle and Sheep on Cutover Lands." R. B. Goodman of Goodman, Wis., vice-president of the National Lumber Manufacturers' Association, will talk of work connected with the national, and of the relation district lumber associations bear to the national body. Terms of Sale, Thrift Stamp Campaigns in Logging Camps and Mills, Hemlock and Other Grades and Mill Inspections, will be other topics to come up for general discussion, besides the subjects to be launched in the reports of the bureau managers. One of the most important addresses will be by a member of the state railroad rate commission who will tell of the effect of the government's control of railways on the lumber industry, bearing especially on claims, rates and routings.

Dr. Hermann von Schrenck of St. Louis will be the only speaker at the White Cedar Shingle Association meeting. He will discuss from a technical and practical standpoint a number of exhaustive tests he has conducted on various kinds of roofing, and he will also present the subject of sap specifications. President Lingle of Westboro has named a nominating committee of the hemlock association which is as follows: J. T. Phillips, Green Bay; M. J. Quinlan, Soperton; and M. P. McCullough, Schofield. The board of directors will meet at 3 o'clock on the afternoon of February 1.

Knoxville Lumbermen Organize After Several Years of Trying to Get Together

After several years of trying to get together the hardwood lumber trade at Knoxville, Tenn., has at last organized a club called The Knoxville Lumbermen's Club. The unprecedented conditions in the hardwood business for the past several months have made all the members realize that a spirit of co-operation must exist in fact if the local trade is to succeed in 1918. The first object and real purpose of the club is to assist in supplying the government with timbers and lumber that the Knoxville section produces.

The club has had two meetings, and the following members were elected officers for the year: President, E. M. Vestal, Vestal Lumber & Manufacturing Company; secretary and treasurer, H. C. Kopcke of Kimball & Kopeke. Meetings will be held every other Saturday and business transacted during luncheon.

Announcement has just been made from Knoxville that local firms have been asked to furnish the government with 500,000 feet of oak lumber during the next two or three months. E. M. Vestal, president of the local club, has just returned from Washington where he conferred with government officials regarding this order. Members of the club are enthusiastic over the prospect of filling this large government business and prophesy that the lumber will be gotten out in record time. The club embodies in its membership every hardwood firm in the city.

Southwestern Hardwood Men Will Speed War Production

For the purpose of discussing mill operation methods with a view of speeding up the production of ship timbers, the directors of the Southern Hardwood Manufacturers' Club held a special meeting in Beaumont, Tex., on Wednesday, January 9. It went on record as strongly favoring the routing of war supplies through Gulf ports. The car shortage was discussed at great length, and all present seemed to feel that cars will be more plentiful when the effect of government regulation has had time to be felt.

E. M. VESTAL, PRESIDENT
OF KNOXVILLE, TENN., LUMBERMEN'S
CLUB

H. C. KOPCKE, SECRETARY-TREASURER
OF KNOXVILLE, TENN., LUMBERMEN'S
CLUB

THE LATE HARRISON PARKER
OF PALMER & PARKER,
BOSTON

A. Deutsch, president of the Sabine River Lumber and Logging Company of Oakdale, La., and San Antonio, Tex., is president of the club, and presided at the meeting. Others present were: A. C. Davis, Sabine Tramp Company, Beaumont; Rex H. Brown, Beaumont Lumber Co., Beaumont; G. N. Cleveland, Jr., South Texas Lumber Company, Houston; P. A. Ryan, Phillip A. Ryan Lumber Co., Lufkin; J. B. Robinson, Pelican Lumber Co., Mound, La.; G. V. Patterson, Alexandria Cooperage and Lumber Co., Alexandria; Ferd Brenner, Ferd Brenner Lumber Company, Alexandria; H. G. Bohlsson, H. G. Bohlsson Lumber Company, New Caney, Tex.

A Yellow Poplar Veteran

Now and then a yellow poplar tree comes to the market, proving that there are still a few of them in the woods. The latest hails from Letcher County, Kentucky, on the headwaters of Kentucky river. The big tree measured a little over 7 feet in diameter at the "butt," and contained five 12-foot cuts and three 10-foot cuts. Five heavy yoke of oxen were required to snake the big cuts from the mountain sides to the local mill, where it was manufactured into lumber and shipped to a Cincinnati wholesaler. When cut the measurement totaled nearly 6,000 feet of fine yellow poplar lumber, which brought a fancy price on the "Queen City" market. This was the largest poplar tree cut and marketed from eastern Kentucky in many years, although others of unusual size have been cut in that section within the past twelve months.

With the Trade

Harrison Parker

The last issue of *HARDWOOD RECORD* contained a brief notice of the death of Harrison Parker of the well-known Boston firm Palmer & Parker. Details at that time were not available.

Mr. Parker was first employed by his uncle, Harrison Parker, who established the first mahogany sawmill in Boston, in 1867 for the purpose of sawing mahogany and rosewood lumber and veneers—rosewood, then being a very popular wood, for piano and furniture manufacturers. The business prospered from the first, and supplied mahogany and veneers to all the piano forte makers, whose business in those early days settled around Boston.

In 1875 he formed a partnership with his brother-in-law, the late Irving S. Palmer, in the name of Palmer, Parker & Co., which continued with increasing success, for 32 years. This partnership was succeeded in 1907, by the corporation of Palmer & Parker Company, of which Harrison Parker was president, the late Irving S. Palmer, treasurer, Frank D. Sawyer, vice-president, and William I. Palmer, assistant treasurer.

Harrison Parker, as well as his partner, the late Irving S. Palmer, have been held by their large business acquaintances in the highest esteem, as types of the old-style high minded business men, who have stood as pillars of integrity in the business world. Now, they are fast finishing their course, but fortunately, leaving as a precious heritage, their business standards, as guides to the younger generation, now taking their places.

William I. Palmer, Gordon Parker, and Frank D. Sawyer, are succeeding to the business and they propose to assume the same high ideals of business integrity as in the past, continuing the business with the following personnel: Frank D. Sawyer, succeeding to the presidency; William I. Palmer, treasurer and vice-president; Gordon Parker, secretary.

Creditors Committee Discharged in Houston Case

The creditors committee under whose jurisdiction the affairs of George T. Houston & Co. and Houston Bros., have been conducted during the past year, was discharged on December 28 pursuant to full liquidation of all liabilities, the principle part of the assets and land holdings of the Houston company remaining undisturbed. The demands were brought about principally by the sale of surplus properties. The company still holds about 110,000 acres of timber and farm lands. The mill plant and equipment, the stock of logs, lumber, etc., are still intact, and the business will be conducted as formerly.

Mills that Did Not Shut Down

The eighty mills of the Northern Hemlock and Hardwood Manufacturers' Association did not close during the five-day period during which a great portion of the nation's industries were ordered to close recently. These mills manufacture their own fuel in the form of wood waste and while running produce more than they can use, the surplus being sold to private consumers. Had the mills stopped during the prescribed period they would have had to keep the plants warm by burning coal and thus a greater waste of the fuel would have resulted. Moreover, many of the plants are producing lumber which indirectly is being consumed in the manufacture of various government war requirements and the production of this essential material was not curtailed or interrupted. Permission to keep the plants running was obtained from both the federal fuel administrative department and State Fuel Administrator W. N. Fitzgerald in behalf of the association members by Secretary O. T. Swan.

The association has received a government order to supply 600,000 feet of hemlock of which fourteen carloads go to the army cantonment at Rockford, Ill., and fourteen to the cantonment at Battle Creek, Mich.

Plant to Cut Airplane Stock

A new plant to cut airplane stock to the amount of 1,000,000 feet each twenty-four hours is under construction at Vancouver, Wash. The plant will be operated by electricity secured from an existing power line, so that it will not be necessary to build a separate power plant, and construction is to be completed within sixty days. The construction of the plant alone will require 1,200,000 feet of Douglas fir lumber. The lumber manufacturers throughout the spruce district will cut fitches of the proper grade and dimensions, which will then be shipped to the government plant at Vancouver, where they will be cut up to the finished sizes required for the various airplane parts, and then shipped east to the many aircraft factories. This arrangement is expected greatly to increase the output of aircraft material, and to make possible a total production of the 10,000,000 feet of airplane stock wanted every month for the government program.

Experienced Labor Needed for Lumbermen's Regiment

The work of recruiting the 20th Engineers, the largest regiment in the world, which will help convert forests of Europe into materials to be used by our armies abroad has not been completed. A good many specialized mechanics and those skilled in specialized branches of labor are required.

A complete statement of the needs of the regiment can be secured by writing Major General W. M. Black, Chief of Engineers, War Department, Washington, D. C. The essential needs though, are men for all branches of woodwork, for all phases of logging operations, including logging railroad work, all branches of sawmilling, also a few planing mill operators and a few stenographers experienced in sawmill office work.

Major-General Black has just issued a statement to this effect, which also gives an outline of the organization of the 20th Engineers, method of selecting officers, requirements for enlisted men, and instructions as to how to enlist.

The regiment is now in immediate need of auxiliary road and bridge builders to the extent of three thousand men.

Pertinent Information

Baltimore Exports for December

The exports of lumber for December show some expansion in the list as far as variety of items is concerned, with a material increase in the volume of business done, which confirms the belief that stocks on the other side have been so seriously curtailed as to make replenishing necessary. It may be accepted as a fact that if the lumber were not urgently needed it would not be allowed to go forward at a time when other freights are simply swamping the available tonnage and when the greatest economy in the use of materials must be exercised. For the first time in months cypress again figures on the list, even though the quantity shipped is small. Poplar also once more holds a place on the schedule, with oak cutting quite an important figure, and a lot of other hardwoods sent out in addition. Of course, as far as this port is concerned, it must be borne in mind that much of the lumber credited to exports is really carried as dunnage, very little tonnage being available otherwise, except with regard to spruce, which continues to head the list and makes up the great bulk of the shipments.

Weather Holds Up Big Timber Port Development

The plans of the Weyerhaeuser Timber Corporation of Tacoma in regard to making Baltimore the chief distributing center for Pacific coast woods have been held back very much by the inclement weather and the railroad situation, but it is said that the project will be taken up energetically in the spring, and that tangible results may be looked for soon thereafter. The company, as announced some months ago, has bought a portion of the old quarantine grounds here and will establish its depot there, erecting big piers, with the latest facilities for loading and unloading, and a large mill wherein the heavy timber brought from the coast by water can be resawed and dressed according to the requirements of the customers. The lumber will be brought here by vessel, and will call for the creation of a fleet of steamers. Stocks destined for the export trade will go through, probably by way of the Panama Canal, while those intended for distribution in the territory east of the Mississippi River will be yarded here and cut into the sizes called for. The most improved resawing and planing machinery will be installed, and, apart from deep water, the depot will have connection with all of the railroads running out of Baltimore. It is estimated that the equipment of vessels and the yard will call for an outlay of not less than \$5,000,000, making the establishment one of the largest, if not the biggest, along the Atlantic seaboard. The Weyerhaeuser Corporation will be represented here by George F. M. Hauck, a partner in the wholesale lumber firm of T. J. Shryock & Co., and widely known in the trade. Mr. Hauck has made several trips to the coast in connection with the matter and is very optimistic as to the opportunities for the distribution of Pacific coast woods in this section of the country. He thinks the section will afford a constantly expanding market for the Far Western lumber, and the facilities to be provided will take into full consideration the possibilities presented.

Still Calling for Men

The government is still calling for men. The latest call comes from the war department for labor more or less skilled in various lines, and at pay ranging from \$500 to \$2,400 a year. Thousands are wanted for clerks, testing work, mechanical trades, drafting, and inspection. Lists of positions open, with the requirements for entrance, the pay, etc., will be sent upon request, by addressing John A. McIlhenny, Civil Service Commission, Washington, D. C.

Building Permits for 1917

The record of buildings erected in the United States for 1917 is one of defeat, not an inglorious defeat, but an incident to the swift readjustment of our national resources, consequent upon the war. There has been a rush from building operations, just as there is a rush from shop and store in any community when some appalling event occurs. In 101 principal cities of the United States for 1917 the building permits received by the *American Contractor*, Chicago, show a total of \$631,746,722, compared with \$889,884,679 for 1916, a decrease of 29 per cent. The total number of permits issued in these 101 cities was 198,968, as against 258,484 for 1916, a decrease of 23 per cent. The average cost of the buildings erected in 1917 was less than that erected in 1916, not because of reduced costs, but because of a greater percentage of small residences built, the need for workmen's homes having become acute. A few cities, 29 in fact, show a gain for the year. These do not include any of the first class and the gains are due mainly to special causes.

December figures also are shown on this page. Building permits in 109 principal cities for December total \$29,196,350, compared with \$68,043,869 for December, 1916, a decrease of 57 per cent.

American Woods for England

In discussing the sources of this year's timber supplies for England, the *London Timber Trades Journal* of December 29 does not expect much from America. It says: We have so much to bring over from America, so many vital necessities of all sorts, that it is not an economical proposition to import timber when we can get what wood we require from other quarters. We fear, therefore, that it is in the highest degree unlikely that the trade will receive facilities for the importing of American wood next season. Special supplies for the Government for aeroplane work, etc., will be shipped, but even in the event of peace we do not anticipate any large import from America for general purposes. As dunnage, and as deck-loads, a little wood will be brought in from time to time, but this will be about the extent of what can reasonably be hoped for.

Ten Months of Timber Exports

The exports of timber and lumber of all kinds from the United States during the first ten months of 1917, ending with October, were of a total value of \$54,378,046. The total during the corresponding ten months of 1916 was \$50,378,000, by which it is seen that the export trade improved during the latter year. Among the items in which the improvement was noticeable were the following, with export figures for the first ten months of the two years:

	1916	1917
Fir lumber	\$2,705,884	\$3,236,733
Shingles	49,180	86,606
Wood pulp	1,900,938	2,244,105
Spruce lumber	1,904,487	3,455,175

Fight with a Snake

Men who work in the woods in this country have reason to be thankful that they are not in the Philippines. The following item from a Philippine paper of last October explains why:

Roy Barto, formerly of the Bureau of Forestry, was attacked last week by a large python while he was cruising timber near Cadiz, Negros Occidental. Barto was walking along when the python seized him below his left knee and began dragging him nearer. Before the snake could throw a coil around him, he managed to secure his bolo and struck it a glancing blow, whereupon the python released its hold. Barto then cut a pole and for two hours tried to kill the snake, which repeatedly charged him with its head raised two feet higher than Barto. Only by his strength and agility did he avoid these rushes. The python finally retreated into its den and Barto then secured a rifle and assistance. Upon their arrival at the den the snake made another vicious charge and was killed. The skin is 24 feet long and two feet wide, and Barto is being congratulated upon his narrow escape, for had he been but a few feet nearer the snake's first attack might have proved more effective.

Germany Needs Airplane Stocks

Evidence increases that the Germans are having difficulty in procuring wood for airplanes. An engineering journal in England has collected data from German machines that have been captured, and it is found that woods are being used that would be regarded in America as wholly unsuitable. Among other woods they are using oak, and some of it is of inferior grade. They still can get a little ash for parts which receive the greatest strain, but in order to do this they often splice two or three pieces together to get the necessary length. Much yellow pine, cut in Germany's forests, is being used for this work. Some of the machines contain little wood except pine. It has been noted for some time that the German airplanes seemed to be deteriorating in their wooden parts.

The motors and metal parts seem to be up to standard; but when the strain comes during fights and quick dives and turns, the wooden frame often exhibits a fatal weakness.

American Lumber Prospects in England

John R. Walker is the first of the five American lumber commissioners who were sent abroad by the United States, to make a report, so far as information has reached the *HARDWOOD RECORD*. Mr. Walker began his work in England, and under date of December 17 he wrote from London a report of which a summary follows:

One bar to larger British purchases of American lumber has been the fact that the sizes of American scantlings differ from those commonly used in the United Kingdom. The American standard sizes have been evolved as those best adapted to the characteristics of American timber. If the building practice in the United Kingdom could be changed to conform to the manufacturing practice in the United States, our ability to assist in supplying materials for reconstruction will be enormously increased and a saving will be effected in timber, tonnage and money. This matter has been brought to the attention of the British industry and the change is under consideration.

It is estimated that 500,000 new houses will be required in the British Isles at the conclusion of the war. This need is the result, first, of legislation affecting real estate, which greatly curtailed building operations in the years immediately preceding the war; secondly, of the cessation of building operations during the war; and thirdly, of a general demand among the working classes for better housing, due to the prevailing high wage scale and to the education in living conditions and sanitation received by the soldiers.

Chinese Sawmill Laborers

The Madera Sugar Pine Company, Madera, Cal., recently published an interview in a local paper in defense of Chinese labor. The company has long been an employer of this class of labor, some men having been continuously in its employ eighteen years. The company declares that it would be next to impossible to run its mills at the present time without Chinese labor, the company having furnished fifty-three men for the army, and white labor being scarce and unreliable. It has a Chinese boss, who has charge of his countrymen in the company's employ. The mill owner said in the interview:

To successfully handle Chinese labor, it is necessary that the Chinamen be allowed to follow their own habits of life as far as possible. For this reason we have built for them their own camp, which is located entirely apart from the sawmill town. The Chinese purchase their own food supplies, hire their own cook and conduct their camp according to their own ideas and standards. They are not interested in hunting, fishing, dancing or automobile driving, and are not given to drinking or carousing, but look to certain games of chance for their amusement.

In all dealings with Chinese laborers we have never found any of them incapacitated by dissipation. They are always able to work when called upon to do so, and seem much more willing to accommodate themselves to occasional hardships than any other class of people. Because of the disposition on the part of the Chinese laborer to work steadily, the Chinese have proved themselves most essential to the company's operations. Many of them are thoroughly skilled workmen and it would be almost impossible for the Sugar Pine Company to replace them from any other known source of labor supply. The company feels that production would be greatly increased if certain other classes of labor were to show the same faithfulness, loyalty and devotion to work.

I wish to disabuse the public mind of any notion that may be had that the Chinaman is, in any sense of the word, criminal in his nature. He has been found to be strictly honest and truthful in all his dealings, and a valuable workman, and unless aroused by unjust treatment, is quiet, peace loving and gentlemanly in his conduct, and inclined to associate only with his kind.

Unfair Competition Charged

The first lumber case involving charges of unfair competition was recently heard by the Federal Trade Commission in Washington, D. C. The commission had made a formal complaint against the Botsford Lumber Company, and about one hundred other defendants, principally retail dealers, and including Platt B. Walker, editor of the *Mississippi Valley Lumberman*, Minneapolis, Minn. Most of the defendants live in Minnesota. The case is an outgrowth of the long fight between western retail lumber yards and mail order houses, competing with them. Chief Examiner Chautland had charge of the case against the lumbermen; Stanley Houch represented Walker; L. L. Brown, Charles Fowler and L. C. Boyle for the lumbermen. Evidence was presented, laws were quoted, jurisdiction was discussed, and arguments were presented by the attorneys, and the decision of the case will be awaited with interest. The methods followed by mail order houses in securing and carrying on business were brought prominently forward in the hearing of the case.

After War Cost of Lumber

The United States commercial attaché at Paris has made a report setting forth the views in France regarding the cost of various building materials after the war. On the subject of lumber he says:

With regard to wood, it should be noted that French forests have been subjected to an unusually intensive and often uneconomical exploitation, and that the abnormal consumption caused by the large-scale construction of barracks and provisional edifices will leave a deficit in the supply. It will take many years to overcome the deforestation that has gone on during the war. As for the use of wood from the French colonies, the government is preparing a law to facilitate the importation of such woods, but the cost of transportation and the increased cost of labor will very probably result in bringing the price of this wood to a level that will exceed by at least one-third the prices prevailing in 1914. Wood from Sweden and Norway, the price of which is exceedingly high, will be demanded throughout Europe, and can not be furnished in sufficient quantities. Even though, in spite of these factors, there should be a reduction in the price of lumber, the abnormally high price of labor will more than offset any such possibilities, and the price of building timbers, even though it may be somewhat less than the present prices, will in any event be considerably higher than in 1914.

Hardwood News Notes

< MISCELLANEOUS >

The Pardee & Curtin Lumber Company of Sutton, W. Va., will resume work in the spring on the extension of its railroad to a point below Brock's Ferry, giving service to Summersville.

The Arkansas Oak Flooring Company, Pine Bluff, Ark., has started work on an addition where will be manufactured material for cases, boxes, crates or any dimension stuff. The plant will be in operation within sixty days.

The Kaye Carving Company, manufacturer of school and church furniture, which has been located at Grand Rapids, Wis., is now moving to Green Bay, Wis. The company burned out at Grand Rapids a short time ago.

At Androscoggin, Me., the B. C. Jordan Lumber Company has incorporated for \$75,000, and at Whiting, Me., the Whiting Lumber Company is a recently incorporated concern.

The style of the L. M. Young Lumber Company of Boston, Mass., and Bangor, Me., has been changed to the I. M. Pierce Sales Corporation.

The American Shipbuilding Corporation has been incorporated at Alexandria, Va.

The Kentucky & Tennessee Lumber Company at Somerset, Ky., has been succeeded by Elmer C. Ballinger.

The capital stock of the Dennis Lumber Company, Grand Rapids, Mich., has been increased from \$30,000 to \$250,000.

The Cassopolis Ladder Company has changed its name to the U. S. Woodenware Manufacturing Company and moved from Cassopolis, Mich., to Three Rivers.

< CHICAGO >

Among Northern lumbermen who visited Memphis during lumber week were George F. Kerns, Geo. F. Kerns Lumber Company, Fisher building, Chicago, and J. W. Thompson of Rockford, Ill.

Lawrence DeGolyer, president of the Ward Lumber Company, Chicago, was also in attendance at the Memphis meetings, having been South for the past couple weeks.

John B. Utley and Glenn H. Holloway of the Chicago firm, Utley-Holloway Company, were in Memphis during lumber week, and also visited their new mills at Clayton, La., which will shortly be opened.

Chas. Ransom of the Gayoso Lumber Company, Memphis, passed through Chicago the early part of last week on his way back to Memphis after a much delayed trip. Mr. Ransom stated that it took him sixty-two hours to get from St. Joseph, Mich., to Chicago.

A. M. Richardson of the A. M. Richardson Lumber Company, Helena, Ark., was another southern traveller who got stalled by northern snowstorms. He was one of the party of lumbermen who converted the evening train from Chicago to Memphis into a lumbermen's special on Tuesday of last week.

A receiver has been applied for for the Republic Phonograph Company, Chicago.

John M. Woods of East Cambridge, Mass., T. M. Brown of Louisville and Payson Smith of Minneapolis were among the prominent visitors to the city within the last few days. They attended the meeting of the board of governors of the National Hardwood Lumber Association here and left on January 23, accompanied by Frank F. Fish, secretary of the association, for the Indiana hardwood annual held at Indianapolis, on January 24.

C. A. Bigelow of the Kneeland-Bigelow Company, Bay City, Mich., was in the city this week in attendance at the board of governors' meeting of the National Hardwood Lumber Association.

< MEMPHIS >

The Smith-Carothers Lumber Company has secured an amendment to its charter providing for an increase in its capital stock from \$10,000 to \$30,000. This instrument, which is signed by the principal incorporators, has already been filed with the proper authorities for recording.

The DeSoto Hardwood Flooring Company has recently filed application for an amendment to its charter, seeking an increase in the capital stock from \$50,000 to \$150,000. This is in accordance with action taken by the stockholders at the annual meeting held here January 8. All of the old officers were re-elected as follows: John W. McClure, president; R. A. Taylor, vice-president and general manager, and George O. Friedel, secretary-treasurer.

The Adams Machine Company, Corinth, Miss., according to W. T. Adams, president, has almost recovered from the fire which severely damaged its plant several weeks ago and will be able to operate at normal capacity in the near future. "This is one of the largest machine companies in this part of the country."

The Wynne Coopersage Company is building a hoop plant at Wynne, Ark., which will be ready for operation as soon as the weather permits. The company is controlled by business men from Anderson, Ind., who were induced to come to Wynne by the Commercial Club.

W. H. Russe of Russe & Burgess, Inc., and R. L. Jurden of Penrod,

Jurden & McCowan, Inc., left Memphis January 19 for New York, where they will attend the annual of the National Lumber Exporters' Association. They left early in order that they might have a day or two in Washington. R. H. Darnell and other members of the association left for New York several days later.

John M. Pritchard, who came to Memphis to attend the annuals of the gum and oak associations, and who was elected secretary of the successor to these organizations, the American Hardwood Manufacturers' Association, has returned to Washington to resume his duties as manager of the Southern Hardwood Emergency Bureau. He was given leave of absence by the new association for the period of the war. Interesting information given by him in regard to the needs of the government, directly and indirectly, for lumber will be found in the report of the annual of the Gum Lumber Manufacturers' Association published elsewhere in this issue of the HARDWOOD RECORD.

W. A. Ransom of the Gayoso Lumber Company, who is one of the members of the Southern Hardwood Emergency Bureau agreeing to give two out of every six weeks of their time to the affairs of that organization, has gone to Washington for his period of service in that connection.

Practically all the out-of-town lumbermen who attended the annuals held here during "Lumber Week" have returned to their homes. They all declared they had had a royal time, that Memphis had discharged her duties as host in a most charming manner and that the annuals had set in motion machinery which would accomplish vast good for the hardwood lumber industry in general and that would greatly advance the cause of uniform inspection in particular.

< BUFFALO >

Some thirty vessels, mostly from Buffalo, are to be sent from the Great Lakes to the ocean next spring, it is reported. The names of the vessels are not yet known. This will further handicap the lake-shipping trade, but none of the boats taken are expected to be from the lumber fleet. Some of them, however, have ordinarily carried a large number of shingles, though the movement during the past season was much smaller than for years.

W. G. Palmer, Inc., North Tonawanda, has been quite active recently in manufacturing munitions needed by the government. The force of employees has been increased from 50 to 200. On account of the expansion of the business in war supplies, additional space has been taken at the plant of the Palmer Lumber Company, in Rochester, where additional machinery has been installed.

Some of the Jamestown, N. Y., furniture factories have been unable to keep in operation recently, because of the scarcity of cars. Fuel has also been scarce. Most woodworking plants in this section have found the fuel problem a hard one to solve.

The scarcity of coal has turned attention to wood for fuel and an occasional load of wood is seen on the streets. In this city this industry has been almost entirely laid aside. Wood even for fireplaces was hard to get and commanded fancy prices. The people are now sorry that forests have not been better preserved, but instead of undertaking their protection now the prospect is that they will be cut down more ruthlessly than ever. Trips across the state show many handsome forests of small trees, which have of late been protected and considerably improved in appearance and value.

It is now in order to talk about the farmer's woodlot, something which every farmer wishes he had. Many a semi-abandoned farm in New York state would be much more valuable in timber than under cultivation.

The Olean (N. Y.) Planing Mill Company filed a petition in bankruptcy in Buffalo lately, with liabilities of \$22,163.24. Assets are \$55,675, of which \$44,000 is represented by real estate.

Orson E. Yeager was recently elected president of the Buffalo automobile club, which is the largest organization of the kind in the world, with a membership of over 4,000.

R. D. McLean of the McLean Mahogany & Cedar Company, has been spending several weeks in the South. He has been looking after the shipment of an export order in hardwoods.

< PITTSBURGH >

J. C. Linehan & Co. is the name of a new wholesale concern here organized by J. C. Linehan, F. A. Gallagher and T. M. Harrington, all of this city. Mr. Linehan was formerly secretary of the old Linehan Lumber Company, one of the best hardwood men in western Pennsylvania. Mr. Harrington was formerly with the Western Lumber Company of this city. Offices will be established at once.

J. H. Hackenbush, formerly assistant purchasing agent of the Pressed Steel Car Company, and well known to every wholesale lumberman in Pittsburgh has been promoted to purchasing agent of that concern to take the place of H. J. Gearhart who died a few weeks ago.

J. F. Balsley, formerly well-known hardwood wholesaler, of this city with E. T. Morton and A. C. Stickell of Connellsville, Pa., have organized the Fayette Mine Car Company, capital \$50,000. The company will manufacture mine cars on a large scale and will take over the factory of the former Fayette Lumber Company at Connellsville.

Joshua Sykes, for many years one of the best hardwood lumbermen in northwestern Pennsylvania, died last week at his home at Conifer, Jefferson county, Pa., aged eighty-five years.

The American Lumber and Manufacturing Company is making rapid deliveries on its big government order for shipbuilding stock. In addition to shipping a large amount of fir from the Northwest, President W. D. Johnston is hurrying shipments of yellow pine from his mills at Paxton, Fla., and also large shipments of lumber from the company's plant at Lenox, Ky.

John J. Steinmetz, a pioneer wagon manufacturer of Braddock, Pa., died recently. For a quarter of a century he had been a large buyer of good hardwood lumber.

The Frampton-Foster Lumber Company, Bessemer building, has again enlarged its offices and now it occupies an entire one side of a floor in that big building. Considering that only five years ago the company had one single office room, its growth has been very encouraging and Col. P. M. Frampton, manager, was so pleased lately that he took unto himself a new wife.

J. N. Woollett, president of the Aberdeen Lumber Company, looks for a decided increase in business in the sale of gum and cottonwood this year. This will be largely due, Mr. Woollett says, to the increasing demand for these stocks for gun and artillery uses for the government.

◀ BALTIMORE ▶

Several of the lumber organizations having postponed their meetings on account of the curtailment of the train service by the railroads of the country, it had been suggested that the National Lumber Exporters' Association might do likewise, but such will not be the case. The annual of the N. L. E. A. will take place at the appointed time, next Wednesday and Thursday, at the Hotel Martinique in New York, and it is expected that a full attendance of members will turn out. Many matters of the greatest importance to the exporters are certain to come up, and a full interchange of ideas on them is urgently desired. Reports on existing conditions and the results of the year will be submitted by the officers, and it is expected that those of the Secretary, Harvey M. Dickson, and of the foreign representative, Frank Tiffany, located in London, will prove of exceptional importance.

The Board of Aldermen of Frederick, Md., has asked State Forester F. W. Besley to prepare a form and submit prospective bidders for all the chestnut timber on the city's watershed, about 1,200 acres, in the mountains near Frederick. This action was taken at the suggestion of Mr. Besley, who informed the aldermen that the chestnut blight has practically ruined the trees and that there is no known way to stop the disease. The timber on the Fishing Creek tract, containing some 5,500 acres, is estimated to be worth about \$45,600. In the Tuscarora locality there is \$14,000 worth more timber.

The parlor furniture and couch frame factory of George Gassinger, at 920 Clifford avenue, this city, was damaged \$15,000 by fire on January 9. Mr. Gassinger has already made arrangements to rebuild.

For the first time in many months exporters of this city were called upon to entertain foreign visitors ten days ago. These callers were J. Crosbie Foster, of William Richards & Co., timber brokers of Liverpool, and M. J. Sapperstone, of the Liverpool Hardwood Company. Both came not so much to place orders as to have a close view of the lumber trade situation with a regard to the prospects later on, and to see about some shipments they have contracted for. Both called on Secretary Dickson, of the National Lumber Exporters' Association.

A timber deal involving the sale of some 5,000 acres in the neighborhood of Custis, Braxton County, W. Va., as well as a railroad, two sawmills and a store, has been concluded between Harmount Hall & Co. and the Moon Lumber Company, the latter taking over the property.

J. McD. Price, formerly secretary of the National Lumber Exporters' Association, and now engaged in the wholesale hardwood trade, is mourning the death of his brother, Marcy McDonald Price, which occurred January 9 at Hartford, W. Va. Mr. Price was 48 years old and vice-president of the Hartland Collieries Company. He was a son of the late Winfield S. Price, widely known in the hardwood trade.

The Grover Carr lumber camp near Whitmer, W. Va., on the Dry Fork branch of the Western Maryland railroad, was destroyed by fire on January 11. Miss Ella Carr, daughter of C. C. Carr, lost her life. The blaze was caused by the mistaken use of gasoline instead of oil to oil the wood stove. An explosion ensued and the whole camp was in a blaze almost at once.

◀ COLUMBUS ▶

John S. Maclean, a lumber merchant and manufacturer of millwork of Columbus, has brought a suit against the American Chain Company, claiming that because of sparks and smoke issuing from its sixteen smokestacks his plant and stock of lumber are in danger. The Maclean plant adjoins the chain company, which recently experienced a disastrous fire.

The Scioto Lumber Company, Portsmouth, has been incorporated with a capital of \$15,000 to deal in lumber. The incorporators are V. S. Taylor, O. E. Van Meter, L. C. Smith, Mundane Zuhars and Vera I. Purdy.

The Taylor-Smith Lumber Company, Portsmouth, has been incorporated with a capital of \$10,000 to deal in lumber. The incorporators are Vera I. Purdy, Mundane Zuhars, V. S. Taylor, Frank W. Moulton and L. C. Smith.

R. W. Horton, of the W. M. Ritter Lumber Company, reports a good demand for hardwoods generally speaking. The worst feature at this time is the inability of railroads to handle shipments. Dealers would buy

if assured of movement. Manufacturers of boxes, implements and vehicles are in the market for certain kinds of hardwoods.

Because of the order of Fuel Administrator Garfield providing for fuelless days on Mondays for some time, the Columbus Real Estate and Building Show, which was to have started January 21 to continue until the latter part of the month, was not started until January 23. Great preparations have been made for the show and despite congested railroad traffic many exhibits are shown. One of the features of the show is the large lumber exhibits.

The Powell Lumber & Construction Company, Columbus, has increased its capital from \$25,000 to \$50,000.

The C. A. Mauk Lumber Company, Toledo, has increased its capital from \$100,000 to \$150,000.

◀ INDIANAPOLIS ▶

Two petitions were filed last week for the appointment of a receiver for the Clark, Randall & Miles Chair Company of Shelbyville, Ind., although it is reported on authority that the company is in excellent financial condition. George C. Miles, secretary-treasurer of the company, who has been acting as general manager of the business, filed his questionnaire with the county conscription board, and although married, and the head of a large business operation, he refused to ask exemption or for deferred classification. Mr. Miles owned ninety-eight per cent of the stock of the company. Alleging that Mr. Miles' services were needed for the successful operation of the plant, the Southern Lumber & Boom Company of Cincinnati, O., and Charles and Arthur W. Spiegle of Shelbyville filed petitions for the appointment of a receiver. Herbert C. Jones was appointed receiver for the company temporarily. Frank Gavin Clark of Indianapolis is president of the company.

Fire last week destroyed the mill of the Greer-Wilkinson Lumber Company at Franklin, Ind., causing a loss estimated at from \$8,000 to \$10,000. The fire is believed to have been caused by an overheated boiler. A large quantity of lumber was stored near the mill, but most of this was moved away before the flames reached it. Most of the loss was covered by insurance. Officials of the company said that the plant would be rebuilt as soon as possible.

The A. Fromme Lumber Company of Terre Haute, Ind., has been incorporated with a capitalization of \$50,000 to deal in lumber and building materials. Directors of the company are Arthur H. Fromme, William S. Bullock, John L. Crawford and Samuel K. Duvall.

The park board of Indianapolis learned recently that Henry W. Long, a wealthy hardwood lumberman who died here a few years ago, had left a provision in his will providing a gift of \$10,000 to be used in the erection of a monument to Abraham Lincoln in one of the downtown parks of the city. The fund has been held in trust at a local bank for more than four years. The park board now is planning to erect the monument.

The Rochester Lumber & Coal Company of Rochester, Ind., recently opened up new buildings that have been equipped as a service department. The company conducted a formal opening, issuing invitations to the public to attend to inspect the plant.

◀ EVANSVILLE ▶

George O. Worland, secretary and treasurer of the Evansville Veneer Company, has returned from a business trip to Memphis. He says that barring bad weather conditions of a week or ten days ago trade has been very good. The log shortage as well as the inability to get cars is worrying the veneer manufacturers just now.

The heaviest snowfall in the history of southwestern Indiana was reported on January 14, when twenty inches fell in Evansville and vicinity. This brings the total snowfall of the season in that section up to over sixty-two inches, which breaks all records. The snow was so deep that all railroads, traction lines and city street car lines were put out of business for the time being and several large wood consuming plants were unable to operate.

Otto Mendel has accepted a position as salesman with the Evansville Band Mill Company and will travel in this territory. He has also become a member of the Evansville Lumbermen's Club.

George A. Cunningham, assistant manager of the Never-Split Seat Company, who for several months has been a sergeant in the national army at Camp Zachary Taylor at Louisville, Ky., has been recommended for the officers' training camp.

Perry Hall has opened an office and lumber yard at English, Ind., and reports he is now ready for business. He is well satisfied with his prospects and believes English is a good field.

Joseph L. Eckstein & Sons, owners of a sawmill at Jasper, Ind., have bought the Peter Frick farm near Bretzville, Ind., on which there is a big lot of virgin timber that will be cut and hauled to the company's mill at Jasper. The consideration was \$11,000.

The Imperial Desk Company has filed a notice with the secretary of state of an increase in capital stock from \$100,000 to \$200,000. The company will make a number of improvements around the plant.

The residence at 810 North Garvin street of William S. Partington, of Mailey & Wertz, and secretary and treasurer of the Evansville Lumbermen's Club was completely destroyed by fire on Friday night, January 11, the loss being about \$3,000 with part insurance. The cause of the fire has not been ascertained.

of the Karges Furniture Company and other capitalists at Evansville have bought the controlling interest in the Schroeder Headlight Company in Evansville and assumed charge on January 14 with William A. Carson as the new manager. The plant will be enlarged. The Schroeder Headlight Company during the past three years has been manufacturing many locomotive headlights for the Allies and will continue to do so.

John Alloway, aged ninety-four years, one of the best-known men in western Kentucky, died recently at his home at Clay, Ky. Two of his sons who survive him are engaged in the lumber business, Frank Alloway being at Clay and Fred Alloway at Sturgis, Ky.

The regular monthly meeting of the Evansville Lumbermen's Club will be held on the second Tuesday night in February at the Hotel McCurdy, when the log shortage question will be discussed. John C. Keller, traffic manager of the club, will make a short talk on the government control of the railroads.

The VonBehren Manufacturing Company is making spokes and hubs for the federal government and expects to fill several large orders during the present year. The C. P. White Manufacturing Company at Boonville, Ind., is also working on a government order making the wooden parts of guns for the army. Walnut lumber is used in this line of work. The Never-Split Seat Company of this city has furnished seats for every military cantonment in the United States, it is announced. During the past year this company has also sold seats in Canada, Australia, New Zealand and many other countries.

◀ LOUISVILLE ▶

The first January meeting of the Louisville Hardwood Club was given over largely to discussion of traffic matters, inability to ship government orders, and the drafting of a wire to Secretary McAdoo, director general of railroads, asking for relief in handling government orders, stating that even where such orders carried the government contract number of bills of lading the carriers were refusing them. Discussion was also heard concerning the new demurrage rates, which it is believed will aid somewhat, and the members were generally of the opinion that Secretary McAdoo would shortly unravel the traffic problem. The shortage of log cars in the South was also discussed, but there appears to be little relief in sight at the present time. At this meeting George Wilcox, representing the I. B. Wilcox Lumber Company of Louisville, was admitted to membership in the club.

An answer has been filed by the Hillerich & Bradsby Company of Louisville, manufacturer of baseball bats and golf clubs, to a charge made by

the Federal Trade Commission that it had fixed prices. In answer the company stated that the dealers themselves fixed the prices, and that about ninety-eight percent of the dealers fixed their prices so that they could make a reasonable profit, which could not be made otherwise. The company claims full power to select its customers under the last paragraph of the act, and that this has been done, but not in restraint of trade.

The Kentucky legislature, which is now in session, has been so busy drafting a state wide prohibition amendment that it hasn't had much time for anything else, and outside of the prohibition amendment and regulation of railroads, very little has been undertaken, as national conditions are such that the legislature is going slowly so as not to upset things any more than possible. However, one bill that has been introduced will probably be warmly opposed by the lumber interests, this bill being "An act abolishing the office of forester in the state of Kentucky," introduced by R. T. Smith. There is no doubt but what the office has been a big thing for the timber and lumber interests. Through its efforts the annual fire loss to timber has been greatly reduced, while on the other hand it has greatly increased the movement to replant forest lands, and has been instrumental in getting some of the large coal companies to endeavor to reforest their lands. The cost of the office to the state is not great.

Amended articles of incorporation have been filed by the Louisville Planing Mill & Hardwood Flooring Company changing its name to the Louisville Planing Mill Company. This company is planning to rebuild its planer, sawmill and veneer mill, which was burned in December.

Bond Brothers of Elizabethtown, Ky., dealers in ties and timbers, have purchased 5,200 acres of timberland at Decatur, Ala., and are planning to install machinery to cut ties and bridge timbers.

Damage of \$3,000 was recently done to the plant of the Owensboro Planing Mill Company, Owensboro, Ky., by fire, which broke out early in the evening. Due to the fact that the mill proper is of brick and concrete, with gravel roof, no insurance was carried on the building. Most of the damage was to belting and machinery.

The five-day shut-down ordered by the Fuel Administration is being fully complied with by all lumber concerns of Louisville, many of which were on the point of closing down when the order was announced. With traffic in such shape that even government orders could not be moved, many concerns were in favor of closing down until some of the stuff could be shipped, and it is said that aside from being patriotic the trade is of the opinion that this shut-down will result in freer movement later on. The order could not have come at a more opportune time for most of the local concerns, as with eighteen inches of snow on the ground, and traffic generally demoralized, it was impossible to have cars switched even in the local yards, get stock in or finished material out. Logging conditions in

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

eastern Kentucky are very bad, and there is a general shortage of log cars all through the South, resulting in many mills being short on logs at the present time. It is possible that many of the mills will be enabled to operate on Mondays in the future, as it is understood that an exception is to be made for concerns operating on steam supplied from burning wood waste only.

◀ ARKANSAS ▶

Heavy snow fall, accompanied by the longest spell of exceedingly cold weather in a score of years, has practically shut down all operations. Most of the streams in Arkansas, as well as logging ponds at the lumber mills, have been frozen over for several days, making operation impossible. The shortage of cars has made it next to impossible for the manu-

facturers to move their shipments. The fuel shortage has not been a serious matter to the lumber mills, as they for the most part burn their own waste for fuel. It is believed by most of the lumbermen of this section that the taking over of the railroads by the government will ultimately help to relieve the car shortage. The movement of export to southern ports, as proposed by the director general, it is thought, will give abundant supply of cars to lumber mills in this section for moving their material North.

E. A. Parker of Benton, Ark., recently sold his interest in the Greenville stave mill to the Pekin Cooperaage Company, and will now devote his time exclusively to the operation of the E. A. Parker stave mill.

The Arkansas Association of Lumber Dealers is planning to hold a district meeting in Little Rock, at the Marion hotel, on February 5. The principal speaker for the occasion will be J. C. Dionne of Houston, Texas, who has for a number of years been connected with the Texas Lumbermen's Association.

J. H. Harris of the J. E. Harris Lumber Company, Wynne, Ark., has enlisted with the 20th Engineers (Forest) and is now in training at Camp American University, Washington, D. C., preparatory to sailing for service in France.

◀ WISCONSIN ▶

The United States Aero Propeller Company, Milwaukee, has been incorporated with a capital stock of \$30,000 to engage in the manufacture of propellers and other wooden parts for aeroplanes. The identity of the promoters is not revealed. The articles were signed by members of the law firm of Bottum, Bottum, Hudnall & Lecher, Pabst Building.

The D. E. Britton Cooperaage Company, Green Bay, Wis., is erecting a one-story frame sawmill, 30x90 feet in size, to provide much-needed capacity.

The Hardwood Products Company, Neenah, Wis., has increased its capital stock from \$40,000 to \$750,000 to accommodate the extensive growth of its business and interests since the former capitalization was originally fixed. The capital now consists of \$350,000 of 7 per cent preferred and \$400,000 of common. E. D. Beals is president and C. B. Clark is secretary of the company.

The Great Northern Pail Company, Gillett, Wis., has appointed F. F. Koske as general manager, and reduced the burden of duties upon Walter W. Smith, who has occupied the positions of general manager and works manager for some time. Mr. Smith henceforth will devote his entire time to supervising all manufacturing operations.

C. C. Robinson, St. Paul, Minn., is organizing the Wood Products Manufacturing Company with a capital stock of \$50,000 to establish a wood-working plant at Luck, Polk county, Wis. The company will specialize in berry boxes, honey crates, veneers, etc., and plans to build a plant in Luck, where a two-acre site has been purchased.

The Joseph Siesel Lumber Company, town of Wilson, Sheboygan county, Wis., has changed its name to Wachsmuth Company, following the purchase of the entire interest by Herman Wachsmuth, Sheboygan. The sawmill will be enlarged.

The Universal Shipbuilding Company, Sturgeon Bay, Wis., has been incorporated with a capital stock of \$1,500,000 by Gustave A. Huck, who recently acquired an option, returnable February 1, on the yards and plant of Rieboldt, Wolter & Co., wooden shipbuilders, Sturgeon Bay. The new owners intend to greatly enlarge the capacity and accommodations of the yards. Rieboldt & Wolter will complete boat No. 61, now on the docks and to be out May 1.

The Shawano Lumber Company, Shawano, Wis., is contemplating the erection of a new planing mill as a matter of economy in handling and shipping manufactured lumber. Two sidetracks have been in stalled, one for logs and the other for lumber.

The Kiel Woodenware Company, Kiel, Wis., is cutting 1,000,000 feet of elm, basswood and soft maple timber on its lands at the Ox Bow, on the Michigan side of the Menominee river near Wausaukee, Wis. The input will be shipped to the main plant at Kiel for veneer manufacture, the rougher stock being used for cheese boxes and similar goods.

John Kadletz, Shawano, Wis., has completed a new custom sawmill on the Chicago & North-Western line in that city and started operations on January 15. The mill will purchase logs and bolts in addition to doing custom work.

Emil Semling and Paul Leopold, Merrill, Wis., who recently formed a partnership under the style of the Merrill Hoop Company, have completed their new plant on Logan Avenue and undertaken a regular production of black ash hoops for butter tubs. The entire output has been contracted for by a large maker of butter tubs.

The Wisconsin Box & Lumber Company, Wausau, Wis., has resumed operations in its sawmill, which was shut down in November. To conserve fuel, the present working schedule is from 6 a. m. to 4:30 p. m., with a half hour out at noon, which relieves pressure upon the electric power company furnishing the current.

The A. Streich & Bros. Company, Oshkosh, Wis., manufacturer of heavy wagons, paid its employes a bonus of 10 per cent on 1917 earnings. At the beginning of last year the company intimated that it would pay 6

per cent, but its business prospered to such an extent during the year that the rate was increased to 10 per cent.

Charles Killian, New London, Wis., has reopened his sawmill at Sugar Bush, near that city, and expects to saw 500,000 feet of logs on his own account and about 350,000 feet for customers.

The Hatten Lumber Company, New London, Wis., has recently made delivery of one carload of 2½-inch selected birch for the manufacture of gunstocks to the Winchester Repeating Arms Company, New Haven, Conn., on government account. The Hatten company has been filling extensive government orders for eight months or more and is still engaged in such work.

The Mattison Machine Works, Beloit, Wis., manufacturing wood shapers and other woodworking machinery, has increased its capital stock from \$25,000 to \$225,000. The original capitalization long ago was outgrown, but an increase was made necessary at this time by reason of an extensive enlargement scheme undertaken by the company. C. W. Mattison is president and general manager.

The organization of the Murray-Mylrea Machine Company, Antigo, Wis., will have the effect of providing the numerous saw and planing mills in that city and surrounding territory with ample facilities for the manufacture and repair of machinery and equipment, heretofore sadly lacking. The new company has a capital stock of \$50,000 and was organized by J. C. Mylrea, secretary of the Langlade Lumber Company, and Donald J. Murray, Jr., until recently general superintendent of the Curtis & Yale Company, Wausau, Wis. The foundry and machine shops of the former International Hoist Company and Pioneer Iron Works at Antigo have been acquired and are being put in shape for commencement of operation on February 1. Manager Murray has had wide experience in the business, having formerly been connected with the D. J. Murray Manufacturing Company, Wausau. The initial working force of the new plant will be between forty and forty-five men, most of them highly skilled in the production and repair of woodworking machinery.

The Webster Manufacturing Company, Superior, Wis., recently reopened its big chair and furniture factories after a short shut-down for repairs, overhauling, etc. The orders recently booked will keep the plant busy at capacity for many months and the company is hiring all of the available supply of workmen to supplement its regular full force.

Fred and George Revord, Irvine, Chippewa county, Wis., have purchased the machinery and equipment of the former Wilcox mill on the Chippewa river and will build a new mill at Irvine, to be ready about March 1.

With the exception of the mill of the Kellogg Lumber Company, which has no hot pond at its Antigo mill, all of the big sawmills in Antigo are now in full operation and expect to keep running on this schedule until next fall.

Walter Alexander, Wausau, Wis., has retired as a director of the First National Bank of Milwaukee because of the press of his other interests, which made it impossible to attend the meetings in Milwaukee as frequently as desirable. Mr. Alexander is secretary and treasurer of the Alexander-Stewart Lumber Company, Wausau, and numerous other important logging and lumbering interests in the North and South.

William D. Connor, Marshfield, Wis., president of the R. Connor Company, and widely known lumberman, has been elected president of the First National Bank of Stevens Point, Wis., to fill the vacancy caused by the death of Andrew R. Week. Mr. Connor has been a director and stockholder for more than twenty years.

E. D. Beals, president of the Hardwood Products Company, Neenah, Wis., has been commissioned a lieutenant in the Naval Officers' Reserve Corps and will report for active duty at Washington on February 1. For the present his work will be in the naval ordnance department.

C. O. Frisbie, president of the Cornell Wood Products Company, Cornell, Wis., left for Washington recently to confer with government officials with regard to the water power problem. For many years the owners of water powers on the Chippewa river have sought permission to build a large reservoir to make possible a greater development of power. It is expected that under the conditions now existing the government may extend the required permission.

The Hardwood Market

< CHICAGO >

Chicago lumbermen have not much to say as to any changes in the situation since the last issue of *HARDWOOD RECORD*. The tie-up of traffic and industry occasioned by the shut-down has rather held things in abeyance so that there is no way of telling yet whether government regulation has made possible any changes in the shipping situation. The trade here, though, is confident that as soon as government direction with its attendant advantages is given full opportunity for making itself felt, the car situation will be materially improved. At present trade is proceeding without noticeable changes, but with the prospect that there may be some improvement in the building situation as the spring months develop, even though such improvement may be small in proportion.

< BUFFALO >

Transportation difficulties are causing much delay and inconvenience in the hardwood trade. Things are expected to be tied up until better weather arrives. Many concerns are in need of lumber, but find it impossible to get delivery. Prices are holding at a firm level.

The war industries are taking a large part of the lumber now being sold and they are much in need of certain stocks for prompt delivery, the demand continuing in several prominent woods, including oak, maple, ash, poplar and birch. Large stocks of poplar in local yards have been bought lately by representatives of the British government. The United States government has also been taking low-grade chestnut here for crating stock. Cypress has been in fair demand and some has been sold for export.

< PITTSBURGH >

Hardwood matters are very much upset to say the least. Considerable demand is in evidence but it is irregular and comes from sources which cannot be looked to for regular demand. The automobile trade is badly off and furniture manufacturers are not buying as much stock as was expected. On the other hand bridge timbers, railroad timbers and general stocks, especially of oak for manufacturing purposes, are in pretty good call. Some of these stocks are very hard to get. Prices are going up and it is a big question whether in spring mills will have enough lumber to take care of demand. The outlook for the gum and cottonwood is especially good as large amounts of this lumber are being used for war purposes. There is little new building being planned.

< BOSTON >

An analysis of the hardwood market in New England at the present time would not be practical or disclose any dependable guide to developments. Operating under continually restrictive conditions for many months, the trade is not able now to fix any limits to which the situation may proceed. Traffic so far as lumber is concerned is virtually at a standstill from the causes prevailing in all the eastern country and this, added to the stopping of the consuming patronage, takes away any remaining working field for either wholesale or retail trade, except government business. It is expected that remedial measures will become effective as soon as federal control has had an opportunity to do so.

< BALTIMORE >

Quiet has prevailed so far this year, the severity of the weather and transportation troubles having combined to check the movement. Mills and distributors have found themselves greatly hampered in their operations, and the outlook is so uncertain that no one will venture to make predictions as to the future. That a decided narrowing of the distribution as against some months ago has taken place admits of no doubt. Even the buyers who would have liked to place orders were unable to do so for the reason that the sellers could give no guarantee that delivery would be made within a definite period. Much snow and intense cold held down the work at the mills and prolonged the end of the year holidays far beyond the usual period. Even since then most of the plants have found their capacity greatly curtailed, and it is to be doubted if the production has attained fifty per cent of the normal. If the mills had been busy, however, it would not have availed them in so far as placing stocks is concerned, for embargoes have been imposed by the railroads most of the time, and the members of the trade have put in far longer hours working on the railroads to provide cars and accept shipments than in getting out orders. The difficulties of making shipment have naturally tended to stiffen prices. Any hardwood man in a position to make delivery was able to command almost his own terms, lumber being very urgently wanted in not a few instances. In the absence of any extensive accumulations of lumber and as a result of the impediments put in the way of the movement the scarcity of stocks in the hands of dealers and also of consumers is likely to persevere, with resultant attractive quotations. The holdings of the yards in this city have been reduced more or less of late, even though the shipments were mostly of a local character, stocks going to nearby points and being frequently shipped on auto trucks, where the distance was not prohibitive. This mode of delivery has greatly expanded in recent weeks, and there is every indication that auto trucks will come into even larger use unless very decided relief should be afforded soon as far as the railroads are concerned. As things are, the prospect is decidedly clouded, with inherent conditions of demand good, and with the production sufficiently curtailed to remove all probability that stocks in troublesome proportions will pile up at producing points and congestion will ensue.

< COLUMBUS >

The hardwood trade in Columbus and central Ohio has ruled strong during the past fortnight. Although there is only a small amount of stock moving, demand on the part of dealers as well as manufacturers would be good if assured of deliveries. In fact, the worst feature of the industry at this time is the lack of transportation facilities. Dealers who are anxious to lay in stocks for the expected spring building season are slow to proceed if not assured of prompt movement. Manufacturers making boxes and implements are good customers. The same is true of vehicle factories. Furniture factories are expected to be in the market in the

Lacey Reports

for the

Timber Seller

It is no better commercial practice for you to sell a tract of timber (which may contain a million feet more than you think) on the basis of an old time "timber cruise" than it is for some one else to buy one (which may contain a million feet less than he thinks).

To be in a position to certainly realize the maximum on any sale is first to know exactly what you have to sell. Then a price means something.

A LACEY REPORT on your tract will give you the nearest approach to absolute knowledge of stumpage values possible by human means, and the very existence of your LACEY REPORT will justly give the buyer implicit confidence.

38 years' experience in timberland transactions: consult

James D. Lacey & Co.
INTERNATIONAL TIMBERLAND FACTORS

in Evansville are at a standstill and not much improvement along this line is expected until early spring. Plow manufacturers report a heavy trade. Carriage and wagon manufacturers have a fair amount of business just now but like the other manufacturers find they are greatly handicapped by the car shortage. Box factories continue to work on large government orders and have plenty of work ahead to last them several months.

MEMPHIS

The demand for hardwood lumber is active enough but there is little business doing because there is too much restriction as to territory where deliveries can be effected. All destinations in Central Freight Association and Eastern Trunk Line territory are embargoed and the same is true of all destinations in Western Trunk Line territory reached through the gateways at Chicago. St. Louis and Cairo lumbermen frankly admit that they are up against a situation with which they are unable to cope and that it is absolutely necessary that they await a clearing of conditions. Cars are being loaded with lumber in large volume at plants throughout this territory but lumber interests do not know when they will move. They are simply getting the lumber on cars as fast as possible so that, when the barriers are lifted, they can move without loss of time. Meanwhile, manufacturing operations are at a complete standstill over most of the Memphis territory while logging is faring little better, thus creating a production situation which is without parallel in the history of this part of the country. And, in the face of this practical paralysis of manufacturing operations, John M. Pritchard, manager of the Southern Hardwood Emergency Bureau at Washington, has brought the information that, while direct orders for lumber from the government are going to be comparatively small, there is going to be a tremendous demand therefor from manufacturers who have contracts for the production of boxes, wagons, wheels, trucks, airplanes, handles and other products needed by the government for the winning of the war. Lumber interests are therefore worrying a great deal more about how they are going to be able to produce lumber in volume than about being able to sell it when it is ready. They are maintaining their prices on a very firm basis because they realize the production handicap under which they are laboring and the scarcity of stock which prevails.

LOUISVILLE

At the present time there is very little doing on the local market, traffic conditions and weather conditions being of such a nature that very few mills are operating or in position to ship anything. Railroad embargoes block every avenue into the East and North and even government orders can't be shipped under existing conditions. There is a fairly active demand for hardwoods for immediate use, and after traffic conditions improve it is certain that the lumber trade will have a busy period. Orders on the books will keep many of the mills operating their shipping forces overtime whenever conditions reach a stage where logs are moving freely, cars plentiful and the roads open. The supply of box cars in the South is reported much better than it has been for some time, but the trade can't load the cars as delivery can't be made. Government orders for hardwoods and veneers have been coming freely, and such orders are being generally accepted, but very few orders are being taken for commercial use. Ash, hickory and oak are in excellent demand, while mahogany and walnut are in big demand for government orders. Poplar is especially good in boxboards for wagon and truck work, and gum and cottonwood are holding their own. Prices are being maintained without difficulty, and little underselling is going on. Collections are slow, many concerns having large amounts of money tied up in stock which can't be realized upon until shipping is resumed.

MILWAUKEE

The demand for hardwood and other lumber is being maintained at such a high level that at this time practically every sawmill in northern Wisconsin is in full operation and intends to keep on a maximum capacity schedule until late next fall. Not in years have so many mills been in operation during the latter part of January as this year. Government and other requirements are so broad and so urgent that a vastly greater capacity than is available could find full occupation for a long time ahead.

Northern timber and lumber operators have recently encountered conditions which could hardly be less favorable upon the output of logs and manufactured lumber. Three heavy snowstorms in two weeks' time not only badly hampered logging operations, but demoralized railroad traffic to such a point that log trains in some places were immovable in drifts for several days at a time. The blizzards added to the already bad traffic conditions with respect to the movement of cars out of mills. It required days to move loaded cars and more days for new cars to arrive for loading.

The effect of the Fuel Administration order upon sawmill and wood-working industries in Wisconsin was probably less severe than upon many other lines of production. Exemptions were liberally granted when it was shown that many woodworking plants provide up to two-thirds of their own fuel supply from waste material, while many saw and planing mills operate with electric power furnished from hydro-electric plants. However, there was some interruption until the confusion resulting from the order was abated.

NORTHERN MANUFACTURERS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
 VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany & Qtd.-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

ATTENTION

"CHIEF BRAND" Maple and Birch Flooring

2,000,000 feet in all standard widths, grades and thicknesses, carried on hand at all times to supply your needs promptly.

The Story of the Third Appalachian Logging Congress

Appears in LOGGING for
JANUARY 1918

instead of in December as previously
announced.

The change is due to the postpone-
ment of the meeting making it
impossible to hold the press long
enough to get the story in the Decem-
ber number.

LOGGING dons a new dress with this Jan-
uary 1918 number, climbing right into a class
with the most modern monthlies of general
appeal. Send for a sample copy FREE.

DULUTH, MINN., U. S. A.

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

Savings effected through such facilities as these go into better quality and consistently good service.

CENTRALIZE YOUR PURCHASES

The principles of factory economics demand the minimum of waste effort. Obviously effort can be saved by placing your orders as nearly as possible in one direction. Of course we can't supply the entire hardwood market, but with

Our own timber
Our own log transportation
Five big band mills
Half a dozen veneer machines
Big panel factory
Carefully trained labor that we have
been able to keep

We **are** able to concentrate your shipments largely from one point.

We Cut 70,000,000 Ft. of Hardwoods a Year

A company handling your whole list or a large part of it can operate more economically and smoothly with minimum prices and maximum service for you. This economic truism holds in your business—why not in ours?

Try it out on your present needs, which we can supply in

All Southern Hardwoods
Rotary Gum Core Stock, Drawer Bottoms,
Built-up Panels, Cross Banding

Anderson Tully Company

Memphis, Tennessee

We aim to so care for our lumber after cutting that loss is minimized. You benefit as well as we.

HELP

If you own any Walnut timber or know of anyone who has some suitable for making gun stocks to supply the boys who are going to Europe to fight for

UNCLE SAM

you will render a valuable service to the Government and your fellow Americans by telling us where the timber is located and how to reach the owner.

Walnut gun stocks are urgently needed to complete the necessary rifles for our army. The metal parts are being made on schedule but there is a serious shortage of stocks because the owners of Walnut timber are not offering it for their Country's use.

Our boys must have guns before they can go over and fight.

Tell us of any Walnut timber you know of and we will do the rest.

Let's all work together for the accomplishment of our one great purpose.

THE GOLDEN RULE

Michigan Hardwoods

Cadillac Quality

Nature has been generous in supplying Cadillac an abundant supply of superior timber and we are supplementing her work with the best methods of manufacture.

This has made Cadillac Quality famous.

Good timber, lumber well manufactured and seasoned, grades that are reliable and not blended to meet price competition, punctual service; — these are the elements of Cadillac Quality.

We sell direct to responsible dealers and manufacturers.

DIMENSION STOCK Mahogany and Walnut

Aside from our production of lumber and veneers—We are manufacturing kiln-dried mahogany and walnut dimension stock at the rate of 2,000,000 feet annually, and this department has been steadily growing since 1902. We think that these simple facts make detailed argument unnecessary—as to our prices, quality of our stock, and promptness of service.

However, we have ready for mailing a circular which explains in detail how and why you can save time money and trouble—through our dimension stock

But if you don't care for the circular, and if you realize what an expensive luxury your waste pile is, send us your cutting bills, as you would give them to your stock-cutters. We will quote a specific price for each style you manufacture.

C. C. Mengel & Brother Co.

The hardness of oaks vary as much as 50 per cent when they are compared among themselves, and there is no less difference among different species when their strength is under consideration.

TRY KNOXVILLE TENNESSEE

You can logically do so because you must ultimately depend more and more on this region for your hardwoods.

No higher type of timber can grow than that abounding in eastern Tennessee. It is found on a soil and in an environment which put quality in the trees generations ago. It is our task merely to see that this quality is utilized to the utmost in making the boards you buy. The best of equipment and highly trained organizations working in one place for years at a stretch make that task easy.

Then too you can be sure of getting the best possible service—always.

Ask about it from any of the following:

The Vestal Lumber & Mfg. Co., Knoxville, Tenn., & Fonde, Ky.

The J. M. Logan Lumber Company, Knoxville, Tenn.

The Little River Lumber Company, Townsend, Tenn.

The Babcock Lumber & Land Company, Marysville, Tenn.

(Main Office: Pittsburgh, Pa.)

OAK, POPLAR, MAPLE

Walnut, Chestnut, Hickory, Cedar, Ash, Basswood, Beech

MEMPHIS TENNESSEE

THE WONDER CITY OF HARDWOOD PRODUCTION

Fine Furniture Woods from Memphis

The Memphis district furnishes a considerable number of woods for furniture, but only three or four are of real importance. However, these few fill a prominent place in the Country's furniture industry. The oaks perhaps hold first place. Oak lumber comes from half a dozen species, some being white oaks, others red oaks. The common white oaks, which reaches its best development further north and east, extends its range over much of the Memphis district. Much of this oak is cut, holds its own wherever it goes. The forked-leaf white oak, often known as overcup oak, is more abundant and is marketed in large amounts and has an excellent reputation among furniture makers wherever it is known. Other white oaks of more or less importance in the region are post, bur, and cow oaks.

Three or four red oaks hold prominent places in trade, but the most abundant is the southern or Texan red oak, known frequently as spotted oak, because the bark is spotted. Other red oaks are known as water oak and willow oak.

Red gum clearly holds second place after oak as furniture wood in the Memphis region. Its rise in favor has been rapid and dates from the time when successful methods of seasoning it were worked out. Statistics of its use in furniture factories a few years ago would fall short of its present use. This wood when sent to Europe is known as satin walnut and hazel pine, the latter being the sapwood, the former the heartwood. It is the most popular and successful substitute for Circassian walnut which has become so scarce that it has nearly gone out of use and gum has taken its place.

Tupelo or cotton gum, often called bay poplar or simply bay, closely resembles yellow poplar and is frequently substituted for it.

Furniture factories that use ash and cottonwood procure much of their supply in the Memphis district.

Fine black walnut comes from that region, largely from the district west of the Mississippi, in Missouri, Arkansas, and Oklahoma; but much fine walnut is procured in Tennessee and Kentucky.

SUITE 1114-19 R. A. LONG BUILDING

KANSAS CITY, MO., January 1, 1918.

TO SUBSCRIBERS LUMBERMEN'S UNDERWRITING ALLIANCE:

THIRTEENTH ANNUAL REPORT

It is with no little satisfaction that we place before you our excellent Financial Statement and Annual Report for the year just closed.

In the face of the enormous increase of hazards due to WAR conditions our average saving for the year has been **31.78%** of the earned premium.

Notwithstanding the fact that within the year 1917 we have disbursed to subscribers **\$142,183.45** as Savings Dividends, our Surplus and Re-insurance Reserve shows an increase of **\$199,620.90** at this date.

The ALLIANCE now carries insurance on Six Hundred and Twenty-four properties, amounting to **\$49,292,357.17**, being an increase of insurance in force for the twelve months of **\$9,013,435.53**, and a net increase of Sixty-seven subscribers.

OUR READY RESOURCES.

Cash in Banks.....	\$ 704,407.18
High Grade Bonds and Accrued Interest.....	381,101.59
Accounts Receivable, Premium Deposits in Course of Collection, etc.....	137,769.20
Total	\$1,223,277.97
Less Losses in Process of Adjustment.....	\$56,452.44
Due U. S. Epperson Underwriting Co., Attorney	\$26,483.41
	82,935.85

SURPLUS and RE-INSURANCE RESERVE..... \$1,140,342.12

This item consists of amounts to the credit of subscribers' accounts which remain after having disbursed to them in the thirteen years' existence of the ALLIANCE—

SAVINGS DIVIDENDS returned..... \$ 967,969.75

FIRE LOSSES paid..... \$3,382,784.44

The extraordinary menaces threatening the properties in 1917 will be just as acute in 1918—or until the end of the WAR. Now that the Government has taken over the railroads and has already taken off many passenger trains in order that the crews may be put into freight service, the inspection work will be rendered much more difficult than heretofore, but we shall do our best to make our service as regular and prompt as possible.

The issuance of our **FIRE BULLETINS** will be continued. We have known from the first that many of our subscribers considered them very helpful in securing the kind of care and vigilance which makes for a lower fire ratio and therefore for lower cost insurance. The hundreds of commendatory letters received last year, however, leave no possibility of doubt as to the increased value placed upon this service by plant owners and managers generally during the present emergency. Permit us to urge that these publications be made to do the greatest good to the largest number through the distribution at all plants of each issue to those responsible for the safeguarding of the various departments. The co-operation of our subscribers during the year 1917, which permitted us to make this excellent showing, must not be abated if the same good results are to be attained in 1918.

Very truly,

U. S. Epperson,

President.

U. S. EPPERSON UNDERWRITING COMPANY,

Attorney and Manager,

A PATRIOTIC DUTY

Let us now put National Necessities above individual interests as far as practicable and do our utmost to help win the War by keeping up maximum production, conserving raw materials and investing some surplus cash in Government securities. The Lumber Industry has made a very satisfactory showing so far, both as to furnishing immense quantities of construction material and also recruiting a large body of skilled men comprising the Forestry Regiments of our expeditionary forces to France. May this good work continue until American principles and the cause of Democracy have been fully vindicated and a permanent peace established among the Nations.

ordinary accumulation of snow now on the ground increases the probability that the spring floods will be destructive.

It is beyond the power of man to prevent floods under existing circumstances, but persons whose business interests are threatened can take advantage of the brief period to prepare. Proper preparation made in advance may prevent great loss. It is hardly necessary to sound the warning, for the danger is fully apparent to all interested parties and they have time to take necessary measures to protect their property, though the time may be short. February often brings warm rains and general thaws, and March most certainly will bring them.

More Fact Than Facetious

LUMBERMEN CAN MEASURE IN TERMS OF DOLLARS the truth in a recent editorial in the *American Builder*, the purport of which is that if lumber quantities were spoken of in larger units than the board foot, the public at large would not be deceived by scarehead reports of government needs for wood and wood products. The editorial comments on the way the newspapers thrilled and scared the public with figures on Uncle Sam's lumber requirements for shipbuilding.

"Six hundred million feet," it was scareheaded, would be needed! And the newspaper paragrapher drew conclusions immediately that hardly a stick would be left over for home building, barn building, etc. "Six hundred million feet! Gee whiz! That's certainly a lot of lumber!"

"Well, so it is, but how much of our total lumber production is it? Exactly one-and-one-half per cent."

The editor of *American Builder* draws the conclusion that the construction of necessary buildings is being prevented right now because the public has been fed up on big figures which they do not understand, and that prospective builders are being scared away from building by extravagant statements of Uncle Sam's drain upon our lumber resources.

The editorial suggests that lumbermen and builders should get together and devise a new unit of measure for bulk transactions and rather facetiously suggests taking as the unit of lumber the amount used in an average sized house. Thus government figures of shipbuilding would read: 24,000 "houses" of lumber were required for this purpose.

The point he makes though is a very pertinent one, and brings us back to the often discussed condition surrounding the relation between lumber and the lay mind. People do not know lumber and never will until the lumbermen tell them something about it. Lumbermen are suffering every day from just such causes as this. Lumbermen will continue to suffer until they have gotten over to the public sympathy winning propaganda of a sincere and honest nature not merely for the purpose of counteracting adverse influence of substitutes, but rather that the public may understand lumber and thus of its own accord have more sympathy for it and use more of it.

Blow Aimed at Military Prussia

IT IS NOT THE CUSTOM of the Chamber of Commerce of the United States to take hasty and spasmodic action, for that organization contains five hundred thousand of the prominent business men of this country. It acts slowly and with deliberation, and when it acts, the action is backed by tremendous force. For that reason, the referendum vote commenced on January 14 is significant. On that day the chamber began taking the vote of its members on a matter that bodes no good to the military caste in Germany. If the vote is in the affirmative, it will serve notice on the business men of Germany that they cannot establish after-war trade relations with the business interests in the United States represented by members of the National Chamber of Commerce, unless Germany shall establish a government responsible to the German people. That means, of course, that so long as the present military caste in Germany, or any similar caste, is in power, trade with America will be practically impossible.

This action has not been taken in a spirit of retaliation or revenge. It is not for the purpose of punishing Germany for its past sins, but the object is to prevent future sins of the same sort. It aims to over-

throw the military rule that for forty years has gripped Germany, and to establish in its place a government responsible to the German people. It is expected to help do this by notifying the business men of Germany that if they want to do business with us, they must put in power a government that is not military.

The reason assigned for this action is that Germany's foreign trade enabled it to prepare for the present war, and that the military government used the foreign trade for that purpose. Now, if the same military power remains in control after the present war, it would begin to make preparations for another war and would draw stores and materials from us for that purpose. Therefore, it is proposed that Germany shall provide a government that can be trusted, or do without American products.

It is believed that a measure like this, openly and honestly announced in advance, will have its effect in Germany. If the business men there know that the professional soldier must no longer run their government, or else trade with us is at an end, it will have its influence in helping the Germans to rid themselves of their military caste and to substitute a government representing the people. To that extent it will help the Germans help themselves, and ultimately they will be thankful for it, though at first, no doubt, the action of the National Chamber will be roundly denounced by the kaiser's government as an interference with the internal affairs of Germany.

The circulation of the National Chamber's decision in Germany, if the vote shall be affirmative, as it doubtless will be, will have difficulties to overcome. Of course, the German censors would not let the news pass; but it would gradually filter in from neutral countries and it would not take long for every business man in Germany to hear of it. Possibly it was in anticipation of this action by the National Chamber of Commerce that President Wilson said in his statement of our war aims that it might become necessary, in certain contingencies, to restrict Germany's trade with the United States after the war.

Collecting Excess Profits Taxes

IN VIEW OF THE FACT that the collection of excess profits taxes in lump sums would often work a serious hardship upon the industries affected, considerable support has developed for the movement to have the government collect these taxes in instalments.

The profits shown on the books of a normal, growing company, especially in the hardwood business, are seldom "cash money"; in most instances they are due to appreciation in value of lumber stocks; to the inventory values of timber, mills and other materials and accessories; and to accounts on the books—all good and collectible, but not actually banked money.

The concern which has had a good year, even a highly profitable year, cannot immediately convert its numerous assets into cash. Lumber is not always a liquid asset, even when the demand for it is good, and sales are made readily at satisfactory prices, because the railway's delays and the condition of the buyer must be taken into account in converting the material into cash.

To demand of a lumber company which is financing the operation of numerous mills and the purchase of large lots of lumber—much of which, possibly, is to be used in war work of special value to the government—that it pay its excess profits taxes immediately, is to say that it must handicap itself severely in the conduct of its business. It may even have to borrow the money to pay the taxes on its book profits—profits which are certainly there, but not in a form which makes the payment of taxes convenient.

Inasmuch as the average lumberman must make full use of his line of credit for the financing of his regular operations, paying taxes with borrowed money is a method which does not commend itself from all angles. It is possible that the necessities of the government do not require the immediate collection of profits taxes, and if this is the case, it is to be hoped, for the benefit of business in general and the hardwood trade in particular, that the divided payment plan may be given official approval.

Chicago Lumbermen's Annual Meeting

The forty-ninth annual meeting of the Lumbermen's Association of Chicago was held January 21 at Hotel Sherman, Chicago. The meeting was in the Gray room, and was called to order at four o'clock in the afternoon. The attendance was large.

This association has the distinction of being the oldest of the lumber associations of the United States, and lacks only one year of rounding out the half century mark. In the absence of the president, Edward L. Thornton, the meeting was called to order by the vice president, F. B. McMullen of the McMullen-Powell Lumber Company.

The address prepared by the president was read by Secretary Hooper. It contained instructive statistics covering lumber matters in Chicago during the past year. The total receipts of lumber in Chicago in 1917 were 3,354,117,000 feet; of shingle 611,721,000 by

was slack early in the year, and the bureau shows a shortage of \$255.86. The hope was expressed that the bureau would be self-supporting in the future, and that the members of the association should make full use of the bureau's facilities.

The report of the arbitration committee was presented by G. A. Van Ness in the absence of the chairman of the committee, George P. Rinn.

During the year seven cases were decided by the committee without expense to any of the parties, and to their satisfaction, with one exception, which came before the special arbitration committee and after a decision had been rendered this was referred to the committee on appeals by the contestants, and after its decision by that committee, was sent back to the committee on arbitration. Four more cases are waiting to be heard.

F. B. McMULLEN, VICE-PRESIDENT.

E. E. HOOPER, SECRETARY.

C. H. WORCESTER, DIRECTOR.

rail and water. The lumber receipts by water totaled 86,707,000. There was substantial increase in the receipts of both lumber and shingles in 1917 compared with the preceding year. The city consumption of lumber last year was 1,806,106,717. The association was gratified to learn that Chicago's lumber business in 1917 broke all records.

There was a slight falling off in total membership. The year commenced with 330, added 26, and lost 43. Those lost by death were John D. Ross of the Brooks & Ross Lumber Company, March 3; George D. Burgess of Russe & Burgess, April 30; Arthur Nollau of Nollau & Wolff Manufacturing Company, December 30.

George D. Griffith, treasurer of the association, filed a report of finances for the year:

Balance Jan. 1, 1917.....	\$ 262.63
Receipts during the year.....	29,879.17
Total	\$30,141.80
Disbursements	30,113.08
Balance	\$ 28.72

Committee Reports

The standing committees presented their reports showing the status of business in the several fields.

George J. Pope is chairman of the inspection committee, but he was unavoidably absent and Secretary Hooper read the report, showing that 280 claims had been adjusted for the members of the association at an average cost of \$6.50 per claim. Inspection work

The membership committee's report was read by the chairman, Wilson Martin, and showed a gain of 26 and a loss of 43, meaning a net loss of 17.

Percival S. Fletcher, chairman of the traffic committee, reviewed the work for the year. The many changes in rates and other traffic matters made this committee's work of much importance.

The entertainment committee's chairman, J. L. Lane, made an entertaining report of the good things done for the enjoyment of the members of the association.

The Division Reports

Reports from the different divisions were next in order. L. W. Crow of the Mears-Slayton Lumber Company, chairman of Division A, reached the meeting barely in time to make his report. He had just arrived from Washington, D. C., on a train that was eight hours late. He told of affairs in the nation's capital, particularly in regard to the interests of lumbermen.

There was no report by Division B of the hardwood yards, the chairman, Edward C. Schoen, being unavoidably absent.

A. C. Quixley, chairman of the hardwood wholesalers, spoke for Division C and reported that twenty-one meetings had been held and much work done.

The pine wholesalers were represented by Division D, of which Charles B. Flinn is chairman. This division's business was in a satisfactory condition.

Seth E. Barwick, chairman of Division E represented the manu-

Review and Outlook

General Market Conditions

WITHIN THE PAST THIRTY DAYS there have been conventions of hardwood men which altogether have involved practically the entire hardwood manufacturing trade. In no case has there been the slightest pessimism or the slightest uncertainty of future strength expressed.

Conventions in the North have taken in all northern hardwood producing territories. Conventions in the South have taken in men from the extreme southwest and from the extreme southeast in the hardwood belt.

Opinions expressed at these meetings were neither boastful nor ambiguous. Formally prepared reports on conditions as well as privately expressed analyses of the present and prospects for hardwoods were firm and conservative and prognostications were based on definite things and definite facts.

Some hardwoods will not in themselves have sufficient strength to climb to abnormal heights, but the list as a whole is in so great demand and the supply, not only for the present but as promised for the future, is so restricted that the few weak sisters will be easily buoyed up by the strength of the remainder of the list.

Lumber is climbing steadily and surely upwards and it is doubtful if anything within the realm of possibility could happen to seriously affect the industry.

Cutting Out the Deadwood

CONCERNING THE SIXTEENTH ANNUAL of the Hardwood Manufacturers' Association last week, the most frequent comment about the convention quarters had to do with the absence of deadwood among the delegates. Deadwood has been a hindrance to conventions of business men ever since the idea of getting together first supplanted the idea of staying as far apart as possible. Deadwood doesn't mean merely the human element involved. The convention at Cincinnati was especially notable for the elimination of deadwood on its program in addition to the deadwood which commonly helps to fill up the convention floor.

The feature is encouraging and noteworthy not because of time and space saved but because of the possibility promised. People who went to Cincinnati were there for purposes of earnest deliberation and patriotic action. The spirit of energy, resourcefulness and confidence displayed is the spirit which gets things done and gets them done right. The strength of confidence in the Manufacturers' Association is shown in the numerical attendance, which was more than gratifying; in fact, was even surprising in view of the wholesale delays and absences caused by abominable train service.

Regarding the biggest thing now before the Manufacturers' Asso-

ciation, namely, the open-price plan, the best way of briefly stating its success is to cite the progress it has made not only in finding new advocates who are willing to sign up, but in covering a gradually broadening list of woods. The plan, it is true, has met with criticism and probably will never find complete sympathy in all quarters. It may even merit some little revision, but it is safe to say that when this revision becomes apparently necessary, it will be made.

The plan is so radically different from usual methods that it must necessarily meet with opposition, and it is rather a question of time when everyone will realize that even though he may be sacrificing a little himself in joining the plan, he is benefiting from what the other man is sacrificing and from generally raised standards of morale in the trade sufficient to more than overbalance what he gives up on his own account.

The Saving Grace

VERY RECENTLY A UNITED STATES SENATOR, who is not a socialist, declared that socialism is here now; and a wealthy and powerful steel manufacturer declared that political changes were at hand in this country by which wealth would lose its power and the professional politician would lose his hold. These prophecies show the trend of thought among some people who are in positions to secure extensive views.

If by socialism and political changes they mean anything remotely approaching what has taken place in Russia and what seems to be threatening Germany and Austria, the prediction should be revised. It is unthinkable that any such catastrophe as has overtaken Russia can threaten the United States. In four years that country has passed from absolute monarchy to absolute anarchy, and it has no farther to fall unless it degenerates to the condition of cave men and head hunters. Old world political storms may menace this country, but the saving grace with us is that the people are educated. We have been accused of unreadiness, and in some respects the accusation is well founded, but in the matter of political danger from sudden and boisterous agitation, we are prepared and are in no danger of disaster.

Our people, rich and poor alike, are educated and are supplied with common sense, and no braying fanatics, like those with which Europe is cursed, can ever get much of a hearing in this country. Their doctrine of violence and insanity cannot make any impression on enlightened people. In all factions, cliques, cabals, and aggregations, the most ignorant are the most violent. After the war of arms, and accompanying that struggle, will come a war of politics of the most dangerous and detestable kind, such as is now sweeping Russia; but Americans have reason to be thankful that this storm has not caught us unprepared. Our preparation was

commenced a hundred years ago when every community began building school houses and the cities founded universities, and now when disastrous political upheavals appear to threaten some of the great nations, we have no more to fear than the vaccinated man has cause to fear in the midst of a smallpox epidemic. The poison of anarchy which is so fatal where the masses are in dense ignorance, loses its malignant power when it comes in contact with intelligence. Such changes as will come to the political system of the United States will be peaceful, orderly, and beneficial; neither too sudden nor too long delayed. What the people of this country want and need they can get without clamor, tumult, or upheavals. The rule of reason, knowledge, and common sense will continue here, because an ample foundation has been laid, and the superstructure can be remodeled from time to time as needed. "The common sense of most will hold a fitful realm in awe."

Business Has Right of Way

BOYS' SLEDS AND ICE SKATES have not sold well this winter, according to accounts, though the season has been such as to encourage their use; but automobiles and accessories, particularly those belonging in the business class of machines, have sold right along, though the weather has not been such as to encourage their use. The contrast between sales of children's toys and of men's business apparatus does not prove that children do not want playthings, but it does mean that men must carry on business and that business must come before pleasure.

The point is important because it indicates a tendency. The stress of war has caused a falling off in the purchase of luxuries and nonessentials, and this tendency seems to be quite general, and it will probably continue until the war ends and business has returned to its old channels, years hence, perhaps.

This tendency is full of promise to the lumberman. Lumber and the manufactures of lumber are necessities, and those who need them will buy them. They may postpone for a time, but all the time the needs will accumulate and must finally be supplied. Under the stress of circumstances, the individual may get along without jewelry, silks, fine paintings, costly rugs, de luxe books, and a lot of things of that class; but the farmers must build fences, silos, and barns; the factory must have floors; the railroad must renew its crossties and trestles; the store must extend its tables and shelving; the manufacturer cannot get along without boxes and crates, and so on along the whole line—the man who needs wood needs it for business purposes and he will buy it. This is the encouraging feature of the situation and places the lumberman in a favorable position in the business world.

The Cut-over Land Problem

EVERY TIMBERED REGION where lumber operations are carried on has a cut-over land problem, or ought to have. The problems are not the same in all places. Where the soil is sufficiently fertile for agriculture and is not too rough, the problem consists in clearing the land and making farms of it as soon as possible after the timber has been removed. That is the problem with much of the timber lands of the southern states and of the northern Pacific coast. Where the land is good, no one thinks of bringing on another stand of timber after the first has been removed.

Where the land is too rough for farming or too poor for profitable agriculture, the problem is, or ought to be, the growth of another forest. That is the status now in New England and in much of the Southern Appalachian region. The deciding factor is the return from a future crop or crops. If farming promises larger profits than can be expected from another crop of timber, the land should be cleared and devoted to agriculture, otherwise, it should grow timber again. Formerly the lumberman seldom bothered with the land. He took the timber and abandoned the tract. If it was fertile, it usually passed into the possession of farmers who cleared it. Many of the early farms were cleared in that way.

The custom of abandoning cut-over land is about out of date. The owner does not wish to do it. He regards it as an asset that

should be made the most of, particularly if it is suitable for agriculture. Not quite so much interest is shown in cut-over land that is suitable for timber growing only. That is because it is not so valuable, or so saleable. It promises no profit during a pretty long period. The movements, societies, and associations that concern themselves with cut-over land are practically all interested in land suitable for farms. If cut-over land that is fit only for forest is looked after at all, it is usually done by large companies that can afford to wait, or by municipalities, states, or the nation that can wait still longer.

Thus it is that a person so often hears of associations or companies that are organized to handle cut-over land good for farms, and seldom hears a voice raised in behalf of that other class of cut-over land which is suitable for growing timber only. It is a one-sided affair, yet it should not be so. It is as necessary that the people of the future shall have timber as that they shall have farm crops. Both should be provided for, and no one should imagine that the cut-over land problem has been solved when the fertile areas only have been looked after. The rocky, sandy, swampy, or steep land that will produce trees must be considered as a factor in the problem, and no proper solution can be reached unless it is considered.

The Outcome Is Certain

NO ONE CAN CONVINCINGLY ARGUE that the hardwood industry has not been held back to a deplorable extent by lack of unity in its ranks. Singleness of purpose with resulting benefits to everybody concerned has been rendered impossible not because there existed differing opinions on matters of basic principle but because of factional dickering which kept association politics in the foreground and industrial advancement in secondary position. Barriers were artificially created and maintained and, interposed between the factional divisions, they served to effectually prevent the working out of any plan for unification of effort which would of necessity result in maximum progress.

The trade as a whole has been for some time awake to the necessity for a change but has not been able to clearly see the road to achievement. It has made a number of unsuccessful attempts to bring itself out of the bonds of politics but has always made the mistake of being so engrossed with the task of climbing over the wall at the highest point that it hasn't seen the gate swinging wide open at the end.

Seemingly having come to a rather sudden realization that it was impossible to scale the wall by mere brute strength methods, the trade has switched to the policy of the man who rather than have an argument with an express train steps quietly off the track and lets it pass, then resumes his way. The factional barrier is being neither scaled nor reduced by bombardment. The new scheme of things merely does not recognize its existence and the plan worked on is so simple and so sensible and so obviously for the good of the hardwood industry that it cannot fail in its purpose. The whole thing is merely a spontaneous and simultaneously expressed desire to see the hardwood industry unified in the time of greatest need. The desire is fathered by necessity and its most visible result so far, the new hardwood association, may in itself be merely a means to an end as may be the officially expressed desire for one association that was uttered at the Cincinnati convention. For no association will have further significance than as an instrument to carry on toward the desired goal—co-ordinated action. The industry will inevitably eliminate any influence which tends to hold back the movement toward modernization.

There are so many advantages attached to the practice of grading lumber at the mill before it is piled on the yard that there is not much excuse for doing it otherwise, even though it may be necessary to reinspect when loading out for shipment.

Some people may still claim that advertising is a waste of money, but even they will have to admit advertising campaigns have proven effective in putting a number of our native woods before the public in a light that means more business and better values.

The Memphis Car Outlook

Hardwood mills in Memphis, Mississippi, in Tennessee and in Louisiana were running on February 4, and propose to continue to run during the remaining heatless Mondays, on which most plants are forced to close down. There has been almost unending confusion over this question of hardwood mill operation on heatless Mondays, but the hardwood lumbermen are proceeding on the theory that they are rendering a service to the government by continuing to run, and that they are likewise greatly helping the fuel situation by the very large quantity of fuel they produce in addition to that of their own making which they consume. This appears to be the situation in a nutshell. There is much conflict of authority and much lack of definiteness regarding what can be legally done, but the lumbermen are apparently sure of their ground and they are acting as indicated.

Still, even with the mills running on Monday, there is much irregularity about hardwood manufacture throughout the southern hardwood field, because there is a very great scarcity of cars for handling logs to the mills and because there is a great shortage of log supplies at these plants, as a general rule. There is likewise a continuance of ice and snow and of very low temperatures, which handicap labor and cut down output materially. It is estimated by the Southern Hardwood Traffic Association that the railroads are not furnishing the mills more than 50 per cent of the cars they received in December when they did not receive more than 50 per cent of their requirements. This means that log supplies are being furnished to the mills dependent on the railroads at the rate of about 25 per cent of their requirements, a ratio which prevailed throughout January. Production is perhaps somewhat larger than this, but it is admittedly very small as compared with normal.

Just now the lumbermen are more concerned about probable flood conditions in the Mississippi and its tributaries than about any other factor. They believe that flood conditions will soon prevail and that they will be extremely serious. As a result the biggest effort put forth by the Southern Hardwood Traffic Association during the past few days has been to get cars delivered to its members for handling logs from territory where overflow would injure them or cause their loss. Many cars of logs have been removed recently from the territory tributary to Arkansas City, Ark., and from points on the Riverside division of the Yazoo & Mississippi Valley road. There are 1,500,000 feet of logs between the yards of the Illinois Central System at Nonconah, Miss., a few miles south of Memphis, and Lake View, Miss., on the Yazoo & Mississippi Valley road, which would be seriously damaged if not actually carried away by flood conditions. Pressure is being brought to bear for the moving of these and other endangered logs, while considerable lumber is also being removed to places of safety. The theory of high water is based on the abnormal quantity of ice and snow in the upper valleys of the Mississippi and its tributaries, some of which, notably the Tennessee river, are already at flood stage.

The Valley Log Loading Company reports that it loaded during January 860 cars of logs for mills on the Yazoo & Mississippi Valley line of the Illinois Central System and branch roads in the delta and on the Memphis-Marianna cut-off on the St. Louis, Iron Mountain & Southern, but the proportion on the latter was extremely small, only thirty-nine cars. These figures compare with about 1,400 cars during January last year. J. W. Dickson, president of the company, says that there are at least 25,000,000 feet of logs in the delta awaiting delivery to the mills, as against 5,000,000 at this time a year ago, and gives this disproportion between actual loading and the quantities to be loaded to show how little is being accomplished with the quantity of logs in sight. In this connection he points out that it will be possible to load almost unlimited quantities of logs if cars are available this year, whereas loading was very much restricted last year during February, March and April because of the very small quantity of logs awaiting loading.

There is apparent conflict between the figures of J. H. Townshend and those of Mr. Dickson, but this is reconcilable on the ground that the Yazoo & Mississippi Valley road is better supplied with cars than any other road in this part of the country. The other roads are handling logs on a limited scale, just as is the Memphis-Marianna cut off on the St. Louis, Iron Mountain & Southern, and it is for this reason that Mr. Townshend estimates that all the roads are, when taken together, not furnishing more than 25 per cent of the cars and logs necessary.

There is no shipping on the Mississippi. The ice in this stream is still very thick and all boats, barges and other crafts, instead of trying to handle freight, are seeking protection from ice gorges, which are headed down stream at this writing and which have wrought tremendous havoc among boats and other craft further north. Companies which have their own equipment for handling logs on the Mississippi and its tributaries are lying very close to shore because they believe that, by protecting this now, they may be able to use it later to good advantage. Receipts of logs by water at Memphis for the past six weeks have been almost nil.

There is little work being done in the woods and the reason is not far to seek. Ice, sleet, snow and rain have prevailed to an unusual degree, and labor has been difficult to control and able to accomplish little when kept in harness. At the same time it may be noted that inability to get cars for handling the present cut of logs, figures covering which have already been given, takes away the incentive for active logging. Last year the big problem was to get logs cut and prepared for delivery. Now the proposition is reversed and there are millions of feet which can not be moved because of lack of transportation facilities.

Mr. Townshend says he believes the car situation will shortly improve and that the mills will be getting considerably more logs than they are now receiving. He has faith in government operation of the roads provided the railroad men give Director-General McAdoo the support absolutely essential to success.

A New Dyewood from Jamaica

Borewood is the local and trade name given to a little-known wood recently shipped into the New York markets from Jamaica as a substitute for fustic, which it resembles in many respects. In Jamaica it is variously called sumach, hog doctor, poison wood and boar wood. The botanical name is *Metopium brownei* Urb., a tree very closely related to such well-known plants as the mango, bread fruit and the ubiquitous jobo of tropical America. Practically all the trees of this large group (Anacardiaceae) contain coloring principles of greater or less value. The jack fruit tree, which is the most common of the anacards, is used commercially in India as a source of dye, and we are, therefore, not surprised to see the closely related borewood come into the American markets as a dyewood.

The material is now being tested by a few dye experts, but the preliminary tests do not appear to show very encouraging results; however, further investigation may yield a dye of great merit. The color extracted by the ordinary method of boiling in water was used for staining silk a beautiful canary yellow. It will probably never be used as a substitute for fustic; moreover, the wood is not very plentiful, being confined almost exclusively to Jamaica. There is probably not enough of this wood to be had to make it an attractive proposition, either for the dealer here or for the consumer.

The borewood tree grows to the height of fifteen to forty feet and upwards to two feet through at the base. The trunks are usually short and straight and the crown rather open with dark green leaves. The tree is easily recognized in the forest after it has once been pointed out. It is confined to the southern limestone hills in Jamaica, where it yields a timber that is locally esteemed for a great variety of purposes. The sapwood, which is white and rather thin in mature trees.

Hardwood Manufacturers' Annual

Sounding the keynote that "the foundation of society is not competition, but co-operation," and with ringing declarations that lumbermen the country over would devote their every power and resource to our present and immediate task of winning the war, President B. B. Burns, of the Hardwood Manufacturers' Association of the United States, opened the annual convention at the Sinton hotel, Cincinnati, Tuesday, February 5. Patriotism and co-operation were predominant in all addresses. President Burns told the delegates that secrecy was no longer the thing in modern business. He pronounced the open competition plan a great success. One striking fact in the course of the morning session was the hint rather broadly given that a merger of various associations in the lumber business might be effected in the no dim future. "There are many signs that the consummation of a stronger organization of manufacturers, covering the entire hardwood producing area of the country is not far distant," said Mr. Burns. The address of the president, in full, follows:

President's Address

We come together at this, the sixteenth annual convention of the Hardwood Manufacturers' Association of the United States with a most gratifying record of achievement and an outlook for the future more promising than ever before. The details of the year's work will be laid before you by the secretary. You did not come here to listen to me, and I shall not endeavor to make a speech. It is sufficient to point out that there are many signs that the consummation of the wish of every lumberman for a strong organization of manufacturers covering the entire hardwood producing area of the country is not far distant. The rapid increase in strength of our organization and the recent organization of the American Hardwood Manufacturers' Association at Memphis are evidence that the lumbermen recognize more clearly than ever before the need of organized activity. I hope and believe that you will find the program which has been arranged for this convention both interesting and helpful, and suggest that strict adherence to the time set for opening the morning and afternoon sessions will add to the pleasure and profit of the occasion and afford more time for the social side of our convention, to which we have always attached a great deal of importance.

F. B. Gadd, assistant to the president, in his report on the open competition plan, declared that the innovation had met with such success that practically the only question remaining in regards to its application and feasibility was the broadening of its scope so that it will ultimately comprehend all hardwood manufacturers. Mr. Gadd declared that secrecy is yielding to publicity in business, and men now are dealing more fairly with each other and in an open manner. Competition, as would be sure to result under the plan, is fast undergoing a pronounced change. The result of that

competition has been open and above board instead of concealed; greater stability of prices at normal levels without attempting to control prices is obtained; an accurate knowledge of market prices so that each member may gauge the market intelligently instead of guessing at it is obtained and the advantage of knowing for the first time the exact conditions prevailing in the industry is attained. His address follows in part:

Mr. Gadd's Address

The most important achievement of the organization during the past year was the plan for "open competition" adopted in Cincinnati one year ago. This plan has worked out with such success that the committee feels the only question remaining is that of broadening its scope, so that it will ultimately comprehend all hardwood manufacturers.

Members of the Hardwood Manufacturers' Association had for a long time felt the need of a steadier and better market, and with the view of accomplishing it adopted this plan for open competition among its members.

It simply means that men are telling each other the truth about their business. Your experience has taught you that in commercial life most men are liars. You wouldn't trust your competitor around the corner much less tell him the truth about your business, but it has been done and by the members of this association. Times are changing and with the times, business methods. Secrecy is yielding to publicity, men are coming out into the open and dealing more fairly with one another.

It has resulted in making competition open and above board instead of concealed; friendly intercourse and confidence instead of jealous distrust and hatred; greater stability of prices at normal levels without attempting to control prices; an accurate knowledge of market conditions so that each member may gauge the market intelligently instead of guessing at it; the advantage of knowing for the first time the exact conditions prevailing in the industry.

Open competition means not only open prices but open discussion. The members get together every month at Cincinnati and Memphis. The acquaintanceship and get-together spirit engendered has resulted in quickening and vivifying the interest of all members.

I can hear some practical man say that the scheme is illegal; all wrong; get together and fix prices; they will all go to jail some day. I have yet to hear of a law that tries to prevent men telling what they have done. Open competition is not a cloak for price fixing.

On May 19 a committee representing this organization appeared by appointment before the Federal Trade Commission for the purpose of outlining to the commission the co-operative plan under which the association is working. The meeting was held at the suggestion of the association itself, because it was desirous of frankly submitting the open competition plan for the inspection and criticism of the commission.

THE MARKET LETTER

Another achievement during the past year is the market letter, which is published monthly and sent to every member of the association. It is also

E. O. ROBINSON, CINCINNATI, O., ELECTED PRESIDENT

sent to the lumber trade journals with a letter to it at length, and some publish it in full. This market letter is an analysis of current market and economic conditions, and it also contains the average market price of the important hardwoods. It is looked upon as a reliable source of market information and service.

HARDWOOD GRADES

Hardwood grades are the very heart and soul of the hardwood business. One of the chief purposes of this organization is the correct grading of lumber and the maintenance of a force of inspectors who are capable of interpreting the rules fairly, honestly and impartially. Look at the situation now as compared with what it was before this organization came into existence and reflect what it might be if it were not for the fight that our members have made for the establishment of grades they can afford to ship. The open competition plan has greatly increased the work of the inspection department during the past year and several additional inspectors have been employed. Our mill instruction service was inaugurated for the benefit of you and your customers and in the interest of uniform grades, which this association regards as a most vital principle of making and marketing lumber. When there is grade uniformity in the grades shipped by you and your neighbors one of your most difficult problems will be solved.

Our commercial reporting service, which is an exchange of ledger information between members, has shown a remarkable increase during the year. Our stock reports are of inestimable value in gauging market conditions, and it is our desire that every member of the association co-operate in preparing this very valuable statement.

COST AND PROFIT

It would be impossible to reckon in dollars and cents the value of the work done by this association. The expenses the past year were about \$50,000. The only source of revenue is from membership dues, and it is gratifying to report that at the end of the fiscal year December 31, 1917, the finances of the Association were in a healthy and sound condition.

In conclusion permit me to call your attention to the fact that the past year has been filled with more successful work than any previous year, the highest point thus far attained by the association in membership and activity, and in diversity and value of services has been reached.

A committee was appointed to confer with other affiliated associations of the National Lumber Manufacturers' Association in reference to the war profits tax. This committee held meetings at Chicago and Washington during the year.

During the year the association pledged all it had in material, in resources and in manhood to the government in the crisis confronting it.

It inaugurated a movement to get all lumber manufacturers' associations to make a board rule with a half foot mark on the standard rule and any other rule special. We believe the adoption of a rule of this kind used in measuring lumber will in a large measure eliminate the differences of one or two hundred feet in measurement which so often exists.

We have gone on record as favoring the branding of lumber, and have participated in the hearings on the fifteen per cent freight advance case. We are affiliated with the Chamber of Commerce of the United States and are co-operating in all activities of that association.

The value of this association's work is not measured by the number of new members secured, notwithstanding the increase in membership during the past year amounted to thirty-seven per cent, but by the constant con-

tact which the association has with its members. A large proportion of the many members who have joined the association during the past year were attracted by the service afforded through the plan for open competition.

Don't ask yourself the question: "What am I going to get out of my association membership this year?" Rather ask first this question: "What am I going to contribute to my association work this year?"

CO-OPERATION

Charles A. Hinsch of Cincinnati, president of the American Bankers' Association, followed the address of President Burns with

an interesting talk on "Co-Operation." Mr. Hinsch aroused his hearers to a high pitch of enthusiasm when touching upon the war situation, and gave the lumbermen some sound advice on business methods which should prevail during the war and after. He declared that the German Empire had mobilized and co-ordinated every last atom of her resources of brain and material for winning the war, and the Prussians had effected a centralized, comprehensive, powerful business organization which, considering its size and ramifications, has never before been approached. He urged the lumbermen and all other business men in the country to prepare for unprecedented competition for world business after the war. "Give America an even chance with the people of other nations," declared Mr. Hinsch, "and the people would furnish business to comfortably support a merchant marine second to none." Ignorant competition is most dangerous to the development and success of our country, Mr. Hinsch asserted, and he made a plea for the Federal Reserve bank and urged all eligible state banks to join the great system, declaring that it is inconceivable that the national bank alone should be expected or permitted to insure

the financial stability of the country unaided by the eligible state banks. Mr. Hinsch strongly advocated the use of trade acceptance in the lumber industry. He gave an instance of the campaign that is being waged for the general establishment of the credit instrument in American business and told of its adoption in many other lines where it is more than justifying its promises.

The speaker advocated the development and improvement of the interior waterways of the country as a means of improving transportation facilities, and he laid special stress upon the canalization of the Ohio river from Pittsburgh to Cairo by the construction of locks and dams. Surveys have shown that this can be done with the expenditure of \$30,000,000. The importance of the Ohio river as a means of transporting coal requires that it be given first consideration in any scheme for taking advantage of our wonderful river systems for transportation purposes.

E. B. BURNS, HUNTINGTON, W. VA., RETIRING PRESIDENT

Selling Problems

Mr. Hinsch's address was followed by an instructive talk by Mr. A. C. MacMahon of Chicago, sales manager for the National Cash Register Company, on "The Science of Selling and Solving Knotty Problems." His address was unusually well received, because it was unusually well given. His talk involved no dreamer's ideas of abstract psychology, but rather brought out one by one points which he explained so easily and simply that they appeared to be just what they really are—mere commonsense. He told of the methods the National Cash Register Company has pursued in perfecting the selling ability of the sales force which it maintains.

"Salesmanship, according to Mr. MacMahon, is based on a combination of health, knowledge of the article or proposition to be sold, enthusiasm, resourcefulness, honesty and hard work.

Mr. MacMahon emphasized the necessity of the salesman giving to his prospect a feeling of confidence in himself and in his proposition, but said that a salesman must first secure attention and then create the desire to buy. Illustrating these points he recited an

Cash in office 1.21

Total \$ 1,552.12

Appointment of Committees

The following committees were then appointed by the president, and the delegates adjourned for luncheon:

RESOLUTIONS—E. A. Lang, Chicago; A. P. Steele, Sardis, Miss.; R. L. Hutchinson, Huntington, W. Va.; C. L. Harrison, Cape Girardeau, Mo.; W. O. Cane, Bristol, Tenn.; Rex H. Browne, Big Creek, Tex.

COMMITTEE ON OFFICERS' REPORTS—A. O. Davis, chairman, Houston, Tex.; M. B. Cooper, Memphis, Tenn.; R. E. Lee Wilson, Wilson, Tex.

COMMITTEE ON NOMINATIONS—W. E. DeLaney, chairman; Leon Isaacson, Coal Grove, O., and J. H. Himmelberger, Cape Girardeau, Mo. Both the latter are ex-presidents of the association.

AFTERNOON SESSION

The afternoon session was opened by a discussion on the open competition plan. Mr. Stark is chairman of the committee on open competition and he gave a resume of the work as it progressed before handing in his formal report. He declared that to a large extent secrecy had been eliminated from the trade, and that the

J. W. MAYHEW, COLUMBUS, FIRST VICE-PRESIDENT

F. R. GADD, CINCINNATI, ASSISTANT TO THE PRESIDENT

M. W. STARK, ST. ALBANS, W. VA., OPEN PRICE CHAIRMAN

amusing case of the street corner barker who was selling a new brand of cough drops. He had his wares spread before him and standing on a soap box began his talk in a very hoarse voice. One of his listeners asked him rather pointedly why he didn't use some of the cough drops himself, and fix up his own vocal chords, to which question he replied it was a good idea and he had never thought of it. He immediately opened a box, swallowed a couple of the cough drops and to the amazement of the crowd his hoarseness disappeared almost at once and he had sold out his entire stock in five minutes.

In closing Mr. MacMahon gave particular emphasis to developing the selling end of the lumber business, warning his hearers against developing the manufacturing end against the selling end.

Finances

The annual report of Treasurer M. W. Stark showed the following satisfactory condition of the association's finances:

Cash in bank, Jan. 2, 1917.....	\$ 1,808.77
Cash in office Jan. 2, 1917.....	2.20
Cash receipts, year ended Dec. 31, 1917.....	\$62,516.11
	<hr/> 62,516.11
Total to be accounted for.....	\$64,327.08
Disbursements same period.....	\$62,774.96
	<hr/> 62,774.96
	<hr/> \$ 1,552.12
Balance in bank Dec. 31, 1917.....	\$ 1,550.91

organization had been brought closer together along with a better feeling, and that matters which formerly were not brought to the attention of the general public were now being made public. A summary of Mr. Stark's report follows:

Report by W. M. Stark

The production and stock report was temporarily discontinued, owing to the necessity of helping the government, but it has now been resumed.

The open competition plan has undergone some slight changes, in order to fit it more accurately into conditions. It was found advisable to discontinue Class A because of confusion as to the meaning of that class, and because there was fear that it gave just grounds for criticism.

Last May the open competition plan was formulated and filed with Federal Trade Commission in order that the body might be fully and officially informed concerning the matter. The commission has not as yet said anything about the report. Inasmuch as no objections have been announced, it is assumed that the commission found nothing for disapproval.

Two slight changes in the wording of the open competition plan were made during the year. The "index price" was changed to "average price."

The office contains complete records showing how the prices are obtained. The over and under prices were done away with. The commission entertained doubts as to the advisability of this practice, as it might serve purposes not contemplated, and it was thought best not to continue it. The Federal Trade Commission did not express displeasure with this feature.

Monthly meetings were held in Cincinnati and Memphis during the year, and it is not improbable that similar meetings will be held elsewhere. The discussions in those meetings were open and frank, and the statements were very close to the truth, and there was little disposition to deceive.

The reports pointed out that the most important part of the plan is that members report their own conditions. Among the leading topics discussed at these meetings were: stock, freight rates, and methods for helping the government, and similar topics.

The open competition plan is only a beginning and will be followed by others of equal importance. The spirit of the times is open, in the full light, square and fair transactions, and, under the plan of operation it cannot be harmful to the members.

The Plan Discussed

The submission of Mr. Stark's report of the plan led to an interesting discussion by a number of persons present at the meeting. The first speaker was A. O. Davis, Beaumont, Texas, manager of the hardwood department of the Sabine Trunk Company. He spoke of the large number of inquiries among Texas mills, and the quantity and kinds of stock on hand. He was convinced that the saw mills must find some other outlet for their Nos. 1 and 2 common oak.

A. Deutch, Oakdale, La., of the Sabine River Lumber & Logging Company joined in the discussion and described how greatly depleted some of the stocks were in his region. There is no dry stock thicker than 2½ inch. A large amount of oak is wanted for vehicles for the government, but prices have not been fixed. It is up to the manufacturers of vehicles to get the stock, but they have not yet offered a price that will bring it. Mr. Deutch had nothing but praise for the open competition plan.

P. A. Ryan of the P. A. Ryan Lumber Company, Lufkin, Tex., spoke along the same general line as to stocks and markets in his

half of what it was last year, in oak flooring markets as are most other hardwoods. Trading conditions would be better next year.

Co-Operation Within the Law

Judge L. C. Boyle of Kansas City, then mounted the speaker's stand and was warmly greeted. At previous conventions Judge Boyle delivered most impressive addresses and the hall was thronged by the time he began to talk. Judge Boyle is a speaker of great force and his words, soundly backed by logic carry conviction to all who hear him. He talked on "Co-operation Within the Law," a timely and exceedingly interesting subject to the lumbermen. New elements are coming on in the industrial world, declared the Judge, and he predicted many vital readjustments in the business world after the war and further predicted that it would behoove the country to find ways and means of meeting the socialistic propaganda. He stirred the patriotism of his hearers when in ringing tones he declared "your son and my son have gone over the water to fight. They are seeking no extension of territorial rights, but only to make this world ideal and safe after the war. Our boys now fighting are the finest body of soldiers that ever stood on the ground of France."

The speaker pointed out that while the nation as a whole has grown from rural conditions to industrial dimensions, sawmill men have remained essentially what they always were, pioneers and individualists. Only in recent years have they begun to form as-

BOARD OF GOVERNORS

part of the country. The supply of green oak, hickory, and ash is good and the market active, and the railroad demand is strong, but so much could not be said for the flooring, sash, door, and interior trim situation with logs still to be cut to meet present demand the present year will develop into a prosperous one for the lumbermen of his section.

Thomas Forman, Detroit, Mich., followed Mr. Ryan, and gave a hearty endorsement of the open competition plan, which he characterized as one of great promise, working to the interest of the purchasers as well as of the seller. He viewed the matter from the standpoint of the purchaser. It was his opinion that business in the manufacturing of oak flooring would not be very brisk until building conditions got around to normal. The call for oak flooring cannot be large until the class of buildings calling for that class of material come again to the front. He said that the oak flooring business has increased in recent years until it now exceeds maple flooring in quantity. During 1917 manufacturers produced 125,000,000 feet of oak flooring and 115,000,000 feet of maple flooring. The output in 1918 was likely to be little more than

sociations for united action. Speaking of the purposes of the National Lumber Manufacturers' Association, he said:

This organization grew up out of the conception in the mind of the manufacturer that there were certain problems that were inherently related to the manufacture and not to the wholesaling of hardwood products. I am not here to criticize nor in any wise to draw invidious comparisons, but I do say that the hardwood manufacturer of this country who does not realize that his problem is essentially a problem for him to debate and discuss with other manufacturers and not with the distributor of his product does not understand and has not grasped the proper concept of his economic and industrial life.

He dwelt at some length on the fruitless efforts by lumbermen to form combinations to better their conditions, until about 1914 when the Clayton bill and the Federal Trade Commission act were passed, and from that time a new understanding began to take form.

There was a change of methods along with a change of ideas. There were no selling secrets, but what was done was public, after it was done. When sales were made, the prices were announced. That was co-operation within the law, so long as attempts were not made to prearrange prices.

Cost Accounting

C. H. Seovell of Boston, certified public accountant, then delivered an address on "Accounting Essentials for Lumber Industry." Judging from the rapt attention given Mr. Seovell, the lumbermen gained much knowledge from the talk, which, while technical, was lucid and of great value. Mr. Seovell impressed upon his hearers that it is to the advantage of everyone in the lumber industry that standards of cost be established and the information widely distributed.

The difficulties of properly estimating the cost of stumpage in lumber operations was discussed. On this subject Mr. Seovell said:

The attention of a manufacturer is naturally fixed on the cost of stumpage as it is consumed in lumber operations. This cost may be a current purchase price, or it may be the final reckoning of a long holding of timber. If timber has been long held there is naturally a comparison of the cost to date with the actual or possible prices for current purchases. There is then the debate as to how the cost of carrying timber holding should be reckoned. The view point of the holder of timberland necessarily regards the sawmill chiefly as the best method of disposing of stumpage. Even this point of view cannot ignore the cost to carry timber holdings. I am surprised that most of the printed matter now available should be so vague and uncertain on these important matters. It seems to me the problem of raw material cost for lumber operations is different in degree only, and not different in principle from the problem of any other raw material that is bought long in advance of its expected use, and might perhaps be bought cheaper in a spot market, if indeed it is obtainable, when the day for consumption arrives.

The Smoker a Lively Affair

A smoker was held for the delegates in the evening in the banquet hall of the Sinton. The entertainment committee provided an appetizing luncheon and a very entertaining cabaret performance, the latter being in charge of Horace Williamson, Cincinnati, the "poet talker."

Assistant to the President F. R. Gadd deserves great credit for the general arrangements for the convention. The delegates were well taken care of every minute. The registration system enabled anyone to locate a friend quickly. This work was in charge of Mr. Gadd's office force. Each delegate was registered and properly tagged with badge and identification card as he made for the convention hall. The young ladies' winning smiles at the registration desk quickly banished the most grim frown of those who arrived late owing to delayed trains. Everyone left the registration desk in good humor. They couldn't help it.

The badges, about the neatest seen at a convention, were the compliments of The Henry Disston & Sons Company. The national colors formed the ribbon part.

SECOND DAY MARKED BY SPLENDID SPEECHES

The second and closing day of the convention opened with the speakers reaffirming their declarations sounded the opening day,

W. H. DAWKINS, ASHLAND, KY., MEMBER
BOARD OF GOVERNORS

W. E. DELANEY, LEXINGTON, MEMBER
BOARD OF GOVERNORS

R. M. CARRIER, SARDIS, MISS., MEMBER
BOARD OF GOVERNORS

The operating cost can be separated in them more readily than timber cost, and the items usually included are logging, transportation, sawmill operation, by-product manufacture, selling and shipping.

The overhead cost came in for discussion in its proper place. Aside from the distribution of operating expenses, particularly taxes and interest on the investment, among the many groups mentioned above, care should be taken to distribute to these groups additional costs for supervision, supplies and any expenses which can be accurately located. Such a proceeding will reduce the general expenses to a much smaller total than usually appears in the accounts of a lumber business.

A discussion of business conditions, led by M. W. Stark of St. Albans, W. Va., followed and much useful information was gathered. Lumbermen told of their trials and tribulations and the good side of the lumber business during the past year. At the close of the discussion, the convention adjourned until 11 a. m. Wednesday.

which pledged them to give their all to the country to win the war. Prominent features in the resolutions adopted by the convention were the urging of the creation of a board of war control and the appointment of a munitions director by Congress. Another important step taken was the resolution favoring the retention of rate-making power in Interstate Commerce Commission and publicity in business. After the reading of various reports of committees on officers' reports a most interesting address on "Trades Associations and the War" was delivered by Gilbert H. Montague of New York. A striking portion of this talk was Mr. Montague's hope that through the war this country would become educated to regulate and not destroy, and how to open the door to American enterprise here and abroad and under rules of public protection which can not be known in advance. "It is a hard matter to tell what the necessary action in reference to the railroads at this time will be," said Mr. Montague, "and I believe that our progress still will be slow after the war, but I look for a better adjustment of legislation to the facts of life."

Enthusiasm

William Ganson Rose of Cleveland, Ohio, delivered an address well earning the title of "Enthusiasm." Mr. Ganson's efforts were contagious, the audience quickly catching the spirit of his talk, and when with ringing tones he declared that "Enthusiasm is the keynote to success and enthusiasm is to plant the American flag in Berlin," he brought the audience into ecstasies.

"It was once said that the American spirit was lost in the rush for the dollar; that the American spirit was dead and that American unselfishness was smothered. Those statements, false in every respect, were answered by millions of our young men, by the outpouring of dollars by the people to the liberty loan of many millions, enrollment of patriots made up of the civilian Red Cross army and finally and forever by the onrush of our soldiers through the Hindenburg line, through Prussian militarism and then to the goal of peace." Mr. Rose's address will appear in full in a future issue of Hardwood Record.

Report of Transportation Committee

The report of the transportation committee was made by B. F. Dulweber, who stated that the committee had held no meeting during the year, because the members were so widely scattered. However, much active work was done.

Additional suspensions were secured in I. & S. Dockets 745 and 775 involving advances in hardwood lumber from eastern Arkansas

has a It is true that the government has had control of these properties only a little more than thirty days but seemingly so far, the possibilities of what should be accomplished have not been recognized by those in control, and there seems to be an entire lack of co-operation in handling the matter. The possible advantages to be gained from the operation of our railroads as a unit, instead of as individual properties, are so great and apparent that it hardly seems necessary to call them to your attention. The government, by taking over the railroads, has an opportunity to operate these properties as a unit, and give to the country the result and benefits from such operations, which are needed now as never before, but so far, little or no effort seems to have been made toward operating these properties as a unit. And we still have the extravagant, inefficient and wasteful individual operation to contend with, with the added burden of having no one to hold responsible."

The failure of the government operation of the railroads, so far as it has failed, was believed by the committee to be due primarily to the fact that the appointment of Mr. McAdoo to the position of railroad director was ill advised, because as secretary of the treasury he had his hands full, because the selection should have gone to a man of greater experience in railroading; because the appointment was of a political character; because in selecting him as

LEON ISAACSON, COAL GROVE, O., MEMBER BOARD OF GOVERNORS

RALPH MAY, MEMPHIS, MEMBER BOARD OF GOVERNORS

W. M. RITTER, COLUMBUS, O., DIRECTOR

and all territory east of the Mississippi and south of the Ohio to destinations in central territory.

During the year carriers filed tariffs increasing rates on lumber fifteen per cent. These rates are under suspension.

All industry has suffered from car shortage, and lumber has felt this particularly because a large proportion of the cars owned by southern roads are in possession of eastern roads.

A reduction of 20 cents per 100 pounds, on a 60,000 pound minimum to the Pacific Coast was secured. The carriers are now seeking authority to again increase this rate.

An effort by the Rock Island system to cancel through rates from Arkansas and Louisiana to Pensacola, was defeated, and lower rates to Pensacola and Mobile from points on the I. C. and Y. & M. V. were secured.

The government has taken control of the railroads, and the all-absorbing question is whether the method of operation will bring about the needed relief and the greater efficiency contemplated. It depends upon how the government manages these great properties.

"I must confess, that, so far I am sorely disappointed in what

sistants he has confined himself to too small a field; because all of the men he has selected have been previously opposed vigorously to government operation of railroads. Some of his appointments should have gone to men thoroughly versed in transportation problems from the standpoint of the shipper, and not entirely from the standpoint of the carrier. It is understood that it is the purpose of the administration to have invested in Mr. McAdoo full authority to make rates. This would be a serious mistake. The authority of the Director General should be limited to the actual operation, and the making of rates left to a judicial body of trained competent men.

It is impossible with his vast duties, for the Director General to give the question of rates such consideration as would lead to a fair and intelligent decision, even if he were qualified to pass upon these matters. It is but human that he should endeavor to make a good showing with the properties in his charge, and this might influence him toward advancing rates that were really unjustified. Further, he is surrounded and advised by men formerly in charge of these properties, who hope to again secure control of them after the war is over, and it is but natural that they should plead

for higher rates whether justified or not, because of the belief that these rates will continue in effect after the properties are returned to their charge, or at least influence the rates that will then be made.

Report of Executive Grading Commission

Your executive grading commission submits for your consideration its recommendations as follows:

It is recommended that in all woods where the grade of No. 1 Common specifies lengths 6 ft. and up the rules be amended to include 4 ft. and 5 ft. lengths, which lengths are to be graded the same as 6 ft.

It is recommended that the present grade of Wagon Box Boards in all woods be changed to read as follows:

WAGON BOX BOARDS.

COTTONWOOD and GUM

Widths: Wide, 13 to 17 inches. Narrow, 9 to 12 inches.

Lengths: 11 to 16 ft.

Thickness: Must be 1 inch thick when shipping dry.

Defects: Bright or sound discolored sap or a few scattered pin worm holes admitted.

11 ft. lengths will admit 3" splits in one end, or their equivalent in one or both ends.

12, 13, 15 and 16 ft. lengths will admit of a 12-inch split in one end, or its equivalent in one or both ends; 14 foot lengths will admit of splits not to exceed 6 inches in one end or its equivalent in both ends; otherwise, each piece in 11 to 13 foot lengths may contain defects that do not prevent the piece from cutting one side; or in each piece 14 to 16 feet long, one side and one end; sides to work 10 feet 6 inches long; ends to work 3 feet 6 inches long by the full width of the piece. Each side and end may contain one sound standard defect, or its equivalent, showing on one side.

NOTE: Five per cent in feet of a shipment that can be reduced in

small sound knots or equivalent defects that will not impair the use of the piece for the purpose intended."

The commission feels that it is necessary to change our present grade of sound square edge oak, but owing to lack of time we are unable to formulate a rule to present for your consideration at this time, and ask the authority of the convention for the grading commission to formulate and put into effect the necessary changes to our present rules.

GUM AND COTTONWOOD.

The Executive Grading Commission in connection with Red Gum will report that in its opinion some changes are necessary in the rules, but not having sufficient time to formulate and report these changes at this time, ask the authority to work out such changes as are necessary and put same in effect upon the approval of the Executive Grading Commission.

The Executive Grading Commission recommends that in view of the fact that in the grade of F. A. S. Cottonwood there is no provision for a grade of Firsts that a grade of Firsts shall be inserted in this rule to correspond with the same grade in Gum.

Other committee reports followed, the most important of which being that of the committee on resolutions, prepared by E. A. Lang, chairman; W. O. Crane, R. L. Hutchinson, Thomas Forman and R. L. McCracken. The resolutions follow:

Report of Resolution Committee

WHEREAS: Our country is now at war and it is the first and paramount duty of every patriotic American to devote every energy to the successful prosecution to a victorious conclusion of the aims of the allied armies; and

WHEREAS: Our industry plays a most vital and important part in this

J. H. HIMMELBERGER, CAPE GIRARDEAU, MO., MEMBER BOARD OF GOVERNORS

W. C. BONNER, HETH, ARK., DIRECTOR

P. E. GILBERT, CHICAGO, ILLINOIS VICE-PRESIDENT

measurement by cutting the end or edge or both to a size ordered must be accepted and measured as Boxboards, separate tally to be kept of such boards, showing reduction and measurement.

NOTE: Inspectors are cautioned that "wooly" Cottonwood and lumber so warped that it cannot be used for Boxboards, must be excluded from this grade.

(In the "GUM" Rule eliminate the words "Wooly Cottonwood" in the last paragraph.)

It is further recommended that on page 4, paragraph 5, the first sentence be changed to read as follows: "The delivered price (f. o. b. destination) includes only the usual freight charges to point of delivery mentioned, and are based upon the freight rates in effect at time of quotation, with no allowance for switching, terminal charges, state or federal taxes, or any other charges."

It is further recommended that in the grade of Select Quartered Oak the width be changed from 6 inches to 5 inches.

It is further recommended that in Common Quartered Sawed Oak, the minimum width be 3 inches instead of 4 inches, and the minimum width of the cutting be changed from 4 inches to 3 inches.

It is recommended that our present grade of Selects as in Oaks be applied to the woods of Ash and Red Gum.

We further recommend that the following be adopted as a standard grade:

"Oak Implement Stock
Widths 6" and Over
Lengths 8' and Over

Will admit only practically sound defects equal to those permitted in standard grade of F. A. S., well scattered pin and spot worm holes;

work, since upon it devolves the production of millions of feet of lumber required by the government for the purpose of national defense, now therefore, be it

RESOLVED: By the Hardwood Manufacturers' Association of the United States, in convention assembled, we do hereby pledge ourselves to do everything possible within the province of our industry in the nature of war service.

WHEREAS: In recognition of the ruinous competitive conditions existing within the hardwood lumber industry, this association at its last annual meeting adopted what is known as the open competition plan, whose purpose was to correct these conditions for the benefit of the industry and the public welfare. It was recognized that no plan could ultimately succeed which did not have at its base service to the public. Among the results which this association sought to achieve by this plan were the following:

1st—To develop association interest through the medium of price publicity

2nd—Through the inspection service phase of the plan to stimulate interest in, and development of, scientific methods of grading among the hardwood manufacturers, firmly recognizing the basic truth that the grading of hardwood lumber is essentially a manufacturer's problem.

3rd—Through the operation of the mill instruction phase of the inspection work to afford competent instruction for inspectors and accurate information for the benefit of the mill man, and his competitor also, as to the grade he is making.

4th—To stabilize market conditions, not through secret price fixing methods but through publicity, believing that publicity will ultimately result in bringing about uniformity of prices in harmony with the prevailing economic conditions.

5th. To eliminate undesirable business practices by bringing all our transactions out in the light of day when immoral and uneconomic practice cannot long survive.

6th. To bring about a more friendly feeling among competitors and to remove the mutual suspicion and distrust which has heretofore been a barrier to successful association.

7th. To accomplish all these results by publicity, openness and frankness, not by agreements of any kind and not by compulsion the fundamental basis being that correct information will furnish the light by which each of us will individually choose to follow.

WHEREAS, The operation of this plan for the past year has resulted in a realization of the essential soundness of our plan and has resulted in most encouraging progress in the achievement of the purposes set forth, therefore, be it

RESOLVED, That this association go on record as unqualifiedly endorsing the open competition plan and urging its extension and development as rapidly as possible.

WHEREAS, The director general of the railroads has expressed the opinion that by virtue of the action of Congress entrusting him with the operation of the railroads he is empowered to make the freight rate, and

WHEREAS, We consider it imperative that the rate-making power continue to be vested in such a judicial body as the Interstate Commerce Commission, and that such power not be lodged in the hands of the man or men entrusted with the actual operation of the railroad properties, and

WHEREAS, We consider it of prime importance that the rights of the shippers continue to be fully recognized and that they be afforded some means of presenting their side of the cases in the event of any proposed change in rates, such evidence as they may submit being judicially considered by some impartial and disinterested body, be it

RESOLVED, That this association go on record as offering the clothing of the director general of the railroads with the rate-making power, such a centralization of power, in our opinion, being inimical to the best interests of the shippers of hardwood lumber, as well as the shippers of all other commodities, and be it further

RESOLVED, That a copy of these resolutions be forwarded to Senator Smith, and Representative Sims, chairmen respectively of the Senate and House committees on Interstate Commerce.

Resolutions seeking better means of handling coal and of thanks to everyone helping to make the meeting a success were read:

Copy to be sent to President and the Honorable H. A. Garfield, Fuel Administrator.

RESOLVED: That the thanks of the association are hereby extended to the lumber trade journals, which have faithfully supported and given publicity to its work during the past year and at this annual meeting.

PREAMBLES AND RESOLUTIONS.

WHEREAS, The efficient conduct of the war in which this nation is now involved is a paramount purpose of the American people, rising above all other considerations, political, sectional, or personal; and

WHEREAS, Such efficient conduct is possible only through such organizations as will centralize control, prepare programmes, clearly define all duties, avoid all conflicts of jurisdiction as between departments and bureaus, such as the War Department, Navy Department, Marine Corps, Shipping Board, Fuel Administration and others; and ensure complete co-ordination; and

WHEREAS, The conduct of the war is apparently characterized by lack of co-ordination; by independent planning by unrelated and unco-ordinated authorities acting without agreement; by absence of power for quick decision and action in vital matters, which conditions tend to confusion, delay, waste and low efficiency; therefore be it

RESOLVED, That, in order to meet the imperative demand of the American people and of the government for the speediest possible preparation for and the most vigorous conduct of the war, for which Congress has conferred unparalleled power upon the President and has provided means almost without limit, the machinery of administration should be strengthened by the creation of

1. A Board of War Control, to be appointed by the President and approved by the Senate and subordinate only to the President. It should consist of men of pre-eminent ability unburdened by departmental routine and should have authority in respect of all matters relating to planning and preparation for, and direction of the war, over all other departments and officials of the government; such Board to supervise, direct, control and especially to co-ordinate the war preparations of every other department and branch, and to that end to be empowered to reorganize in its discretion any existing departmental organizations or methods.

2. A Director of Munitions who, subject to the Board of War Control, shall have sole control of providing all munitions and supplies required for the purposes of the war; and be it further

RESOLVED, That the Congress is earnestly requested immediately to pass the necessary legislation fully to carry out the purposes of the preceding resolution and to repeal any existing legislation conflicting therewith.

After the adjournment of the convention, the new board of governors met and discussed the budget for the year. It was said that last year was a successful one for the association and that the membership increased forty-three per cent. Another success was the open competition plan which first started in oak and since July branched out to ash, basswood, cottonwood, chestnut and poplar.

Mr. Gadd remains with the association in the same capacity.

A feature of the convention was the able manner in which headquarters of the association in the Sinton hotel were attended to. Chief Clerk Dollman was in charge of the office and was assisted by W. A. Gohn and A. B. Reistenberg. Mr. Dollman's system for getting out reports and speeches and attending to the many details of the big convention was most efficient.

Election of Officers

The election of officers, or rather formal ratification of the committee's recommendation, wound up the convention with the result as follows:

PRESIDENT—E. O. Robinson, The Mowbray & Robinson Company, Cincinnati.

FIRST VICE PRESIDENT—J. W. Maylew, W. M. Ritter Lumber Company, Columbus.

SECOND VICE PRESIDENT—R. L. Hutchinson, Hutchinson Lumber Company, Huntington, W. Va.

TREASURER—M. W. Stark, American Column & Lumber Company, St. Albans, W. Va.

ASSISTANT TO PRESIDENT—F. R. Gadd, Hardwood Manufacturers' Association, Cincinnati.

WEST VIRGINIA, D. E. Hewitt, Huntington; M. N. Offutt, Huntington.

THINGS I REMEMBER ABOUT THE CONVENTION

There are always a few things a man especially remembers when, back home, he muses over pleasant convention hours. There is usually one truly predominating thing which sticks and a number of other impressions, which, though possibly not quite so vital, are nevertheless equally pleasing to recall.

There was a good deal of satisfaction expressed over the choice of the new president. E. O. Robinson is a strong man with a level head and with a thorough understanding of hardwood problems. He is a truly worthy link in the illustrious chain of presidents who have headed the Manufacturers' Association.

The thing about which everybody talked most was the remarkable attendance, which contained practically no "dead wood;"

which was representative of the entire southern hardwood producing territory, which was earnest in its consideration of business and patriotic problems, and which showed more real pep and vim than has been seen in Cincinnati for some time. The volume of attendance was even more a source of gratification to President Burns and assistant to the president, F. R. Gadd, because of the upheaval in transportation facilities from all parties of the country.

In speaking of officials there were two ex-secretaries of the Hardwood Manufacturers' Association in attendance, as well as a number of ex-presidents. Lew Doster, who is now assistant to the vice-president in charge of sales for E. C. Atkins saw people, and Mr. Doster's successor as secretary, W. H. Weller, now in charge of sales for Offutt & Boice of Huntington, W. Va., were on hand and both showed considerably less worry than they used to when they were responsible for the smooth running of the association machinery.

R. L. Jurden, president of the newly formed American Hardwood Manufacturers' Association; B. F. Dulweber, second vice-president, and Directors E. A. Lang, M. B. Cooper and T. M. Brown were all in attendance at the Manufacturers' meeting.

There were a number of young ladies of Cincinnati who should be grateful to some of the lumbermen who were around the Sinton lobby during the convention. These young ladies were in charge of the sale of 250 Smileage books, and between what they bought themselves and what they made other people buy, the lumbermen came pretty close to getting the whole week's job done in two days.

A man who can put real pep into a convention smoker surely deserves all commendation he can get and then some. Frank Gadd has never said anything about having been a show manager, but he surely demonstrated that he knows how to pull things off in the right manner. The crowd wasn't a bit bored and stuck right down to the finish. The good time at the smoker is going to bring a good many back next year.

One of the unique features of the convention was provided by the Frampton-Foster Lumber Company of Pittsburgh. This outfit is surely a bunch of "go-getters." They are handling worlds and worlds of railroad material from all parts of the country to all parts of the country. There were five live wires from the Pittsburgh office on hand, namely: D. B. Frampton, P. E. Burke, C. D. Newport, W. E. Comstock and W. E. Hamner. These boys wanted to do something nice for the convention delegates so they had printed up a lot of attractive cards which contained the picture of a pretty girl, the name of the Frampton-Foster Lumber Company, and stated that "A gentleman is one who knows he is all right and then forgets it."

They also provided some fifty dozen very beautiful carnations, but did not leave these carnations to pin themselves on the coat lapels of the convention "eers." They provided a trio of pretty girls from the "Oh-Boy" company, which had a day off on account of heatless Monday, or as in the theatrical business, heatless Tuesday. These young ladies in the order of their size were: Latoria Jordan, Mabel Grete and Alicia Smith. If anyone intentionally got into the convention hall where the smoker was held without having a carnation on his coat he wasn't worth pinning one on. In fact, the remarkable thing about the fifty dozen carnations is that they could have gone so far when there were more than 600 people at the smoker and a good percentage of them insisted upon being decorated two or three times.

In speaking of the Frampton-Foster Lumber Company I was very much surprised on learning that with all its pep and vigor it is one of the oldest concerns in the country in the railroad material business. In fact, the Framptons have been in business for the past sixty-five years. D. A. Frampton is the originator of the concern, he now being eighty-four years old. He secured one of the first orders ever placed by the Pennsylvania Railroad for railroad mate-

rial, and the company has the original of this order in its files at Pittsburgh to this date.

The concern has spread out a good deal during the last two or three years and now has thirty-eight men in the field buying railroad material and has an office force of thirty located in the Bessemer building at Pittsburgh.

There was more or less credence given to a rumor current during the convention that a certain young hardwood man originating from Buffalo and now associated with his brothers in Memphis, has just become engaged. Up to the time of going to press the report had not been officially denied.

One of the most awe inspiring and depressing sights was in the erstwhile bed of the Ohio river, now one solid mass of dirty, ragged and ponderous ice cakes. The level of the ice bed is a good many feet above the normal level of the river and its surface is literally pock marked with the wreckage of boats, launches, barges and all kinds of river craft. Houses even and other structures are not unknown sights riding on top of or half submerged in the mass of frozen water.

Men experienced in river work declare that millions of dollars will be lost along the river and that it will be practically impossible to hold anything that is not now out of direct contact with the flow. It was depressing to see hundreds of well made and previously usable and useful barges, which it is said now bring in the neighborhood of \$3,000 apiece, twisted, battered and broken and thrown like straws in the discard on the river banks.

The trouble stretches way up into the headwaters of the Ohio and Mississippi and carries on down to the Arkansas and Mississippi shores. Many a log raft has gone riding on its way, one operator on the Big Sandy having lost in the neighborhood of 30,000 logs. But in spite of this, which seems almost a climax to operating troubles, the lumbermen showed a hearty courage and an indomitable spirit to "carry on" until the work is finished; to stay with the task of getting out the stuff for Uncle Sam and for the normal industries, and to prove up the statement that the lumbermen, being pioneers, retain the hardihood and the courage of those who have in the past invaded the wilderness to turn to useful purposes the resources which nature placed in inaccessible regions for the use of man.

Will Crawford, secretary of the Yellow Poplar Lumber Company, Coal Grove, Ohio, had a splendid time at the manufacturers' meeting until he got down with a case of measles. The doctor in Cincinnati threatened to put a fence around him. With a baby boy at home, he didn't know which way to run, but when Colonel Isaacson took the matter in hand everything went smoothly.

Col. R. H. Vansant was not present owing to his sojourning in Florida, due to the illness of Mrs. Vansant. Young "Van," the second tall poplar, and his partner, John E. McCall, in the Ashland Hardwood Lumber Company, Ashland, Ky., reported their Kentucky mill was turning out a lot of good oak and poplar and they anticipate the price will be a happy one for the new year.

The Texas delegation was presided over by A. Deutsch of the Sabine River Lumber & Logging Company, San Antonio. With him were Frank Keith of the Keith Lumber Company, Voth, Tex.; C. E. Walden of the Sabine Tram Company, Beaumont; A. O. Davis of the same company, Rex H. Browne of the Beaumont Lumber Company, H. G. Bohlssen of the H. G. Bohlssen Manufacturing Company, New Caney, Tex.; P. A. Ryan of the Phillip A. Ryan Lumber Company, Lufkin. The party went on to spend some time at Washington to assist in any way by co-operation with the Southern Hardwood Emergency Bureau and others in furnishing such hardwoods as will be needed from Louisiana and Texas. They are very enthusiastic about the new association, which aims to bring about a better exchange of views on production and the sale of their lumber. They were happily received and made themselves particularly happy in the entertainment of the newspaper boys and co-operation in the work of the convention, they being members of the hardwood manufacturers' organization.

—M.

List of Attendance at the 16th Annual of the Hardwood Manufacturers' Association at Cincinnati, Ohio, February 5 and 6, 1918

- A. A. Amburge, National Lumber Co., Cincinnati, O.
W. H. Abbott, Buskirk-Rutledge Lumber Co., Cincinnati, O.
A. W. Acker, Dawkins Bros. Co., Eastern, Ohio.
Frank E. Ackley, Haywood Bros. & W. A. Co., Chicago.
E. E. Allen, The Mowbray & Roberts Co., Cincinnati.
E. S. Anderson, Central Lumber Co., New York City.

Memphis, Tennessee

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

The Mahogany Operators Get Together

Close Co-Operation Will Follow Years of Friction

A HAPPY occurrence in the past month was the organization of mahogany importers, manufacturers and dealers in the United States, at Washington. Under the stress of the need for airplane work and other uses, the government called the mahogany people together and told them to organize and get busy to furnish the government with over one hundred million feet of mahogany annually. Most everybody familiar with the mahogany business will recall the inability to get that wood from Africa, Central Mexico and Cuba owing to lack of steamer room and the high freight rates, which have created a hardship in the business for a year or more. Inasmuch as last year's importation was about fifty-six million feet, and the largest importation ever made for one year was seventy-six million, you can understand Uncle Sam's need for mahogany. The fact that the government insists on Central American mahogany, not African, is another proposition that makes it a government necessity where whole-hearted co-operation of all operators is necessary, and they are anxious at this time to co-operate. The bringing together of these men in this association will be beneficial to the industry as well as to the country. The mills are located from New Orleans to New York, and as far West as Chicago. It is believed that before the month of February is over a close working arrangement will be made for turning in to Uncle Sam all stocks, including logs, logging contracts, and so forth, to insure the promptest delivery possible of mahogany for airplane work as well as for ship interiors, etc.

The officers of the association are: Thomas Williams, Ichibod T. Williams & Sons Company, president; R. S. Huddleston, Huddleston-Marsh Mahogany Company, treasurer; Charles H. Thompson, Lewis Thompson & Co.,

Inc., secretary; Alex Williams, Astoria Veneer Mills & Dock Company, Long Island City, chairman, Frank Otis, The Otis Manufacturing Company, New Orleans, J. C. Wickliff, C. C. Mengel & Bro. Company, Louisville, Ky., F. C. Leary, I. T. Williams Company, New York, and Charles H. Thompson, Philadelphia, form a committee to co-operate with the government in working out the proposition. It is believed, however, that before this paper goes to press, this will be consummated, or at least well on its way.

It is very pleasing to note the good fellowship existing between these men who never worked together before, but seemed to think the other fellow wore horns. However, now there is a happy feeling and the best kind of co-operation can be anticipated not only in government needs, but with the consuming trade in mahogany.

HARDWOOD RECORD wishes to extend its best wishes for the greatest prosperity for this organization.

Because it is practically impossible to obtain supplies of veneers from the usual sources in Arkansas, Tennessee and Missouri, due to the demoralization of freight traffic, the Blum Bros. Company, Marshfield, Wis., maker of cheese boxes, is adding a complete veneer cutting outfit to its factory at a cost of about \$10,000. It is to be ready by April 1, at which time the company hopes to have accumulated sufficient logs from the northern hardwood district to keep it in continuous operation throughout the year. The daily consumption of the plant is about one carload of veneer and the capacity of the new mill will be about 500,000 feet of logs per annum. About 300 cheese factories depend upon the Blum plant for their supplies of boxes.

Nearly all imported woods may be occasionally made into veneer, but those of real importance are mahogany, Spanish cedar, Circassian walnut, satinwood, rosewood and ebony.

CHAIRMAN WORKING COMMITTEE

R. S. HUDDLESTON, NEW YORK, N. Y.,
TREASURER

CHARLES H. THOMPSON, PHILADELPHIA,
PA., SECRETARY

Veneered Work for Enameled Furniture

Enameling Is Not Infrequently Done Upon the Surface of Expensive Woods

THE PRESENT VOGUE of enameled furniture is of interest to the manufacturer of veneers and panels for the reason that it changes in some degree the character of the demand for these products. The furniture manufacturer who is enameling over his veneered work is not so much interested in the proposition of appearance or figure, since he is supplying the element of looks through the opaque finish which he applies. He is more interested than anything else in the matter of the right kind of surface for the application of the finish.

During the past season or two the furniture markets have had a noteworthy increase in the amount of enameled goods offered to the trade. In Chicago during January, for instance, enameled furniture was well to the fore, and not only were there a great many exhibits in which it was featured, but the dealers were reported to be buying liberally. This indicates a substantial demand for this kind of goods, and hence a more or less permanent place for enameled furniture in the trade. Consequently conditions as they are affected by this feature are worth studying from the standpoint of the man whose products are to be covered with enamel instead of a transparent varnish.

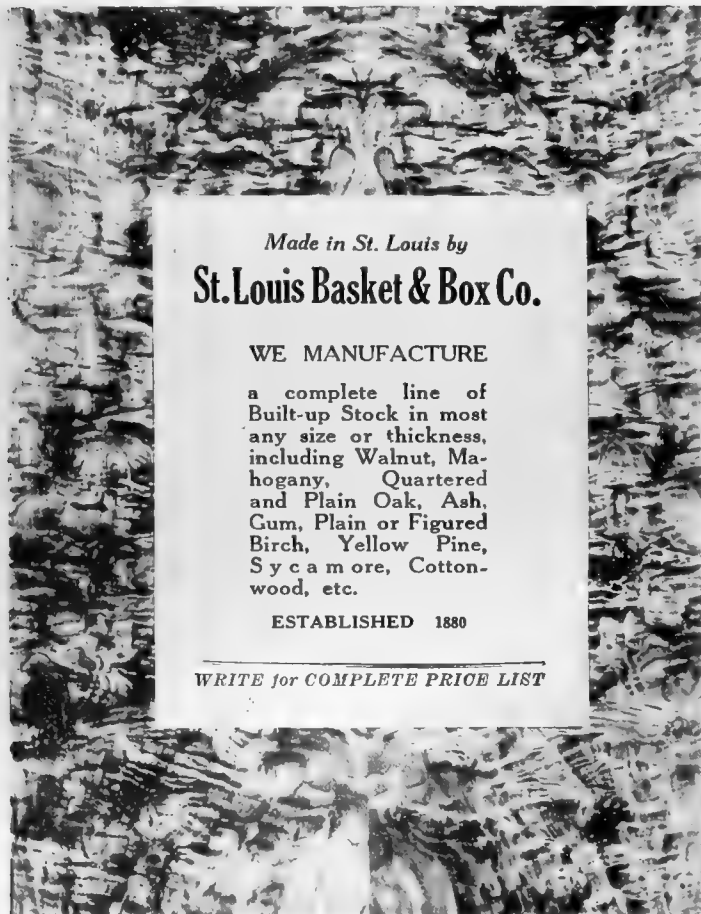

When ivory enamels first began to appear a few years ago on a big scale they were seen first in connection with bed room suites. For some time it seemed to be taken for granted that this was about the only direction in which the manufacturer could go with his enamels, but the line of enameled furniture which it is possible for a dealer to put into stock is now considerably broader than this. No one has been daring enough to put out enameled furniture for the living room or dining room, but there are plenty of breakfast room suites, while the outdoor furniture of all kinds, including porch furniture, is enameled almost as a matter of course.

Furthermore, the chair manufacturers have taken hold of the enameling proposition with such avidity that one has reason to be surprised, until it is realized that these producers have been looking for some way by means of which to inject a note of novelty and interest into their goods, which for some time have lacked these elements in the degree desired by the manufacturer who is seeking the development of an earnest demand on the part of the trade. Enameled chairs, not only for children, but in other types of seating, are to be seen in the exhibits of leading manufacturers, who have also shown their desire to break away from precedent by the use of novelties in upholstery cloths, introducing new and somewhat bizarre colors in place of the dark and somber shades which have been principally in use for so long.

Of course, the panel man is not so much interested in the chair trade as in that of the case goods manufacturers, although a good many chair seats are veneered. Upholstered chairs have little or no veneering about them, and hence the tendency in this part of the furniture trade is most interesting as an evidence of how the industry as a whole is developing enameled goods, and thereby changing in many respects the situation with reference to the demand for veneers and panels.

It has been assumed by a great many people that the principal reason why veneered work is employed in furniture making is because of the improved appearance which it is possible to obtain by the use of face material which shows unusual figure or is handsome to an unusual degree in some other way. From this standpoint the use of veneers has been a concession to beauty rather than utility, and the veneered product has held its own because of its ability to make a more attractive product than would be possible otherwise.

This argument is not sound because laminated woods are employed freely in lines where the element of appearance does not come into play. For instance, automobile frames are often made of layers of wood rather than single pieces, for the purpose of strength and resiliency; but if any one had held to the notion that there

is no excuse for using veneers when the matter of the appearance of the wood is not the prime consideration, it would be eliminated by consideration of the present situation in the furniture business.

Practically all of those who have been manufacturing furniture with veneered tops, end panels and drawer fronts, when their products were being finished with varnishes which covered but did not hide the wood, are continuing to employ the same materials today. They have not changed the character of the material used simply because of the change in the finish. Veneered work having proven satisfactory heretofore, whether because of the convenience with which it may be obtained or for other reasons, the manufacturer is continuing to employ it now, when the element of appearance of the face veneer does not figure in his calculations.

However, as suggested above, the quality of the material over which the enamel is spread is a factor that is being taken into account. The finisher wants a close-grained surface which does not absorb too much of the material. This makes the best base for enamel to be laid over, and among the woods which are pronounced by furniture men to be especially suitable for this work are birch, gum, maple, beech and elm. The first three on this list are already generally used in the trade, the first two being prime favorites for other reasons, so that it is hardly likely that there will be any necessity for change in the character of the material used, as a result of greater attention being paid to the suitability of the face from the standpoint of furnishing a foundation for enameling.

Gum seems to be living up to its reputation as a general utility wood, running birch a close second in this respect. Birch won its first reputation as a wood which could be finished to resemble mahogany, but now is being chosen on its merits in many cases, and offered as birch and not as a mahogany substitute. Gum went through the same process, being introduced as the best possible material with which to furnish a pseudo-mahogany or American walnut, but there is comparatively little gum being sold today which is not offered and advertised by the manufacturer and the dealer as gum. That both woods are proving most satisfactory in the work of enameling is merely a further tribute to their general value and usefulness, indicating one more reason why they may be considered among the most popular of all cabinet woods.

Even if there were cheaper woods which could be substituted for these in the enameling work, it is doubtful if furniture manufacturers would take much pains to seek them out. In the first place, the materials referred to are familiar and well understood. They are handled in the factory without difficulty, because everybody knows just what to expect of them. From drying to finishing, they offer no problems which have not been met and solved already. Hence, there is always a disposition to continue the use of time-tried favorites, rather than turn to something else which may temporarily have advan-

tages, but the handling of which may develop troubles which will more than offset the initial economy.

Another reason is that, regardless of the character of the finish, the customer likes to know that the wood underneath is a product that one can be proud of. To show how true this is, one of the leading Jamestown manufacturers, who has been selling enameled tables for a number of years, has a considerable demand for one number which is made of mahogany throughout. The use of mahogany for enameling might be considered extravagance from one standpoint, and yet the man or woman who buys a table of this character, and who casually calls the attention of friends to the fact that the wood underneath the enamel is mahogany, the aristocrat

of cabinet materials, experiences a degree of satisfaction that could hardly be equaled in any other way.

It is the same principle that makes a man buy a tailor-made suit when he could get one ready-made that would fit him just as well. It adds to his sense of self-respect to have something a little better than necessary. Some salesmen, just before they prepare to call on a particularly tough prospect, indulge in the best possible lunch. It makes them feel just a little bolder, just a little more confident of their own abilities.

So the ultimate consumer likes to buy furniture which is good even in those parts which don't show. For that reason mahogany is none too good for enameling, and the woods which have established themselves in the regular work of veneering, and have been most suitable for the application of the usual finishes, may be relied on to continue through the vogue of enameled furniture. They have qualities which make them suitable for this kind of finish, and they also possess the confidence and favor of the public, a factor which even the most technical finishing expert would hesitate to discard without hesitation.—G. D. C., Jr.

Letters from a Panel User

ABOUT COSTS OF DIFFERENT KINDS OF POWER

Monroe, Mich., Feb. 5.—Low cost of production is an absolute necessity in every business, especially in the panel business, for the reason that the margin of profit is so small. In order to get low production we must analyze all departments. We must know that we are manufacturing as low as the keenest competitors. We must know that we are buying right and that the goods are being produced with the most modern equipment at the lowest possible cost, quality considered. In order, however, to get low cost we must not forget the cost of power. Every manufacturer should make an investigation of the cost of producing his power. Perhaps you can produce it as cheaply with your steam plant at your competitors using electric drive. Ninety-nine chances out of a hundred, though, are that you cannot do so.

Therefore, I would suggest that you have an expert determine this for you. Your books will show you the cost of your power, i. e., coal, oils, packing, firing, engineer, depreciation on power equipment. Be satisfied that you know this cost absolutely. Borrow or rent a motor of sufficient power to turn your load. Have the central power plant connect wires to their line for the test. They will be glad to do so and in most cases make no charge for this service, as they are after business. It is a simple matter to determine the horse-power required for every machine, also the power waste, due to unnecessary countershafts, line shafting, etc. You have the central power rate. After you have completed your tests it is a simple matter to determine the cost when buying your power, compared with your present cost.

The writer made this suggestion to a wood working manufacturer a few years ago. I have since been told that he paid the entire cost of motor installation ten months after operating with electricity. The manager informed me that they needed waking up.

When the purchase of electric power is contemplated, the first cost of the motor is frequently the factor which overshadows all else in the mind of the panel manufacturer.

In many panel plants some machines are operated continuously ten hours per day, and in the same place there may be others which are run only one or two hours per day. The work should then be so arranged that the machines necessitating intermittent operation be used without throwing all on at the same time. Under

these circumstances a comparatively small motor running at high efficiency may be installed to drive all such intermittently-used machines in a group through the intermediary of a short length of shafting.

The practical panel manufacturer will only consider the application of electric power if by so doing he can see clearly that he will thereby insure, first, uninterrupted operation, and second, a saving in the cost of production either by increasing the quantity of the product with a given tool equipment, or by a reduction in operating expense. A lot of manufacturers of wood-working machinery now sell their tools provided with proper connections, so that all the user has to do is to arrange for wiring up. Again, machine manufacturers will be glad to co-operate with you. If you do not care to go to what may seem trouble to have the tests made, which were suggested above, suppose you write to the various manufacturers of the machines you have installed and learn what power is required for each machine. By so doing, allowing a reasonable amount for countershafts, you can very readily approximate whether or not you will save money by changing to electric drive. I have yet to find the first veneer or panel manufacturer who has regretted changing to electric drive.

There are many considerations to be taken into account in determining whether it will be more economical to buy current from a central station or to establish a separate plant. While there are strong advocates of both methods, nevertheless, the majority of engineers grant, I believe, that sometimes one and sometimes the other will be more economical.

If your plant is large enough to warrant the expense I would suggest your employing a consulting engineer.—A. T. D.

Veneer Panels for Airplanes

Some interesting facts are brought out by an examination of the specifications on which the government has let contracts for 3,000 airplanes.

Each machine requires in its construction 143 veneer panels, all except two being 3-ply, and two are 5-ply. Approximately 500 square feet of panels are required for each machine.

Twenty sizes of panels are used. The longest is 144 inches long, 11½ inches wide. The largest in area is 72x37 inches. The smallest is 60x4 inches. More than half of the panels used in the construction of the airplane are 60x4 inches. They are the wing ribs. The largest panels are used in the equalizers.

These panels are all made of mahogany fronts and backs, but the cores or cross-pieces inside may be of yellow poplar.

Panels of a width under fifteen inches must be in one piece; but those of greater width may be jointed in proportion of the widths as compared with fifteen inches. Where crossbanding is jointed, the edges must be butted and jointed the same as for face work.

These panels may be glued up in stock of greater widths than specified, but so as to produce the widths required, and may be shipped without cutting.

The panels are required to be made with water-proof glue or high grade hide glue.

The total number of panels called for in the contract for 3,000 airplanes is 439,000, and of these 4,500 are 5-ply, the others are 3-ply. On the basis of 500 square feet of panels to the machine, the total for the whole order is 1,500,000 square feet.

The Roddis Lumber & Veneer Company, Marshfield, Wis., has accepted a \$50,000 order from the French Government for veneer material to be used in the construction of aircraft. Work on the order is now under way.

Reports presented at the annual meeting of stockholders of the Medford Veneer Company, Medford, Wis., showed that while operations in 1917 were only fairly profitable, prospects for 1918 were more encouraging as arrangements have been concluded for a more ample supply of logs. All officers were re-elected.

Costs, Market Conditions and Prices. Have Enthu-
siastic Meeting, Replete With Optimism

The leading speakers at the annual meeting of the Northern Hemlock and Hardwood Manufacturers' Association held at the Hotel Pfister, Milwaukee, Thursday and Friday, January 31 and February 1, were well-known men in or associated with the lumber business.

With President J. J. Lingle in the chair, the meeting opened with a few words from him, after which he introduced Charles S. Keith of Kansas City, who in his capacity as president of the Southern Pine Association, spoke on the subject, "Relation of the Government to the Lumber Industry." His address was in effect a warning against a probable effect upon the lumber business of

session of the government of the progress made during 1917. He went on to talk of the work of the last three years, and gave a suggestion of what may be expected during the coming year.

The Northern White Cedar Shingle Manufacturers' Association met in the afternoon, the lumber association giving way on its program to the shingle men, many of whom are members of both associations.

E. A. Hamar, Chassell, Mich., is president of the shingle association and O. T. Swan is secretary. The feature of the session was an illustrated talk by Dr. Hermann Von Schrenk of St. Louis. Dr. Von Schrenk said that the big thing to be done is to manufacture

GEO. E. FOSTER, MELLENS WIS., TREAS-
URER

inattention to the many new and vitally interesting problems which arise every day.

Mr. Keith is also chairman of the governmental relationship committee of the National Lumber Manufacturers' Association. He described the work of that body and also told of his version of the Chamberlin bill aimed at the control of sawmills of the country. Mr. Keith made the interesting prediction that wholesale and retail prices will both ultimately be fixed by the government.

L. C. Boyle of Kansas City followed Mr. Keith and emphasized the necessity of actual knowledge of stumpage cost as well as manufacture. "In fact," he said, "the biggest problem before the lumber manufacturing trade today is a deep study of scientific means of arriving at cost of producing and selling lumber." He urged this as a measure calculated to result in a satisfactory and fair level if price fixing ultimately becomes a part of government supervision of industries.

Another interesting speaker of the morning was A. L. Osborn of Oshkosh, who reported for the bureau of transportation and legislation. His talk digressed on the subject of labor and did not give anything encouraging as to the transportation situation.

The last address was given by B. G. Packer, who spoke on raising of cattle and sheep on cut-over lands. This talk was full of interest. Such subjects are of vital interest to the lumber trade of Wisconsin, which faces the problem of profitably and satisfactorily disposing of cutover land.

O. T. Swan, secretary of the association, closed the morning

the kind of shingles the consuming public wants, and those that will receive the O. K. of the fire insurance companies.

STRENGTH SHOWN IN MARKET REPORT

The Friday morning session was opened with a report by H. H. Butts, chairman of the bureau of statistical and educational information.

Mr. Butts pointed out that it was the function of his committee to follow closely the pulse and trend of the market, and to present frequently to the members a detailed statement of the market situation, giving specific information on those controlling factors, such as the current values of yellow pine and other competing woods; the comparative status of stocks on hand and probable production and the current demand. He pointed out that his work was of a purely informatory character and that due to the carefully selected personnel of the committee, the committee having access to wide sources of information and coming from widely different parts of the association territory, its reports were very representative.

Mr. Butts took up the subject of the co-operation of the members of the association, and among other things he said:

In addition to the fine personal co-operation we have had, I want to take this opportunity to thank the members of the association as a whole for the way they have responded with a report of stocks on hand, etc., and in the same breath I want to make myself just as plain as possible in the condemnation of those who have not co-operated in this respect. Think of having to make four or five requests sometimes for this data.

In every poll that has been made the last year after the Secretary seems to have extended his resources in this respect, I have written two and three personal letters and in several cases I have been politely informed that the delinquent had something else to do besides filling out the blanks in question. Now, fortunately, these members are in the minority, probably possessed with the idea that because they are paying their little old thirty cents annually in dues that it is up to the association to guarantee them a profitable business. Gentlemen, any firm that cannot sit down, and in less than one hour's time give a conservative report of his stock on hand, sold and unsold, had better call in an efficiency expert or a receiver. How can you conduct successfully the selling end of your business if you do not know the status of your stock on hand?

The speaker discussed the market as he sees it at this time, quoting values at which various members are now reporting sales and pointing out in particular that in view of the increasing production costs it will doubtless be necessary for the manufacturers to make increasingly better sales if they continue to meet these costs. At the close of his report Mr. Butts acted as chairman of the meeting and called upon a number of the members to discuss market conditions as they see them and to report on the sales which they were

Mr. Goodman emphasized though that in this wood the spread of fifteen dollars between 8/4 and 6/4 is not representative of the market. He said that there is no possibility of a break in the market.

Mr. Butts said that the members should keep the committee informed of cases where the list does not reflect the true market.

A. L. Osborn expressed the absolute conviction that with increasing costs, prices will further tend upwards.

Edward Hines then gave one of the most interesting and meaty talks of the meeting. He said he has observed during forty years of lumbering, that the past proves the future; that the trade has never realized the real worth of lumber. The gist of his talk was that in spite of present high prices, the lumber trade is really not making any money because of excessive cost of stumpage and manufacture; that with costs figured properly, that is, figuring the replacement value of stumpage as present worth of stumpage and replacement value of lumber based on present worth of stumpage,

making. The discussion, which was very actively participated in for nearly two hours, brought out the fact that many sales are being made at much better prices than many of the members present had believed possible, showing clearly that the market at the present time is very strong, both actually and from a statistical and argumentative standpoint.

George H. Chapman urged that members prepare themselves to benefit from the reports of the committee, which is distinctly authoritative and can be made even more so by increasing the number of reports of sales they contain.

He said he personally has an index of every sale reported since the reports started. Mr. Chapman said that in his twenty-nine years of selling he had never before felt so sure of the lumber market and that he now looks for strong market in all things. He expresses the belief that commodity prices will never return to the former level. He anticipates a large trade in retail centers as soon as the farmers can get dug out of the snow and start their spring work, and he said that there will be need of every foot of lumber that can be manufactured. He said that stocks are rather short; that the box factories are really up against it for material.

C. A. Goodman expressed himself as surprised at the lack of confidence in thick hardwoods. He said that the outlook is distinctly strong and that actual sales showed this to be true. Reporting from actual sale records he said that on basswood all items are selling on list or better; the same is true of ash and beech, the latter being especially strong in 6/4. Rock elm is selling above list.

plus present cost of manufacture, there would not be any profit on the books at all. He instanced an interesting case illustrating the fact that present methods of figuring prices on lumber are wrong. Advances, according to Mr. Hines, should be made on a percentage of former prices rather than at so much per thousand or so much per car. He told of one case where in approaching a large manufacturer who buys almost a million feet of lumber a year, but much more in other commodities, he was faced with the necessity for getting a price commensurate with the increase in cost of other items, which had run from fifty to 150 per cent above last year. Therefore, in place of figuring an increase in dollars and cents per thousand or per car he merely named an advance of a certain per cent, which struck the buyer as reasonable in comparison with other items. Thereby he brought his price to a point where it pretty nearly represented the increased cost of manufacture.

Mr. Hines prophesied that birch will soon be bringing \$75 per thousand, and made the interesting statement that in his opinion, if right charges are made for replacement no Wisconsin mill is now showing a profit. He emphasized and urged that even with high prices prevailing now, manufacturers should not be satisfied, as costs have increased even more rapidly.

Mr. Hines was distinctly optimistic as to the future. He expressed himself as believing that immediately after the war all the lumber will be needed for which shipping room can be found. He said that even now there is a decided tendency to increase building

The planing mill man should give preference, in buying lumber, to the mill that takes infinite pains with the piling to keep its lumber straight, for straightness is always important. You probably know what it means to put crooked or warped stock in a door frame, but do you fully appreciate the advantage of also having nice, straight stock for casing and base?

Occurrences at Washington Interesting to Lumbermen

Personal Mention and the Activities of Various Boards and Committees

Horace E. Taylor, after serving three months on War Industries Board, has returned to Buffalo and has been succeeded in Washington by Walter E. Chamberlin, who is interested in John M. Woods & Co., East Cambridge, Mass., and the J. M. Woods Lumber Company, Memphis, Tenn.

While President Wilson has intimated that he will press Congress for legislation extending government control, including price regulation, over many necessities, of which the president is understood to regard lumber as one, hardwood men who have been in touch with the government operations here do not believe that it is contemplated at this time to fix hardwood prices. Some say that such prices never will be fixed. A report that grades and prices for vehicle stock have been fixed has been officially denied. It is estimated by hardwood men that 100,000,000 feet of vehicle stock has been required for army vehicles and spare wheels. This is on the basis of 700 feet per wagon.

Investigations have been made into the possibility of using furniture, sash and door, and other woodworking plants for relieving the overburdened wagon factories in connection with the production of necessary spare parts for army wagons and vehicles, thus releasing a portion of the existing wagon manufacturing capacity for the production of farm wagons. It is also proposed to use steel wheels for army kitchens, thus relieving the shortage of seasoned material for wooden wheels, and the development of additional gun carriage capacity through the transformation of existing plants.

The navy has gone on the market for 265,000 feet of Philippine mahogany for delivery at Norfolk, Va.

Bids to Be Opened

The general supply committee of the government is out with an announcement that bids will be opened here March 6 for offerings to supply the government departments in Washington with lumber, millwork, packing boxes, etc., during the fiscal year beginning July 1 next. The specifications call for numerous items and lots of hardwood and softwood lumber for various purposes, including ash, basswood, birch, cherry, mahogany, maple, oak, poplar, chestnut; also cypress, yellow pine, white pine, sugar pine, flooring, hickory, laminated wood, etc., in many sizes, lengths, qualities, grades and varieties and for many purposes, including moulding, posts, shingles, veneering, baseboard, doors, labels, maple doweling, plugs, rollers, sills, stakes, etc.

Boxes by the thousand are also wanted next fiscal year by government departments here. These bids should not be confused with the war contracts that are being let by various branches of the government. The former are for strictly "home consumption" in the department buildings here.

The Andrew C. Sisman Company of Detroit, which has been bidding on joinery work for government wooden ships, is reported to be on the market for quantities sufficient for fifty vessels of such materials as studding, sills, capping, decking, sheathing, ceiling, etc.

It is reported that birch for airplane propellers has been recently bought by the government through the Northern Hemlock and Hardwood Bureau. Major Charles R. Sligh, formerly of the aviation branch of the service, has been succeeded by Lieutenant Edward L. Ryerson of the signal corps. The Forest Service is sending two experts into the southern Appalachian, the White mountains, Adirondacks and Maine to study spruce timber with a view to using some of it for airplanes.

The service has also recently awarded a contract for 24,000,000 feet of Sitka spruce, much of it suitable for airplane stock, in the Tongas national forest, Alaska, to the Craig Lumber Company of Craig, Alaska.

The West Coast Lumber Emergency Bureau expects to furnish 100,000,000 feet of airplane stock, fir and spruce, this year, under the improved methods of production that have been adopted by the

government. The bureau expects to be cutting 10,000,000 feet per month. A bill has been introduced in Congress for legalizing the cutting of airplane stock from National forests without complying with existing laws, which require thirty days' advertising before a sale is made.

Government lumber purchasing and construction officers were warned recently by Dr. Nichols, an agricultural department expert on borers and other injurious insects, that care should be taken to keep these pests out of timber and lumber before it is used and out of the wood in buildings, ships, airplanes, etc., after they are completed.

The Heatless Monday Order

Thanks to protests from lumbermen, woodworking plants and other business interests, it is believed the "heatless holiday" program is checked so far as mills are concerned. Recent rulings as to the application of the plan have been issued by Dr. Harry A. Garfield, Federal Fuel Administrator, as follows:

(A) Woodworking mills not otherwise exempted may operate only to the extent that their product is placed in their own yards for seasoning. This applies in general to mills sawing green timber into lumber.

(B) Other woodworking mills not otherwise exempted, which use their own waste as fuel, may operate to produce sufficient fuel to prevent injury to their plant from freezing.

(C) Such woodworking mills as are accustomed to supply fuel to householders in their immediate neighborhood must apply to their local fuel administrator for permission to operate to such extent as is necessary for the welfare of the community, such power of discretion being given local fuel administrators under Section 8.

Another thing lumbermen are protesting against is the announced policy of Director General of Railroads McAdoo not to include in the government system of railroads a great many tap lines and other short lines that he does not deem necessary for government purposes. Business interests and people generally in the regions affected have told their senators that to leave short lines out in the cold will seriously injure them and put many of them out of business, to the detriment of the communities and the industries, including agriculture, that they now serve.

The Government's Building Plans

The government is reported to be building a big plant at Collinswood, Tenn., for the distillation from hardwood and other wood of wood alcohol and the manufacture of other by-products of wood* that are needed in the production of munitions and other necessary war materials. The plant will cost \$2,000,000 and employ 1,300 men, it is said.

Government housing plans are rapidly getting into shape. The lower house will soon pass a bill already O. K.'d by the Senate providing \$50,000,000 for housing operations by the shipping board to house shipbuilders. The War Department wants \$1,000,000 from Congress to provide dormitories and homes here for government employees. The Labor Department is whipping into shape a comprehensive plan for housing under all departments of the government, including the navy and the ordnance bureau, which are having difficulty finding space for workmen engaged on government contracts. Housing programs are being prepared for Sparrows Point, Md.; Newport News, Va.; Charleston, W. Va.; Newport, R. I.; Bridgeport, Conn.; Bethlehem, Pa.; Wilmington, Del.; Newark, N. J.; Quincy, Mass.; Bristol and Hog Island, Pa. Large quantities of lumber, including hardwoods, will be needed.

Government control over building construction operations, public improvements and the issuance of securities for various purposes is proposed in a bill drafted by Secretary of the Treasury McAdoo, which Congress is asked to pass, to create a war finance corporation, to pass upon the above class of projects and give assistance to financial plans that are thought necessary for war industrial purposes. There seems to be a good deal of opposition to this measure.

The estimate of 3,000,000,000 feet for portable houses for Amer-

ican troops in France is being talked of by lumbermen here on government business. The portable house is favored by the authorities of this government for use abroad, owing to the little labor needed in setting it up. Portable houses will be sent over by the shipload as soon as tonnage is available.

Portable houses have also been adopted by the Belgian and French governments for reconstruction purposes in the invaded regions. It is reported here, for the same reason that this type of structure is liked by American officials. This country naturally would furnish most of the portable houses needed by France and Belgium.

The development of cutover lands on a great scale after the war, for the benefit of the returned soldier and city worker desiring to go onto the land, is advocated by Benton MacKaye in a recent report to the Department of Labor. He urges that there should be broad and full co-operation between the federal government, the states and the land owners, in carrying out this project. The stumps should be pulled up and perhaps buildings erected for the settler. The author says he sees signs of government tendencies in that direction.

The agricultural appropriation bill is passing the house this week, making fair provision for the Forest Service, also for fighting the white pine blister rust and other tree diseases and insects.

Bills have been introduced in Congress to authorize the logging of timber on the Red Lake Indian reservation forest, Minnesota, and to grant to the state of Minnesota for forestry purposes a number of unsurveyed lands on islands in the state.

The Wooden Ship Program

Chairman Hurley of the Shipping board recently stated that the board had the wood and steel necessary for shipbuilding, but needs 300,000 additional workmen to build ships. They are being recruited in a voluntary manner. For lack of labor the shipyards are reported as going at half capacity or less. Lumbermen and shipbuilders from Maine, here in Washington, declare that good ships can be built of Maine timber without drawing supplies from the Pacific Coast, the Sound or elsewhere. James Hayworth, who is in charge of the wooden ship production, is quoted as authority for the statement that contracts for sixty more wooden ships are soon to be let.

United States Forester Henry S. Graves, who had been in France since the early spring, has returned to Washington to take up important work on this side of the Atlantic.

There has been complete unification of the several organizations engaged in relief work for the benefit of the American forestry regiments, according to P. S. Ridsdale, secretary of the American Forestry Association and treasurer of the welfare fund committee. Mr. Ridsdale announces that contributions for the two regiments have been sufficient to provide each member of the organizations with a sweater, but that funds are needed for other necessities for the men.

A new national forest has been created in Alabama. It now contains 22,500 acres, and it is expected that it will ultimately be increased to 150,000 acres.

The total amount of timber cut on the national forests in the fiscal year 1917 was \$40,612,000 board feet, as against 714,505,000 board feet in 1916.

About 200 board feet of wood is used in the actual construction of the average airplane. To obtain this material it is ordinarily necessary to work over about 1,500 feet of select lumber, which often represents all that can be used for airplanes of 15,000 board feet of standing timber.

According to one of the German forestry journals, the kaiser, in 1908, killed 1,995 pieces of wild game, including 70 stags, elk and roebuck. At that time he had slaughtered a total of 61,730 pieces of game, more than 4,000 of which were stags, and was the leading exterminator of wild life in the world. As a slaughterer of men, women and children since 1914, however, he has been the foremost exterminator of human life in all history.

Business Coming to Lumbermen

It is reported that some lumbermen have been abusing the "government business" label on their lumber shipments. The result is a warning issued by Director of Lumber Downman to the lumber bureaus and associations that the "government business" pass to transportation should not be used except on material actually ordered by the government.

Hardwood lumbermen who have stuff to sell will doubtless be glad to hear that Andrew C. Sisman & Co., Detroit, has received a contract for chests with which to equip submarine boats, and that the Pacific Coast Sash & Door Company of Los Angeles and the Bailey Table Company have received airplane contracts.

Frank Fish estimates the orders received by his bureau from the government at 2,360,000 feet. In addition he believes that con-

siderable more lumber has been supplied by it to government contractors or others referred to the bureau by government officials. He says that Chief Inspector Hoover of his association has made arrangements with the signal corps of the army to use the National Hardwood Lumber Association's inspection service on airplane material.

Mr. Fish estimates that 125,000,000 feet of thick oak is required for making wagons, carts and trucks for the United States Government. He says that seventy-two contractors for these vehicles are buying their hardwood supply direct from the lumbermen, although it has been reported that the vehicle people have a central purchasing committee.

The government wants 500 pieces of clear oak 22' long, 5" wide and 2½" thick for lifeboats to be carried on large ships. Some 300,000 feet of chestnut and oak switch ties and a quantity of low-grade hardwood lumber will be needed in the construction of the government twin powder mills at Nashville, Tenn., and Charlestown, W. Va.

Orders for 12,000,000 feet of lumber have recently been given to the Alabama Mississippi Emergency Bureau for constructing the big government shell factory at Williamsburg, Va.

Major Charles R. Sligh and Oswald West, ex-governor of Oregon, recently appeared before the senate committee on commerce and severely criticised Pacific coast lumber interests, especially the spruce men, and in particular George S. Long and the Weyerhaeuser timber and lumber interests, whom they charged with preventing rapid production of spruce timber for airplane stock for the American and allied governments. They said that this policy on the part of the lumber people was due to the alleged fact that in producing spruce on a large scale they would necessarily have to cut a lot of spruce and fir which the government does not want and which they could not well sell. Sligh and West urged that the West Coast Lumber Emergency Bureau be reformed and that one expert man be placed in charge of lumber production for the government in the Pacific Northwest. It is rumored that W. H. Bloedel of Seattle has been selected for this work.

Charles Piez, general manager of the Emergency Fleet Corporation, has issued the following statement:

The work of the state councils of defense and of the agents of the Public Service Reserve is enrolling 250,000 skilled workmen for the United States shipyard volunteers is of permanent importance in the early winning of this war, for on earnest labor depends the early construction of our merchant fleets. Within 60 days three huge government yards will be completed, and soon thereafter more than 60,000 workmen will be required to furnish for them the three eight-hour shifts necessary if these yards are to turn out their ships according to schedule. The Shipping Board now has 716 shipways; 302 are for wooden ships and 414 are for steel construction. The yards in which they are established are only working one eight-hour shift per day six days a week. This is monstrous. If we are to keep ahead of the submarine we must run three shifts per day fifty-two weeks in the year.

Our program calls for the construction in 1918 of eight times the tonnage delivered in 1916 at a cost of more than a billion dollars. The shipping board has the necessary yards, the materials and the money; all that is lacking is a spirit in the nation that will send a quarter of a million American mechanics into the yards to give their best and most efficient work.

I am sorry to say at the present time the native born American is not the mainstay of the shipyard, for he is there only to the extent of thirty-five per cent of the men employed, and to the extent of sixty-five per cent we are forced to depend on foreign-born labor.

Income Tax Ruling

The income tax regulations were also issued recently. They include the following:

Depletion—Timber.—In the case of timberlands, the fair market price or value of timber standing March 1, 1913, or the cost of the timber where the purchase was made subsequent to March 1, 1913, will be the basis for calculation of depletion, and this value as of March 1, 1913, or cost when subsequently purchased, is not to be exceeded for purposes of deduction in returns of income. The whole of such value is to be distributed over the entire amount of standing timber on these respective dates.

Article 173. Corporations owning timber land and logging off the timber and manufacturing it into lumber, will, if the timber was acquired prior to March 1, 1913, be permitted to exclude from gross income either through a deduction from gross receipts or through a charge into the cost of manufacturing the timber into lumber, an amount equivalent to the fair market price or value of the standing timber as of March 1, 1913.

In order to secure the benefit of this deduction such corporations must set up on their books as of March 1, 1913, the fair market price en bloc, of all the timber then owned by them, and then, by dividing this en bloc value by the estimated number of feet (board measure) in the entire timber holdings, the per unit value or price as of March 1, 1913, will be ascertained, which per unit price or value will be the basis for measuring the amount which may be added to the cost of manufacture, or deducted from gross income, until the en bloc value of the entire holding as of March 1, 1913, shall have been extinguished, after which no further deduction on this account shall be allowed.

The same rule will apply in the case of timber or timber lands purchased subsequent to March 1, 1913, the only difference being that actual cost—that is, the gross purchase price—shall, in making the computation, be substituted for en bloc price or value as of that date. If the entire market price or value of both timber and lands as of March 1, 1913, or the entire cost, if acquired subsequent to that date, is extinguished through a deduction from gross income for timber used, or through a per unit charge to cost of manufacturing lumber, then the entire amount realized from the logged-off lands or for other salvage will be returned as income of the year in which such lands are sold or disposed of.

If the timber or timber lands are sold en bloc, the gain or loss will be ascertained on the basis of the difference between the fair market price, or cost, and the selling price, according as the property was acquired prior or subsequent to March 1, 1913.

The fair market price or value of timber or timber lands as of March 1, 1913, is the price at which the property in its then condition, and with the circumstances then surrounding it, could have been sold for cash or its equivalent. This value must not be speculative, but must be determined without taking into account any prospective profits that may result from the manufacture of the timber into lumber. It must be, as the law contemplates, a fair market value and, once determined, must be set up on the books, and, as the measure of a stumpage deduction for income-tax purposes, must remain constant and can not be increased except as new purchases are made at a higher average cost. The value so set up as of March 1, 1913, will be subject to the approval of the Commissioner of Internal Revenue.

Government Building Policy

Secretary McAdoo has authorized the following statement:

Because of the interest of the Treasury Department in the conservation of labor and credit during the period of the war, I have received several inquiries as to whether building operations of one kind and another should be discouraged. With regard to plans for public buildings under the control of this department, I have stopped letting contracts except in cases where they are absolutely necessary. Home building is an excellent thing in normal times, but at present, unless there is a real shortage of houses for war workers, I strongly advise that materials, valuable labor and credit be not utilized for this purpose. Whether homes should be built should be determined strictly by the urgency of the need.

Excess Profits

The excess profits regulations were on Saturday finally approved by the secretary of the treasury and sent to press. The provisions which are of most general interest to the public are those which deal with the definition of invested capital of corporations and partnerships, and with the treatment under section 210 of cases in which the capital cannot be satisfactorily determined and under section 209 of cases of nominal capital.

The provisions of section 210, which permit the deduction to be computed by reference to the deductions as determined in the ordinary way in the case of representative concerns engaged in the same trade or business, are held to apply to a number of classes of exceptional cases.

Gains or profits from transactions entered into for profit but which are isolated, incidental, or so infrequent as not to constitute an occupation, and income from property arising merely from its ownership, including interest, rent and similar income from investments, are in the case of an individual not subject to the excess profits tax, except in those cases where the management of such investments really amounts to a trade or business.

Other provisions of interest to individuals are those which provide that the profits of the taxable year may, if put back into the business, be included as invested capital, and that a member of a partnership who receives a salary from the partnership is also entitled to a deduction of \$6,000 in computing his excess profits tax upon the salary.

Thinks Commission Will Fix Rates

J. H. Townshend, secretary manager of the Southern Hardwood Traffic Association, announces that he has received information from Washington that the railroad bill will undoubtedly have a section in it, when finally enacted, leaving the rate-making power in the hands of the Interstate Commerce Commission, as at present, instead of granting this to the director-general of railroads. The association has, through both its officials and its members, recently kept the wires hot between Memphis and Washington urging that no such power be conferred on the director general, and it would seem that their efforts are about to be crowned with success.

The association has also received from Washington a new demurrage ruling cancelling that which was scheduled to become effective January 21, and which provided for the elimination of the "bunching clause" in the old rule. It is expected that the new ruling will become effective within the next few days, and it is pointed out that the bunching clause is restored so far as nearby shippers are concerned, but that it will still operate against the man who puts a lot of cars in shipment and has long hauls from producing points. The association appealed for restoration of the bunching clause and this was granted following a letter written by J. H. Townshend, secretary-manager, to Thetus W. Sims, chairman of the house committee on interstate commerce, which the latter turned over to Director-General McAdoo.

The embargo situation is described as slightly worse by F. B. Larson, assistant secretary of the association, who has charge of this particular feature. He says that the only points which can be reached in Eastern Trunk Line territory are those on the Delaware, Lackawanna & Western and on the New York Central lines west of Syracuse, though lumber for export or for the government may be shipped through Greater New York if a permit is obtained from the authorities in control of traffic regulations for the eastern seaboard. The only points which can be reached in Central Freight Association territory are some in Indiana and Illinois, those in Michigan served by the Wabash and a few in Ohio on the Big Four, the Lake Erie & Western and one or two other roads.

The association has shown an increase of eight new members since the annual held here January 15, bringing the total to 159. Mr. Townshend says that this organization aims at an increase of more than fifty members during the year. Its members already ship more than 250,000 cars of lumber and forest products annually. The new members are: Maley & Wertz, Evansville, Ind.; Hemphill Lumber Company, Kennett, Mo.; Bradley Lumber Company, Greenwood, Miss.; Perkins Brothers, Kelso, Ark.; H. W. Darby Hardwood Lumber Company, Grenada, Miss.; Jefferson Lumber Company, Allport, Ark.; G. W. Allport, Allport, Ark., and Atlas Lumber Company, Cincinnati.

Mr. Townshend says that the southern and southwestern carriers will, he is informed, petition the Interstate Commerce Commission for an advance of approximately 2 cents per hundred pounds of hardwood lumber shipments from all points in southern, southwestern and southeastern territory to destinations in eastern trunk line territory. He also says that it is rumored that the Canadian roads will shortly demand the full Ohio river combination which will, if granted, mean an advance of 5 cents per hundred pounds on lumber shipments from southern producing points, bringing the Memphis-Toronto rate from 26 to 31 cents.

Ostrich Leather for Furniture

Experiments are being made with leather from tanned ostrich skins, and it is recommended for leather upholstering of furniture. It is said to be very handsome and can be prepared in artistic colors, particularly in greens and browns. Since ostrich feathers went out of style, the ostrich farms of South Africa have been unprofitable, and it is to find other markets, to take the place of feathers, that the skins of the birds are being tanned. Markets are likewise being sought for the eggs in England. They sell in local markets in Africa at from \$1.68 to \$2.16 a dozen. A dozen ostrich eggs are equal in bulk to twenty-five dozen hen eggs. An ostrich skin is more than twice as large as a sheep skin.

Lumber Exporters' Annual

The annual meeting of the National Lumber Exporters' Association, the eighteenth in the history of the organization, which was held at the Hotel Martinique, New York, January 23 and 24, is generally regarded as the most important in its history, not only in point of attendance, but with regard to the deep interest manifested in the proceedings. Notwithstanding the present serious inconveniences of travel, almost every section of the country was represented, members coming from as far west as Kansas City, Mo., and as far south as New Orleans and Texas. The western delegation was twenty-nine hours late, but had anticipated long delay on the road and arrived in time to take part in the first sessions.

Although the deliberations were confined to the lumber export trade, other questions being only incidentally touched upon and no formal action was taken on any of the problems that do not lie entirely within the scope of the foreign lumber trade, the sessions proved of great importance. The meeting was called to order by Vice-President W. J. Eckman of Cincinnati, who has been acting president since the death of George D. Burgess last summer. Im-

mediately after the gathering had come to order, a motion was unanimously adopted suspending the regular procedure to act upon a resolution of sorrow and regret on the death of Mr. Burgess, which had been prepared by a special committee appointed at the time of his demise.

freight rates today would not be nearly so high as they are. He especially emphasized the necessity of having American ships to carry American forest products, and called attention to the statement of the shipping board that the United States would have nearly 9,000,000 tons of shipping at the close of 1918. Mr. Eckman touched on industrial co-operation and co-operation in the export trade, and suggested that in order for the exporters to meet competition after peace was declared, complete industrial co-operation would be required.

The remainder of the morning session was taken up with the reading of the secretary's annual report, the annual report of the foreign representative, Frank Tiffany of London, the statements of the treasurer, and the reports of standing and special committees. The statements of Secretary Dickson and Mr. Tiffany, proved to be of special interest. They went much into details on numerous matters concerning individual members of the association, and set forth what had been done to insure the movement of shipments, the adjustment of claims and the removal of difficulties con-

FRANK FEE, DERMOTT, ARK.,
PRESIDENT

H. M. DICKSON, BALTIMORE, MD.,
SECRETARY

JOHN L. ALCOCK, BALTIMORE,
TREASURER

Acting President Eckman then delivered his annual address, which was exceptionally comprehensive and went into many of the questions that have been occupying the attention of the exporters. He referred not only to matters of importance to the National Lumber Exporters' Association, but also to subjects of consequence to the entire country as well. He made reference to the Webb bill, which permits combinations in the export trade; to government control of railways and to river improvements as a means of facilitating the movement of traffic and keeping down the freight rates. He devoted considerable time to the merchant marine and to the progress being made by the United States Shipping Board in its effort to again establish a merchant marine, and in this connection referred to the American people as a nation of ducks, whose future lies upon the water. He stated that nearly ninety per cent of our foreign commerce was carried in ships of other nationalities prior to the war, and he further expressed the opinion that had America years ago established a merchant marine, ocean

fronting the exporters at almost every turn. The afternoon session was devoted to a consideration and discussion of the reports of the secretary, the foreign representatives and of the various committees, and this exchange of views brought out much information of value to the members of the association.

ELECTION OF OFFICERS.

The session on Thursday morning was also consumed in discussions of subjects related solely to the export trade and to conditions prevailing at this time, while the chief business of the afternoon session was the election of officers for the ensuing year, with the following result:

PRESIDENT—Frank F. Fee, Fee-Crayton Hardwood Lumber Company, Dermott, Ark.

FIRST VICE-PRESIDENT—R. S. Huddleston, Huddleston Marsh Mahogany Company, New York and Chicago.

SECOND VICE-PRESIDENT—Gustav A. Farber, Russe & Burgess, Inc., Memphis and London, England.

SECRETARY AND TRAFFIC MANAGER—Harvey M. Dickson, Baltimore.

TREASURER—John L. Alcock, John L. Alcock & Co., Baltimore.

BOARD OF DIRECTORS—Chester F. Korn, Korn-Conkling Company, Cincinnati, O.; Edward Barber, Howard & Barber Lumber Company, Cincinnati; W. J. Eckman, M. B. Farrin Lumber Company, Cincinnati; Inez Crichton, W. M. Ritter Lumber Company, Columbus, O., and London, England, and Harry C. Fowler, Case-Fowler Lumber Company, Macon, Ga.

A discussion on the subject of government control of public utilities and the possible effect of prevailing tendencies toward such control was opened by Mr. Aleock, who took the ground that while the government was able to manage some things effectively, too much paternalism was not good, tending to the narrowing of opportunities for private initiative. Mr. Aleock maintained that persons who had devoted their lives to the conduct of enterprises necessarily knew more about them and were able to conduct them better than government officials, who had not been brought up in the business, and that commercial business could be conducted more efficiently as private undertakings, by reason of the competent organizations maintained. Others expressed similar views.

W. H. Russe of Russe & Burgess, Inc., took up certain clauses which were being inserted in ocean bills of lading by some of the steamship companies and pointed out that these clauses were calculated to bring about a nullification of the provisions of the Harter act. Some of these clauses provided that the laws of the country under the flag of which a vessel sailed, applied also to the ship. This, he said, would afford a means of disclaiming liability for damage to shipments, a condition which the Harter act was expressly passed to prevent. He called attention to the fact that the federal courts had upheld the validity of the act and emphasized the protection afforded by the statute.

No formal action was taken on either subject, however, though it is altogether likely that the board of managers will pursue such a course as circumstances may call for.

Immediately after adjournment of the general meeting, the board of managers, which includes the officers of the association and the directors, met to transact routine business.

The New York members and the lumber trade generally were lavish in their hospitality and made the stay of the visitors highly agreeable. The New York members on Wednesday evening gave a complimentary dinner to the visiting members, the local committee being headed by R. S. Huddleston, C. S. Powell and Andrew Knox. Among the invited guests were Captain Noye of the French High Commission, representatives of the British Ministry of Shipping

and representatives of the leading steamship lines. Mr. Eckman presided and Mr. Huddleston acted as toastmaster with great skill. At the conclusion of the feast the entire company sang "America."

On Thursday night at the Hotel Martinique, the new president, Mr. Fee, was host at a dinner, to which a number of army officers were also asked.

The time and place for the next annual meeting are to be selected later by the board of managers.

That the value of the association as an important factor in the export trade is being recognized more and more is strikingly shown by the fact that in spite of the adverse conditions which prevailed during the last year, five prominent concerns were added to the membership. The five are: Central Export Company, New York; Bennett Lumber Company, Ltd., Montreal and New York; Astoria Veneer Mills and Dock Company, Long Island City, N. Y.; George C. Brown & Co., Memphis, Tenn., and the Menzies-Hale Lumber Company, Cincinnati.

Mr. Fee, the new president, and Mr. Du Bose of the Lamb-Fish Lumber Company, of Charleston, went to Baltimore after the meeting and saw Mr. Dickson there again. They subsequently went to Washington to take up various matters with government officials.

Frank Fee's Dinner

The executive committee of the association met after the meeting and President Fee announced that he would be host at a little dinner in the evening. It was an impromptu affair intended for informal discussion and jollification. When the guests started toward the dining room of the Martinique, a number of friends, including Will Russe of Memphis, joined them. Russe made a proposition that was quite welcome to all, but, before the executive committee knew it, all the soldier boys in the hotel lobby were invited to join the party, and everybody in the hotel took on the spirit, and the first thing they knew Gus Williams, who was entertaining downstairs, and the lady entertainers joined the party, and the entertainment of the soldier boys and the regular entertainers was giving pleasure to everybody in the hotel. It is the impromptu affairs of life that make a lot of folks happy, and this was one of the occasions.

Southwestern Hardwood Men Meet

On January 30 the Southwestern Hardwood Manufacturers' Club held a meeting at Hotel Bentley, Alexandria, La. A number of topics came up for discussion, and the two sessions were fully occupied in that way. The meeting held in the forenoon was informal for the reason that late trains delayed the arrival of so many of the members that the attendance was small at the opening session.

The proposed plan for reporting sales came up for discussion, and it was pointed out that such a plan would do away with the wide discrepancies in quotations, and benefit would result from it. A number of questions as to the working of the plan came up, and called for opinions and discussions. One such question was whether the names of customers should be given along with the quotations, and whether the reports should distinguish between sales to wholesalers and sales to consumers. The value of local reports, in connection with the market reports, was emphasized.

THE GOVERNMENT'S CALL FOR OAK

The fact that a large amount of oak was needed in the manufacture of vehicles for the government was brought before the meeting by Ferd Brenner. The manufacturers who were to turn out the vehicles had been dickering with hardwood manufacturers in Chicago and elsewhere. The hardwood men in Chicago were not in a position to quote prices, with the information available.

It was the original design to get dimension stock, but that was impossible, and they were trying to get planks. The mills near Alexandria were represented by R. C. Witbeck of the Ferd Brenner Lumber Company, and A. S. Johnson of the Mansfield Hardwood Lumber Company, and they wanted to know how much thick green white

and red oak the members could furnish in the next six months. In further discussion of the subject the understanding was expressed by several members that the vehicle people were unwilling to state the price at which they had figured the lumber in taking their contracts from the government, and that they were trying to procure it at prices much below those at which they had taken it into their estimates. It appeared that several members had received inquiries for the stock accompanied by patriotic appeals for favorable prices on account of the government; and it was thought that on account of the difficulty of procuring it the vehicle manufacturers were ready to state the figures on which they had based their bids and make a price to the lumbermen accordingly. With the lumbermen's representatives and Mr. Pritchard present, it was thought a satisfactory price basis could be arrived at. It was also developed that the vehicle manufacturers had been offering lower prices for the stock than they had been paying.

Prices were discussed at considerable length and it was the sense of those present that they would be willing to accept whatever prices might be fixed by the Emergency Bureau; and those present were asked what quantities they were prepared to furnish. The following reply was formulated and was sent to Mr. Johnson and Mr. Witbeck, Chicago:

The membership of this club obligate themselves to furnish during the period of six months a minimum of 10,000,000 feet No. 1 common and better; or 15,000,000 feet No. 2 common and better, thick oak, for green shipment, for government purposes, at prices that may be agreed upon by the Hardwood Emergency Bureau. Probably additional from non-member mills.

THE SHIPPING SITUATION

The shipping situation came up for discussion, and it was shown that the ports on the gulf were not as busy as they might be, in view of the congestion of eastern ports. It was stated that shipments were being made from the gulf for government account, but they were going from Port Arthur, rates to which were higher than to Galveston. The reason probably was that they were taking fuel oil at Port Arthur; but in the meantime the wharves at Galveston were idle, and there were 600,000 tons of coal there for which there was no use, with large amounts of goods in warehouses and the elevators full of grain. Mr. Deutsch thought some steps should be taken to secure more shipping through gulf ports, especially with vessels burning oil; practically all the fuel oil is produced west of the river.

The meeting again got back to a discussion of the matter of reporting sales, and the debate turned upon the plan by which the work should be done, whether members should report their sales weekly with the average price, or report the individual orders. While no definite conclusion was reached, the consensus of opinion apparently was that the latter was more satisfactory and convenient. As to whether the reports should show names of customers, it was stated that the Manufacturers' Association had left off the name when it was a consumer, and more recently had left off the name when a wholesaler. J. M. Thompson thought it might be necessary for the member to report the name of the customer, and in this connection explanation was made by Mr. Palmer of the necessity recognized in the pine exchanges of either having the name actually reported or having the sale so identified in the report that in case of inquiry by the Federal Trade Commission as to whether facts were being adhered to the name of the customer could be procured and the correctness of the report verified. It was also discussed whether the reports should be compiled by a central office or the members should simply exchange reports with each other, it being generally thought the former was the only practicable plan.

In the afternoon meeting, which was the first formal session, Secretary A. O. Davis reported upon recent events of special concern to the club, particularly the five-day closing order and its apparent effect upon business. New needs for hardwood are coming up all the time and business is stimulated thereby. Interior finish factories have not been doing so well as some other branches of the industry; but the call for interior trim for ships is expected to improve the situation.

The secretary's report went somewhat fully into the railroad situation as it has been affected by the appointment of a director-general. The outlook was not viewed as altogether promising for the reason that for the next six months many things will be tried experimentally. The secretary said Mr. McDoo appointed six men as a board of control, all railroad representatives who had been strongly opposed to government control of railroads. Shippers ought to be represented on the board.

He also referred to the fact that the hardwood men in this territory had not received any business to speak of from the Hardwood Emergency Bureau, which Mr. Pritchard explained was because the orders received had been for delivery at eastern ports, on the cheapest freight rate, which shut out the southwestern manufacturers. As an offset it was proposed that the gulf ports be opened to shipments of lumber and other supplies, which would relieve congestion in the east. He described the delays incident to getting shipments through the eastern ports, and said movement could be greatly expedited by shipping through the gulf.

The secretary expressed the opinion that members of the club would be able to secure a better share of the government orders if they had a representative in Washington to keep them advised of the business coming out, especially of contracts awarded for which the contractors were to buy the material. The suggestion was discussed at considerable length, it being suggested that it would conflict with the Hardwood Emergency Bureau, but Mr. Johnson, who had recently been in Washington, thought it could work in harmony with Mr. Pritchard, who he thought would be glad to have the assistance of a representative of the club and to give him desk room in his office. The question arose whether a man should be kept in Washington permanently, or whether various members should take turns in going there, such men to be

furnished by their companies and their expenses paid by the club. It was finally decided that the latter was preferable for the time being at least, and the discussion ended in the determination to try it for sixty days, having four men take their turn in Washington for four weeks each, each member to contribute \$50 for expenses.

The plan for compiling and publishing daily reports was adopted, and the details were left in the hands of President Deutsch to be worked out.

The following members of the club were in attendance at the meeting:

Albert Deutsch, Sabine River Lumber & Logging Company, San Antonio.
A. O. Davis, Sabine River Company, Beaumont.
Geo. W. Cleveland, Jr., South Texas Lumber Company, Houston.
H. B. Johnson, Mansfield Hardwood Lumber Company, Winnfield, La.
J. A. Texada, Jr., Boyce Lumber & Realty Company, Boyce, La.
S. R. Cecil, Holly Ridge Lumber Company, Meeker, La.
Geo. B. Wilson, Bomer-Blanks Lumber Company, Blanks, La.
Ferd Brenner, Ferd Brenner Lumber Company, Alexandria.
H. J. Brenner, Ferd Brenner Lumber Company, Alexandria.
G. V. Patterson, Alexandria Cooperage & Lumber Company, Alexandria.
J. M. Thompson, Newell Lumber Company, Eunice, La.
Roy Burkholder, S. Burkholder Lumber Company, Homer, La.
W. D. Brewer, Brewer-Nienstedt Lumber Company, Miltonberg, La.
C. H. Clark, Purdy-Hess Lumber Company, Belledau, La.
C. A. Weis, Alexandria Cooperage & Lumber Company, Alexandria.
E. L. Borum, United States Shipping Board, Alexandria.

Looking Ahead

An old grove of ash trees in England is being cut for airplane stock and the wood is of excellent quality. The point, however, is that two ash trees are being planted for every one that is cut, and the object is to provide airplane stock for some future war, perhaps a century hence. That is a long look ahead, and no doubt many persons believe that the wood will never be needed for war purposes. If not needed, so much the better; but if it shall be needed, England will have it. This is not the first instance in England of planting trees to provide for future trouble. At the close of the Napoleonic wars, England was bare of certain kinds of wood used for war material. Among such was alder, which at that time was the best for making gunpowder. Large areas were then planted in this wood. This alder seems not to have been particularly mentioned of late, but it is a safe guess that it has already done its duty in the present war after having been converted into charcoal and then into powder.

The Cedars of Lebanon

If the British army in Palestine continues to advance it will shortly occupy Lebanon, where the famous cedars grow. This belt of timber has a sentimental value on account of ancient associations; but so far as money value is concerned, it is not there. Recent surveys or examination of the areas show no good timber and not much of any kind. What is there belongs, or recently belonged, to the head of a religious association, probably a bishop of the Greek orthodox church, but under the political control of Turkey. Estimates of the quantity of cedar of Lebanon to be found are not definite, but the description indicates that all told the amount would fall short of 100,000 feet. The statement has been often made that the cedars are all old and that no young trees are to be found. The fact is, plenty of young cedars sprout every year, but goats eat them so closely that none escape unless they are given protection. Where stone walls exclude the goats, seedlings come up and grow well. If the British capture and hold the region, it is probable that some sort of forest protection will be afforded; but no one should expect Lebanon to become a forested region in the modern sense of the word. Lebanon is drained, in part, by the head streams of the river Jordan, and lies approximately one hundred miles north of Jerusalem and inland fifteen or twenty miles from the Mediterranean sea. There are historical records that lumber operations were carried on there more than 5,000 years ago and some of the cedar cut in very remote times is still in existence and may be seen in the Field museum, Chicago. That was 2,000 years before Solomon's time.

Modern Hardwood Operation

Riel-Kadel Lumber Company, Memphis, Tenn., White Ash Specialists

The Riel-Kadel Lumber Company, at Memphis, Tenn., specializes in white ash lumber and by concentrating on this material, and by studying every phase and feature of the market and the sources of supply, a strong position has been secured.

This is one of the few concerns in this country that specializes in white ash lumber. Most hardwood operations handle some ash which comes to them in course of business, but special facilities are required before success can be attained, on a large scale, in handling this wood exclusively.

The Riel-Kadel Lumber Company's main office and selling office are located at Florida street and Speedway, Memphis, and it has been operating at that location since 1914. It has no mill or mills outside of Memphis, but its operations reach out far enough on all sides to secure a lot of as fine ash as is to be found anywhere. It is not an easy matter to secure large bodies of ash timber. It does not grow in dense stands, like pine or cypress, but is to be sought in small groups of trees, or more usually scattered singly through forests of other hardwoods. Though it would not be practicable to buy large tracts of various kinds of woods, merely to get the ash that grows in the mixture, yet the Riel-Kadel Lumber Company purchases large quantities of ash stumpage in a hundred localities within reach of Memphis, but scattered over most parts of the southern hardwood field.

The company prefers to bring the logs to the Memphis mill, where the sawing is done by experts and the lumber is assorted, graded and seasoned in the best possible manner. But it is not always practicable to transport the logs such long distances, particularly when the transportation facilities may not be all that could be desired. When logging equipment is not available, the company has the logs sawed at various points and the lumber is

brought green to the Memphis plant, where it is sorted and assembled, each grade and thickness separately. A specialty is made of piling the lengths and widths best adapted to the consumers' requirements.

For example, some of the trade requires stock 3 to 5 inches wide in clear strips; some 6 to 8 inches wide; others 6 to 10, and some 10 to 12 inches or wider. If only a limited amount of stock were assembled at a place it would not be practicable to pile it to meet the requirements of customers, but it is easy to do so when large quantities are assembled. From this fact, it is apparent how great is the advantage of bringing together at one place the run of many small mills, so that it can be sorted and piled, ready for shipment to meet the requirements of customers.

The demand for ash is now very heavy and the supply is limited. The airplane has brought a new demand, and it is an exacting demand. The ordinary first and second stock does not contain more than ten per cent material that the airplane manufacturer can use. Recently a buyer of such stock sorted 3,250,000 feet of ash and secured only 300,000 that was acceptable.

The president of the Riel-Kadel Lumber Company is J. Thompson, and Herman Katz is vice-president.

Mr. Thompson was for five years vice-president of the Dudley Lumber Company of Memphis, Tenn. That company handled a large amount of white ash. Prior to his connection with the Dudley company he was connected with the E. Sondheimer Company. He started with that company as office boy in 1901 in Chicago, where the company was then located. In 1905 the company moved from Chicago to Memphis, and Mr. Thompson accompanied his employers to their new location. He remained with this company, filling various positions, by promotions from place to

A FEW PILES OF ASH SELECTED FOR AEROPLANE STOCK, ON OUR SOUTHWEST LOADING DOCK

INTERIOR VIEW OF PRIVATE OFFICE. NOTE OLD ENGLISH FIREPLACE AND MANTEL WHICH IS MADE OF 3" ASH
LEFT TO RIGHT: MOSES KATZ; HERMAN KATZ, VICE PRES.; JOE THOMPSON, PRESIDENT

place, until he made the connection with the Dudley company.

It is interesting to note that Herman Katz, now vice-president of the Riel-Kadel Lumber Company, began his career with the E. Southbemer company, of which his uncle was at that time vice-president. Mr. Katz's official title at that time was "assistant office boy to Mr. Thompson." It was at that time when they were earning a salary of five dollars a week from the company that employed them, that they began to plan how some day they would go into the lumber business for themselves and build up a big institution like the one which was then giving them employment. The years which have passed since then, though the time has not been very long, have sufficed to witness the realization of the plans which the office boy and his assistant worked out at that time; and the experience seems to prove that two things are necessary to the successful fruition of a plan: first, it must be reasonable, and second, it must be developed in a practical way.

Personal energy, foresight and perseverance have a great deal to do with success in any enterprise, but there is often a great deal depending upon location and geography. The situation of the Riel-Kadel Lumber Company at Memphis, Tenn., was a piece of fortunate foresight. It is a center that attracts business because of its advantages. This is particularly true in regard to white ash in which this company specializes. The supply is in reach and it is of the highest quality. Memphis is the natural center for that business. White ash attains its greatest perfection in the states tributary to that city. One-half of the whole supply of ash lumber in the United States is cut in Tennessee, Kentucky, Arkansas, Mississippi and Alabama, and the natural gathering point is Memphis.

These were some of the advantages which the Riel-Kadel Lumber Company foresaw and took advantage of in planning and building up its business.

The photographs illustrating this story were taken especially for **HARDWOOD RECORD**. In illustrating a business such as that of Riel-Kadel it must be remembered that in specializing in ash impressive quantities are not attained such as exist in the general trade. If though an attempt is made to form a mental comparison between these solid alleys of ash and

the stocks of ash commonly found in the southern yard a more comprehensive idea of the magnitude of Riel-Kadel's ash business may be realized.

A Bottle Neck to Be Uncorked

With freight rates at present in New York, for the purpose of storage has become almost impossible, owing to the scarcity of boats. One operator said the other day he paid \$50.00 for an hour and a half run, and was glad to do it. Demurrage at five dollars a day would soon pay the bill, and inasmuch as the material had to be put on board the ship which would sail in a few days, it meant action to get the lighterage, regardless of price. The result is that everything about the port of New York is on a high basis. Looking at the docks now one wonders what has become of all the boats that formerly were tied up some times two or three deep. The situation should surely impress upon the government that it is necessary to open up the Southern ports for the delivery of munitions and food stuffs for Europe. That would not only relieve the bottle-neck at New York, but it would distribute the cars so that Southern manufacturers could get shipments North, and it would also greatly accelerate the movement of cars and boats. It is to be earnestly hoped the government's consideration of the subject will be taken in earnest, and that New Orleans and Mobile and Pensacola and Savannah and Galveston and other Southern ports will be utilized. Pressure to this end is already being started by Southern shippers.

West Virginia Mill Fire

The Warn Lumber Corporation at Raywood, W. Va., lost its store and office by fire recently. The loss was partially covered by insurance. The company is rebuilding at once on the foundations of the old building and in the meantime is occupying temporary quarters.

National Meeting Date Set

It has been decided that the twenty-first convention of the National Hardwood Lumber Association will be held on Thursday and Friday, June 20 and 21. There has been some delay in naming the date as a deluge of conventions made quarters uncertain. The convention headquarters this year will be at the Congress hotel.

PART OF ALLEY LOOKING EAST TO LOADING DOCK AND MILL

LOADING OF WHITE ASH ON RIEL-KADEL LUMBER COMPANY'S EAST LOADING DOCK

The Mail Bag

B 1171—Wants to Buy Logging Wheels

Gladstone, Mich., February 1.—Editor HARDWOOD RECORD: We can use three pairs of big wheels for logging, prefer ten foot wheels. Have you anyone who has these in good condition who wishes to sell same?

B 1172—Boxwood Dimension Stock

New Bedford, Mass., February 6, 1918.—Editor HARDWOOD RECORD: Can you refer us to any dealer carrying or handling boxwood dimension stock of sizes around 14"x1 3/4"x1 3/4"?

Anyone interested will be given the name of the inquirer upon request.—EDITOR.

B 1173—Wants to Buy Squares

Ft. Atkinson, Wis., February 8.—Editor HARDWOOD RECORD: We are in the market for 1 or 2 cars of gumwood which can be cut in 1 1/2" squares, 14" long, or lumber that will cut into this size. These squares, however, will have to be practically free from knots and checks that cannot be turned out.

Would also like prices on quarter-inch veneers and strips 4" wide or thereabouts, random lengths from 8 to 10" up.

Would also be interested in prices on 2" and 2 1/2" ash squares, in lengths up to 30 or 32". Also 2 1/2" squares 12" long.

B 1174—Wants Information on Willow Markets

Cincinnati, O., February 8.—Editor HARDWOOD RECORD: Have you any information relative to willow and its application? We are considering purchasing a tract of timberland on which there is a considerable amount of willow. We understand that there is quite a large demand for 8/4 and 16/4 to be used in connection with the manufacture of artificial limbs, but in the manufacture of this stock a large percentage of 4/4 develops, and we would be pleased to have you advise where we could find a market for this class of stock.

The willow market has developed with considerable rapidity in the last couple of years. It is true that willow found its first large use in the manufacture of artificial limbs, but it is equally true that the other uses to which it has been put have outgrown this.

Willow is exceptionally good box wood, and is used very largely in the East in mouldings where basswood normally serves. Willow has a great many qualities to recommend it and is undoubtedly destined for much larger use than it enjoys at present. It is soft, easily worked, has a good, even, light color.—EDITOR.

B 1175—Ebonized Wood Sought

New Albany, Ind., February 8.—Editor HARDWOOD RECORD: We have a call for some ebonized wood. We have heard of ebonized maple, ebonized applewood, etc. We would prefer the maple, as long strips are wanted.

If you can put us in touch with someone handling such material, you will very much oblige.

Several processes for doing this work are in use. The simplest is to dye the wood with hatters' dye; another is to immerse it forty-eight hours in a warm solution of alum and sprinkle it several times with a decoction of logwood. Holly and pearwood are excellent for this purpose, but oak may be employed, and maple ought to respond well to the treatment.

We happen to know that the Brunswick-Balke-Collender Company, Chicago, uses much of it.—EDITOR.

Clubs and Associations

Will Hold Local Concatenation on February 12

J. C. Quixley, Hoo-Hoo vice-gereent of the northern district of Illinois, states that there will be a concatenation at the Sherman House, Chicago, on February 12. This will give opportunity of combining this concatenation with celebration of the Illinois Lumber & Builders Supply Dealers' Association annual to convene at the same place.

War Excess Profit Tax

The National Lumber Manufacturers' Association has distributed among its members a pamphlet of 45 pages explaining some of the disputed points in the war excess profit tax law as it may affect the lumber business. The law was enacted by Congress Oct. 3, 1917.

Choose Officers for Chicago Association

It is a custom in the Lumbermen's Association of Chicago for the board of directors to elect officers annually. The new board chosen at the meeting two weeks ago met on January 25 and chose officers for 1918 as follows:

PRESIDENT—A. C. Quixley, chairman Division A, Hardwood Wholesalers.
VICE-PRESIDENT—C. B. Flinn.
TREASURER—Geo. D. Griffith.
SECRETARY—E. E. Hooper.

Mr. Quixley has been an active member of the Chicago lumber trade since his original association with the local lumber fraternity. Mr. Flinn is one of the oldest members in active participation in local lumber circles, while Mr. Griffith is one of the best known lumbermen in the Chicago market. Secretary Hooper has been secretary of the association for so long that it is difficult to think back to the time when he did not hold that office.

Mr. Quixley is the youngest man who has ever headed the Chicago association. He is thirty-six years old, but his experience and his ability have long since given him a substantial prestige. He headed the Lumbermen's Club of Chicago in 1914, and is now also Vicegerent of the northern district of Illinois for the Hoo-Hoo. Mr. Quixley started in the lumber business eighteen years ago at Beloit, Wis. He subsequently represented the Mason-Donaldson Lumber Company as salesman in the Chicago territory, and following that managed the Chicago yard of the Brittingham & Young Co. He formed the Quixley & Bulgrin Lumber Company seven years ago, associating with G. H. Bulgrin. The firm name has since been changed to the Quixley Lumber Company, Mr. Bulgrin having retired from the partnership.

A. C. QUIXLEY, PRESIDENT

E. E. HOOPER, SECRETARY

GEO. D. GRIFFITH, TREASURER

No Co-operative Purchases of Thick Oak

There has been much talk regarding orders for thick oak to be used in the manufacture of wagons, and there have been at least two conferences in Chicago between manufacturers accepting abnormally large contracts for wagons from the government and representatives of the hardwood lumber industry, including the Southern Hardwood Emergency Bureau at Washington. James E. Stark, Joe. W. McClure, R. L. Jurden and other members of the trade attended these conferences, but on February 2 John W. McClure, immediately after the meeting of the Lumbermen's Club, made a detailed statement to the Memphis lumbermen in which he made it clear that, whenever there were enormous quantities of thick oak to be bought, the entire transaction was one between the individual wagon contractor and the individual manufacturer of lumber, as all efforts to work out a practical basis of co-operation had come to naught. Lumber interests have been primed for some time to expect big orders for hardwood lumber to be used in the filling of government contracts for wagons, wheels, boxes, handles aeroplanes and other essentials, and they are not at all surprised that such an order for wagon stock is to be placed. They will keep an eye on the situation and will do what they can to secure part of the business both because it promises to be profitable and because it enables them to continue their policy of helping the government whether directly or indirectly.

Executive Committee of New Hardwood Association Meets

The first meeting of the executive committee of the American Hardwood Manufacturers' Association to be held since the latter was launched at Memphis, Friday, January 18, was called to order at the Tennessee Club February 4 by R. L. Jurden, president of the association and ex-officio chairman of this committee. Others present were: W. H. Russe, James E. Stark and J. W. McClure, all of Memphis; R. M. Carrier, Sardis, Miss.; E. A. Lang, Chicago, and M. B. Cooper, Memphis.

The principal action of the committee was in the fixing of the rate of assessment for the purpose of carrying on the general work of the association, not to exceed three cents per 1,000 feet on the number of feet of hardwood logs cut during the preceding year, and in the election of J. T. Kendall, formerly secretary of the American Oak Manufacturers' Association, as first assistant secretary to John M. Pritchard, and C. A. Van Camp, formerly assistant to Mr. Pritchard, as second assistant secretary.

It was announced that rates of assessment to be levied for carrying on special department work will be fixed by the governing committee in charge of each special wood.

John M. Pritchard, secretary-manager, was granted leave of absence to continue his duties as manager of the Southern Hardwood Emergency Bureau at Washington, and the ranking position held by Mr. Kendall places him in active charge of the affairs of the association until such time as Mr. Pritchard returns permanently to Memphis.

The different standing committees will be announced in a few days, and it will also be decided shortly what offices will be used by the new association.

Trade Helps by Northern Association

A novel plan has been adopted by the secretary's office of the Northern Hemlock and Hardwood Manufacturers' Association for bringing about greater co-operation between the manufacturer and retailer of lumber products in reaching the consumer. Large packages are being sent out to the manufacturers containing an assortment of building plans, building booklets on silos, garages, farm buildings, birch books, maple flooring booklets and other material of value to the retail lumber dealer. Some of the dealers are framing these building plans and also putting the booklets in a glass frame so that all of these together make an attractive exhibit in the waiting room, where the study of the plans induces the desire to build and shows a part of the service the manufacturer gives. At the request of the retailer the association sends any of these publications or plans direct to the customer with the retailer's compliments and when desired the name of the retailer is printed upon the reading matter. Suggestions are likewise issued with the printed material showing how an intensive campaign for disposing of lumber can be carried on by co-operation between executives, sales managers, salesmen, sales agents and retail customers. The entire campaign was entered into with every confidence that it is well worth the investment in view of the success met in the exploitation of the association's hemlock stave silo. Inquiries are now coming in for material on the silo not only from retailers, who distribute it among the farmers, but direct from the farmers, whose letters show that they have fully decided in favor of the wooden silo and their inquiry is merely for advice on minor matters in connection with the construction phases.

Memphis Club Still Grows

Six new members were elected to the Lumbermen's Club of Memphis at the regular semi-monthly meeting of this organization at the Hotel Gayoso February 2, bringing the total to 185. Furthermore, applications for membership were filed by four other lumbermen, and, when they are elected two weeks hence, the total membership will be 189. Those elected this afternoon are:

E. J. Schlosser, Forest City Box Company, Forest City, Ark.; Edwin B. Snyder, Penrod, Jurden & McCowen, Inc., Memphis; John Churchill, Churchill, Milton Company, Greenwood, Miss.; B. J. Davis, General Lum-

ber Company, Memphis; K. L. Emmons, Memphis Band Mill Company, Memphis, and Harry Darnell, R. J. Darnell, Inc., Memphis.

S. B. Anderson, chairman of the special committee appointed some time ago to take steps looking to the better protection of employes of lumber firms with a view to preventing negro laborers from becoming dissatisfied and removing from Memphis, reported that he and his associates had succeeded in securing a promise from the sheriff of this (Shelby) county that his deputies would not be allowed to prey on the negroes employed at the saw mill plants and yards in Memphis, even if he had to fire them to prevent such raids as have been pulled off heretofore.

Mr. Anderson thought, however, that the question of establishing stores in North and South Memphis, where the negroes could buy their supplies at cost, should not be decided at this time. He argued rather in favor of waiting to see how the Kelsey Wheel Company in North Memphis and Larkin & Co. in New South Memphis came out with the stores they had established for the purpose of supplying their employes with goods at cost. In the meantime, he recommended that lumbermen secure coupon books from one of the big system of stores in Memphis and that they supply these to their employes when the latter have run out of cash and have to buy supplies. He said investigation had disclosed that these coupon books were available and that the management of the chain stores in question sold on a very close margin, thus affording ample protection. Mr. Anderson strongly advocated that the lumbermen fall into line in this movement, saying that it was necessary to do something to protect their employes from loan sharks and from stores charging unreasonable profits if they wished to prevent their labor from being scattered, and if they wished to avoid the alternative of paying higher wages to offset the high prices employes are having to pay under present conditions.

J. D. Allen reported for the house committee and showed that the employment bureau of the club had found work for twenty-seven persons with lumber firms during the single month of January.

Mr. Allen recommended that the assistant secretary, Miss Florence Corrington, be given a salary of \$75 per month because of her increased duties. The club, however, went him one better and gave her a salary of \$100 per month because of her very great efficiency and because of her proven value to the club. She has charge of the employment bureau as well as the rooms of the club in the Chamber of Commerce building.

In connection with these rooms, Mr. Allen reported that the committee figured that the assets of the club, in the way of furniture and fixtures, amounted to approximately \$1,200.

R. E. Dickinson, chairman of the river and rail committee, said that he and associates had taken up with Col. E. H. Egan, superintendent of the Yazoo & Mississippi Valley railroad, the question of continuing cross-town handling of lumber and forest products, and suggested that the members go ahead with the use of equipment for such handling with as great efficiency as possible without entering into any controversy with that official at this time. He thought it sufficient that cars were available for this service and that the latter had not been eliminated. The club adopted strong resolutions at the last meeting to be presented to Col. Egan, but the committee thought the time inopportune for formal action.

Mr. Dickinson also informed members of the club that the Illinois Central had withdrawn all through bills of lading on export shipments routed over its lines and that export shipments of lumber had to be handled, if at all, on the basis of local bills. He did not think this made much difference at the moment, but that it was a matter which needed careful watching because a time would come when there would be a great deal more export traffic offering than now.

He also reported that the committee in charge of river and rail terminal at Memphis to facilitate the handling of river traffic was seeking a location for these terminals, but he did not approve the plans of the committee because they did not make such provision for carload freight as would develop river transportation on the scale contemplated. F. E. Stonebraker, representing the club on this committee, said that the latter was contemplating an entirely new location and that, if this were decided upon, it would greatly delay construction of these terminals at a time when they should be available for use as soon as possible. He pointed out that New Orleans has completed its terminals and that St. Louis had made large progress, while Memphis had done practically nothing to increase freight handling facilities on the Mississippi.

C. R. Ransom, chairman of the special committee appointed to sell Thrift Stamps among employes of lumber firms in this county, said he had chosen a number of able lumbermen to assist him, and that he felt sure that the lumber industry would soon be organized on an effective basis for handling this proposition. He had not the slightest doubt that the lumbermen of Memphis would bring up their end of this proposition just as they had done on all other patriotic questions. He urged, however, that lumber firms sign applications to become agents for the distribution of these stamps among their employes and that they buy \$50 to \$100 worth of the stamps and keep a number of them on hand to distribute among their workmen. He said the weather had kept many employes idle, but that he hoped, with better weather and larger earning power, the negroes and other employes would fall in line and buy these stamps freely.

George C. Ehemann, who has been working on the team appointed to raise funds for the Baptist Memorial Hospital among the lumbermen, reported that May Brothers had subscribed \$2,000 and that the members of the club had contributed \$7,000, including that amount. He thanked them for their active support of the hospital, which is to be greatly

enlarged for the purpose of taking care of sick or wounded soldiers who may be sent here by the government, and for the purpose of more than doubling the number of nurses who may be trained for caring for Red Cross work and other duties in behalf of the men in khaki.

Elias B. Gates delivered a talk on the income tax and gave the lumbermen a great deal of valuable information to guide them in making their personal returns as well as returns for their firms and corporations. The interest in what he said was evidenced by the many questions asked him when he had finished.

Otis E. Elger of Grand Rapids, Mich., spoke briefly. He said among other things that the Lumbermen's Club of Memphis was the finest body of lumbermen anywhere in the world, and that he always enjoyed their hospitality and their fellowship when he came south about once each year.

Secretary J. Staley Williford read a letter from the War Food Garden Commission at Washington urging the lumbermen to continue to give ground to their employees for gardens and to see that they cultivated the plots and thus added to the quantity of vegetables available.

With the Trade

Edgerton-Fulton Company Organizes

One of the new companies operating in the wholesale trade with a yard at Earlinger, Ky., is the Edgerton-Fulton Lumber Company, with general offices at Earlinger, and operating mills in Kentucky and Tennessee. Mr. Edgerton for a number of years has lived at Somerset, Ky., where he has been doing a wholesale business, and Blaine Fulton for some eleven years has been connected with the Clearfield Lumber Company at Clearfield, Ky.

Canadian Carriage Factories Consolidate Purchasing

The Carriage Factories Limited, composed of The Canada Carriage Company, Ltd., Brockville; The Heney Carriage & Harness Company, Ltd., Montreal; The Munroe & McIntosh Carriage Company, Ltd., Alexandria, and The Tudhope Carriage Company, Ltd., Orillia, Canada, announce the centralizing of the purchasing department at the head office of the company. Correspondence should be addressed to the Carriage Factories Limited, 306 Excelsior Life building, Toronto, Ont.

Will Cut Blighted Chestnut

The town of Frederick, Md., owns 1,200 acres of chestnut timber on the municipality's watershed property, and plans are being formed for cutting it. The timber has been killed by blight and unless it is used soon it will be a total loss. Other large tracts of chestnut timber in that part of Maryland will be cut in order to save it from becoming a total loss.

Crane Holdings Worth \$3,000,000

The holdings of the late Clinton Crane in the southwestern counties of West Virginia have been appraised at \$3,199,623. A large part of this property consists of timber and it is scattered through a number of counties. Many of the tracts belonged in part only to Captain Crane.

New Plant for Louisville

It has been announced that Louisville, Ky., is to have another wholesale lumber and manufacturing plant to be operated by the Dawson Manufacturing Company at First street and Central avenue. The company was recently incorporated for \$30,000 with John L. Dawson, of Louisville, president; John W. Kitchen of Ashland, Ky., vice-president, and R. L. Dawson of Louisville, secretary. The factory will specialize in beveled siding, and it will employ forty or fifty hands.

Stack Burns Out

The fine new mill of the Stack Lumber Company, Masonville, Mich., which was completed only a couple of years ago, was destroyed by fire on Sunday morning, January 27. The fire destroyed the band, circular and resaw mills, although the boiler house and engine room were saved. The loss is about \$110,000 on which the company carried \$65,000 insurance.

H. M. Stack, secretary and general manager of the company, states that as soon as weather permits, the company will rebuild and will erect a concrete mill with two bandsaws and resaws, all to be electrically driven.

Southern Company Victim of Bogus Checks

The Green River Lumber Company, Inc., of Memphis, Tenn., reports it has been the victim of the bogus check hold-up. The company was called on the 'phone by a Memphis bank last week and advised that a check purporting to be that of the Green River Lumber Company and printed up in regular size had been turned in. The check, while printed up in regular style, was on different paper, drawn on a different bank and made out on a different form than that used by the Green River Lumber Company. Therefore, while the man responsible for the theft seems to have had no difficulty in cashing the checks, it should be easy enough to check him up in the future.

The Green River Lumber Company has never had an account with the bank on which the checks were drawn.

T. H. Klemmer is the man who signs these bogus checks, and the Green River Company is anxious to do everything it can to help apprehend him.

Lumbermen's Underwriting Alliance

The annual financial statement of the Lumbermen's Underwriting Alliance, Kansas City, Mo., was compiled for 1917, and shows the following facts: The total income since January 10, 1905, was \$5,619,582.78, and the total expenditures during the same time \$4,479,240.66, leaving a surplus and reinsurance reserve of \$1,140,342.12.

The assets for 1917 were cash, \$704,407.18; bonds, \$378,448.68; accounts receivable, \$137,769.20; accrued interest, \$2,652.91; total, \$1,223,277.97. The liabilities for 1917 were, losses, \$56,452.44; expenses, \$26,483.41; surplus and reinsurance reserve, \$1,140,342.12; total, \$1,223,277.97.

The statement also shows that in the face of enormous hazards due to war conditions, the average saving for the year has been 31.78 per cent of the earned premium. The statement also shows that while the Alliance disbursed to its subscribers \$142,183.45 as savings dividends, its surplus and reinsurance reserve shows an increase of \$199,620.90. The Alliance now carries insurance on 624 properties amounting to \$49,292,357.17, representing an increase of insurance in force for the twelve months of \$9,013,435.53.

Becomes Salesman for Chicago Company

J. K. Van Etta, who has represented the Westboro Lumber Company of Westboro, Wis., in Chicago territory, for several years, has started similar work for the Quixley Lumber Company of Chicago. Mr. Van Etta left his Westboro connection last week.

He has been connected with northern hardwood markets for a good many years. His first work was with the Foster-Latimer Lumber Company, Mellen, Wis., after which he handled lumber for the Collins Bros. Lumber Company of Madison in southern Wisconsin and northern Illinois.

"Jake" Van Etta is probably one of the best known salesmen operating in this region. He is a distinct acquisition to the Quixley company just as his connection with the Quixley company is a distinct acquisition to him. The combination should be a winner.

Ernest W. Tickle Writes from France

HARDWOOD RECORD is pleased to publish herewith a letter dated January 10, 1918, which it has just received from "somewhere in France," from Ernest W. Tickle, proprietor of Tickle, Bell & Co., Ltd., 517 Royal Liver building, Liverpool, England. Mr. Tickle is very widely known throughout lumber circles and HARDWOOD RECORD is certain that a great many people will be interested in hearing from him at the front:

Somewhere in France, January 10, 1918: As a lonely reader of HARDWOOD RECORD, may I ask if you will send me copies of it as published? I find my home office sends it to me only spasmodically.

You might put a paragraph in your paper to say that although I, the sole proprietor of Tickle, Bell & Co., am out here as a gunner in the Royal Regiment of Artillery (R. G. A.), my business is being carried on as usual at the old address, 517 Royal Liver building, Liverpool. I am writing from — and hope my American friends will remember that Tickle, Bell & Co. are always at their service.

My address is: Gnr. E. W. Tickle, No. 171193, No. 88 Siege Battery, R. G. A., B. E. F. France.

Strong Statement from Boston Mutual Company

The Lumber Mutual Fire Insurance Company, 141 Milk street, Boston, Mass., has just issued an interesting financial statement showing financial condition of the company on January 1.

The assets cover considerable investment in government and Canadian bonds, state, municipal, railroad and miscellaneous bonds. Also cash of various kinds amounting to \$1,214,201.13. Liabilities cover insurance in force, unearned premiums, taxes, losses resisted or in process of adjustment, reserves, cash surplus, surplus to policy holders, etc., which balance up in line with assets. Thus the total assets are \$3,081,552.36.

Payments from the organization to date, inclusive, show total losses paid policy holders \$1,919,682.30; total dividends paid policy holders, \$2,061,296.45, making total payments to policy holders, \$3,980,978.75.

The rate of dividend to policyholders on terminating policy is forty per cent.

De Camp Joins Thomas Hall Forces

E. W. De Camp, who has been representing the American Column & Lumber Company, at St. Albans, W. Va., having headquarters at South Bend, Ind., has joined the Thomas Hall Lumber Company of Charleston, W. Va., and will represent that company in the field.

The Thomas Hall company is manufacturing the majority of its timber now into the special requirements of government contracts and has felt the need of capable representation in constant touch with the trade holding such contracts.

The company's band mill at Marmet, W. Va., is operating on full time cutting largely white oak into planking and timbers, on government work for the trade having contracts for this class of material.

The mills at Trace Fork and Burnt Cabin, W. Va., are also operating on this class of material.

Mr. De Camp will retain headquarters at South Bend.

Bruce-Case

Charles W. Bruce, secretary of E. R. Spotswood & Sons Company, of Lexington, Ky., stole off and got married a couple of weeks ago. Mr. Bruce had been paying marked attention to Miss Bertha M. Case, of Willmore, Ky., for some little time, but suddenly had the bright idea that it was really foolish to wait for an indefinite period, so he suggested that the matter be taken care of promptly.

After the ceremony in Louisville, Mr. and Mrs. Bruce left for Florida

points, spending several weeks at Tampa and St. Petersburg. While Mr. Bruce brought back with him interesting stories of having been sun-burned while in a bathing suit in Florida, it was generally averred that there was no point on the face of the world where the sun had shone long enough or hot enough to even slightly scorch anyone.

Mr. and Mrs. Bruce will reside in Lexington, Ky., where the main office of the Spotswood company is located.

New Factory for Marquette

The Keystone Handle Company will move its two factories from Pennsylvania to Marquette, Mich., according to Marquette Chronicle of January 26. The old Sumbrook mill in South Marquette is being refitted and will house the new concern, which will employ from fifty to one hundred men. The supplies of hardwoods from the Marquette will be drawn upon by the factory. The upper peninsula of Michigan contains about 6,000,000 acres of hardwood forest.

Charles Good Enters Military Service

Charles Good, general manager of the Oconto Company, Oconto, Wis., has resigned to enter the military service in an executive capacity on the forestry engineering regiments for duty in France. Mr. Good has been intending to take this step for many months, but was prevailed upon to remain at his duties until now. He has been accepted for two officers' training camps and was offered a captain's commission in the U. S. Engineers (Forestry) some time ago. The Oconto company finally has been able to fill his place by the acquisition of R. G. Flanders, formerly sales manager of the Holt Lumber Company, Oconto, and later manager of the George Holt lumber interests in the Georgian Bay district, who already has assumed his new duties and made it possible for Mr. Good to enter active service.

Hackley-Phelps-Bonnell Company Moves Offices to Phelps

C. M. Christiansen became manager of the Hackley-Phelps-Bonnell Company on January 1, and the company the same day moved its general offices to Phelps, Wis., where the splendid new mill is located.

This company has been in business a good many years and has handled its sales work through different channels. With Mr. Christiansen in charge at Phelps, there should be no difficulty in selling the product and getting a price for it.

It will be recalled that the company's mill burned down a year or so ago. The new mill is a high class proposition in every way and it is unusually well equipped all the way through. The company does its own logging, on its own timber, and Mr. Christiansen has a man sized job on his hands to keep the product going through as well as turning it over into "bills receivable."

The new mill started last November and there will be a substantial amount of lumber on hand in the near future.

R. S. Kellogg Takes New Position

R. S. Kellogg, secretary-manager of the National Lumber Manufacturers' Association for the past three years, announced his resignation February 5 in order to accept an invitation from the manufacturers of news print paper to become secretary of the News Print Service Bureau, New York City, on February 15.

Mr. Kellogg takes to the new position an experience of eight years in executive capacities in connection with trade associations, and previous thereto a connection of nine years with the United States Forest Service, during which time he organized and supervised the methods of collecting and publishing annual statistics of all forest products, still carried on by the government.

The News Print Service Bureau is a new organization of the manufacturers of news print paper, the purpose of which is to gather and disseminate information concerning the supply of and demand for news print paper throughout the United States and Canada, as well as abroad, the collection of data upon the supply of all materials used in the manufacture of news print, the development of manufacturing processes, the studying of scientific methods of cost accounting, and investigations into economic conditions affecting the industry. The president of the News Print Service Bureau is J. A. B. Cowles of the Peepscott Paper Company, the vice-president, Maurice Hoopes, president of Finch Pruyn & Co., while Mr. Kellogg will be secretary-treasurer. The chairman of the executive committee is John A. Davis of George H. Craig & Co., New York, and the other members, Sir Wm. Price of Quebec, and George H. Mead of Grand Rapids, Wis.

Thomas J. Shryock

Baltimore has in recent months lost several members of the lumber trade by death, the latest of the decedents being Gen. Thomas J. Shryock, president of T. J. Shryock & Co., Inc., who on February 3 succumbed to pneumonia, after an illness of less than three days. General Shryock, though primarily engaged in the Georgia and white pine business, also handled considerable quantities of the northern woods and his company had in recent years given much attention to Pacific Coast lumber, which it was planning to handle on a much larger scale than before. He was a native of Virginia, a son of a furniture manufacturer, and entered his father's business soon after leaving school. When only a youth he engaged in the lumber trade, and established the firm of Shryock & Clark. This firm he managed with much success for thirty years, when he withdrew and organized the firm of Shryock & Co., which engaged in wholesale operations and attained prominence in the trade here. It acquired also exten-

sive interests in white pine in West Virginia, which enterprise proved to be exceedingly profitable.

General Shryock was a well known master of the Maryland Grand Lodge of Masons for 33rd degree and only last Thursday evening was at the Temple conferring degrees upon a number of candidates. He took an active interest in politics and served as the first republican state treasurer in the history of Maryland. For a time he held the position of treasurer of the Maryland Republican Central Committee, being subsequently made chairman. For a time he was also a police commissioner here. General Shryock, who obtained his title by appointment on the staff of Governor Lowndes, had a host of friends. He is survived by four sons and six daughters, one of the latter being the wife of J. McD. Price, a wholesale hardwood man and former secretary of the National Lumber Exporters' Association.

Pertinent Information

Our Periodical Manufacturing Census

The United States is ahead of all other countries in the world in the manner of taking a periodic census of manufacturing and other product. Every five years such a census is taken, and no other country does it at regular intervals. This policy keeps the business men informed in regard to the raw material used, the finished product, the cost of material and the cost of labor, as well as supplies information regarding various industries and their growth or decline during regular periods.

American Tools in England

A consular report from Birmingham, England, Dec. 19, 1917, speaks of a chance in that country for increased sale of American tools with handles. The report says that light multiple-purpose hand tools, such as American makers specialize in, are being urgently sought, particularly by market gardeners. Horse hoes, both British and American, are likewise in request, as are horse plows, drills and all sorts of miscellaneous appliances. Special consideration is being given to augmenting supplies of cultivating tools and to other aspects of the campaign to increase production of home-grown food. Edge-tool makers are in receipt of more orders than they are able to deal with. Efforts are being made to give all the facilities possible to this branch of the trade, which, important in itself, is still more important just now in its bearing on the food question.

Lumber Reclassification Case Submitted

The lumber reclassification case has finally been submitted to the Interstate Commerce Commission for decision after oral arguments during two days in which the bone of contention was the tentative report submitted by Examiner Fred Esch for approval of the commission in this case, recommending a uniform lumber list for railroads throughout the country and a system of classifying lumber and other forest products according to the weight of each shipment by the carload.

There were some kind words spoken by attorneys for various interests for the uniform lumber list idea, but all speakers but Mr. Esch himself took exception to his carload minimum weight basis for lumber classification, ratings and rates. Counsel for shippers and railroads agreed on this point, though not in detail, and there was a consensus of opinion expressed in favor of postponing further action in the lumber reclassification matter until after the war. J. S. Burchmore, representing the National Wholesale Millwork Association, opposed this idea, pointing out that it would involve delay in redressing the discrimination found by the commission in the Anson-Gilkey & Hurd case, final action in which has been held up pending the conclusion of the classification investigation. Also Commissioner Meyer intimated that the commission might think that war conditions called for radical action in the matter instead of indefinite postponement.

Prices Due to War

The only era in our national history that might be used as a measurement as to what could be expected at the present time were it not for food control is that of the Civil war. Now, after three years of drain there is a known world-wide shortage in food, whereas as a matter of comparison during the Civil war there was no actual shortage in food-stuffs, and yet prices not only went up very rapidly but continued ascending in the latter 60's, after the war had ended. The crest of high prices in any commodity was not reached in that era prior to 1864, and then on but few. Some prices ceased advancing at the close of the war in 1865, and some commenced to decline only in 1867, 1868 and 1869. While the general basis of prices at the commencement of the present era was considerably higher than those at the commencement of the Civil war era, the percentage of increase so far has been, and promises to continue, very much lower. Many commodities in which there was then no real national shortage, but alone a world shortage, increased several hundred per cent over the basic pre-war prices. These increases were almost, if not entirely, due to speculation rather than to any natural laws of commerce. It was partially to prevent a repetition of this disastrous experience that the U. S. Food Administration was created.

A Year's Business at Louisville

Alfred Struck of Louisville, Ky., board of trade, and chairman of the lumber committee, recently made a report on the year's business in that city, and since the conditions there may be taken as an index to conditions throughout the country, a brief summary of the report is here given.

The retail lumber business has been very much affected by the curtailment of building operations, caused by the war. Although millions of feet of lumber were required in the construction of the cantonment buildings, the amount bought locally for this work formed only a small proportion. Prices, however, have been advancing, and, because of the difficulties of replenishing stocks, there was not much cutting of prices. Dealers are taking matters philosophically, and are not losing their heads, but are hoping for developments that will improve conditions in this line.

Wholesale and manufacturing lines have been in a chaotic condition and prices have gone soaring and stocks are depleted. Furniture factories have had a good year.

The production of veneers might be classed as a new feature. A new factory has been built and the old plants have produced veneers in large amounts.

Building operations were of small moment, the poorest that Louisville has known in several years.

Pittsburgh's Building Laws

In Pittsburgh a rather unique, but nevertheless extremely excellent means has been devised to formulate a new building ordinance. A secretary-engineer has been appointed under salary and given a suite of offices and the services of a stenographer, and is, by constructive methods, arranging a new building ordinance which bids fair to excel in brevity and simplicity anything of its kind. This secretary-engineer arranges one section of the ordinance at a time and presents it to the building code commission for their discussion, but previous to this, representatives of various materials such as lumber, steel, cement and others are permitted to present recommendations for consideration. The building code commission consists of one architect, an engineer, one builder, an insurance man and an attorney at law. Before the code is put before the city government for action, it is discussed by the local chapter of the Institute of Architects, the Society of Engineers, Builders Exchange, Insurance Exchange, as well as other interested bodies, in order that each part may be carefully discussed and objectionable matter eliminated before it is finally made a law.

New Demurrage Regulations

The secretary of the Lumbermen's Association of Chicago, E. E. Hooper, informed members of the association on February 5 that certain changes in demurrage regulations on the railroads would take effect February 10. The text of the secretary's letter follows:

Cancelling order No. 3 the director general of railroads in order No. 7 provides that, effective Feb. 10, 1918, all railroads must amend their tariffs to conform to the following changes in demurrage rules, regulations and charges:

A. (1) Forty-eight hours' free time for loading or unloading on all commodities.

(2) Twenty-four hours' free time on cars held for any other purpose permitted by tariff.

B. That the average agreement rule be permitted, but that it apply solely to cars held for unloading.

C. That under the average rules the number of days on which debits accrue be made four instead of five.

D. That the demurrage charge on all cars, after the expiration of the free time allowed, be \$3 for each of the first four days, \$6 for each of the next three days, and \$10 for each succeeding day.

E. That the bunching rule be reinstated with the following change in paragraph 2: When, as the result of the act or neglect of any carrier, cars originating at the same point or at intermediate points moving via the same route and destined for one consignee, at one point, are bunched at originating point, in transit, or at destination, and delivered by the carrier in accumulated numbers in excess of daily shipments, the consignee shall be allowed such free time as he would have been entitled to had the cars been delivered in accordance with the daily rate of shipment. Claim to be presented to carriers' agent within fifteen days. These charges are to supersede all those named in any existing tariffs applicable to carload freight except: (1) Cars loaded with live stock; (2) empty cars placed for loading coal at mines or mine sidings or coke at coke ovens and cars under load at mines or mine sidings or coke at coke ovens; (3) foreign export freight awaiting ships at ports; (4) coal for transshipment at tide-water or lake ports; (5) empty private cars stored on railroad or private tracks, provided such cars have not been placed or tendered for loading on the orders of a shipper.

Hardwood News Notes

← MISCELLANEOUS →

The Southern Treenail Company has been incorporated at Burnsville, N. C.; capital, \$10,000.

The Betts Lumber Company has recently commenced business at Bufalo, N. Y., wholesaling lumber.

A voluntary petition in bankruptcy has been filed by the Mogul Motor Truck Company, St. Louis, Mo.

Atwood Brothers have incorporated under same name at Whitman, Mass., with a capital of \$300,000.

Posts, Poles and Ties, and Hemlock Tan Bark

Herbert C. Jones has been appointed temporary receiver for the Clark, Randall Miles Chair Company, Shelbyville, Ind.

The Carolina Veneer Company, Columbia, S. C., is reported to have sustained a fire loss.

The Caldwell Lumber Company, Oil City, Pa., has sold out to the Oil City Woodworking Manufacturing Company.

The capital stock of the Dudley Lumber Company, Memphis, Tenn., is now \$75,000, it recently having been increased to this amount.

At Richmond, Va., the Collapsible Box Corporation, has incorporated at \$500,000, as has the Wilson Mill & Lumber Company, Rural Hall, N. C., at \$25,000.

The C. W. Kotcher Lumber Company has incorporated at Detroit, Mich. The Brooklyn Show Case Company, Brooklyn, N. Y., and the Rochester Parlor Furniture Company, Rochester, N. Y., are involuntary bankrupts.

The Kentucky Veneer Works has been incorporated for \$100,000 at Louisville, Ky.

Other incorporations are: The Allaire Woodworking Corporation, Richmond, Va., capital \$225,000; Western Carolina Lumber Company, Burnsville, N. C., capital \$150,000; M. N. Offutt Lumber Company, Huntington, W. Va.; the Randolph Lumber & Chair Manufacturing Company, Ashboro, N. C., and the J. Elwood Cox Manufacturing Company, High Point, N. C.

← CHICAGO →

Among the Chicago visitors this past month was W. S. Hall of Mallison & Co., London, England. When last seen he was conferring with W. O. King of Chicago, and we anticipate that the undersea boats will have some lumber to shoot at some of these days.

The conference between the forty-odd lumber manufacturers and wagon manufacturers' committees here week before last didn't seem to get very far toward meeting the ideas of the wagon men on dimension stock and selling large quantities of boxboards. However, it is only a question of time, in order to complete contracts, that the wagon men will have to meet conditions of the lumber manufacturers. We understand the figures paid for these wagons by the government were at a good run of prices, and why should wagon manufacturers expect to have the cream of woods, after a tree is cut up into dimension, at \$10 less than the lumber should be sold at?

Walnut operators who had one of the busiest years in their history, were in town the other day preparing to work out the government's problems on gunstocks, airplane material and other specialties which the material and production departments of the signal corps have been utilizing in flying machine manufacture. Their conferences have been very beneficial and they have a wider range of touch on raw material and specialty producing for our government and allies.

Mr. and Mrs. C. A. Goodman of Marinette, Wis., came on to Chicago

Friday night, February 1, their intention being to visit the automobile show. Seemingly they did not succeed in getting hotel accommodations for the register did not disclose their names on Saturday night.

About ten days ago E. M. Vestal of the Vestal Lumber & Manufacturing Company, Knoxville, Tenn., attended the conference of wagon oak manufacturers. Mr. Vestal was accompanied by Mrs. Vestal who went on through to visit her parents at her former home in Omaha, Neb., for two or three weeks.

L. H. Levis of the Scott & Howe Lumber Company, Oshkosh, Wis., spent a few days in Chicago recently.

C. H. Worcester of the C. H. Worcester Company, Chicago, spent a few days at his home office, this being one of the infrequent opportunities he has for getting away from his arduous duties as a member of the lumber committee of the National Council of Defense at Washington.

The capital stock of the Streater Car Company, Streater, Ill., has been increased from \$250,000 to \$300,000.

The following Chicago concerns have filed involuntary petitions in bankruptcy: The Columbia Parlor Frame Company, the Damm Sauer Upholstering Company, the Irving Park Sash & Door Company and the Republic Phonograph Company of Illinois.

The Anguera Lumber & Tie Company's capital stock has been increased to \$60,000.

An extension is being asked by the Englewood Sash & Door Company, city.

Col. James Buckley for "ninety-nine" years president of the Indiana Hardwood Lumbermen's Association, has retired from the hardwood business and given up his position as treasurer. George M. Personette of Brookville has succeeded him in addition to continuing to operate at that point. We hope that our friends from Brookville will both be prosperous.

◀ BUFFALO ▶

Orson E. Yeager, president of the Buffalo Automobile Club, was chairman of a committee to hold a thrift day parade here on February 4 with several hundred automobiles in line. Buffalo was the first city to organize a celebration of the kind and the movement for the sale of thrift stamps was given a good boost.

Lumber shippers who have been dependent upon transit cars for supplying their customers have lately discovered that they cannot afford to continue in that line. The plan was to consign a car to themselves at some junction point and then sell it in time to divert it to the ultimate destination. The result now would be the car held up at the junction and they paying demurrage on it, so the rule is to consign to the customer direct and then demurrage, if any, is on him.

Letters received here from western mills state that they have practically given up loading lumber on anything but government business, and they must have the quartermaster's signature at that. This makes it very difficult for a jobber to do any business at all. Hardwood jobbers here have good amounts of lumber bought and some of it sold, but they cannot get it moved.

A report comes from Albany that the Federal government will give preference to lumber and timber for the construction of barges on the improved Erie canal in this state. State Engineer Frank M. Williams has been in Washington, taking up the matter in detail with the Emergency Fleet Corporation and other officials. It is estimated that the Erie barge canal will carry 10,000,000 tons of freight the coming season, if it is opened in time and an adequate fleet is provided. The fleet corporation has been asked to appropriate \$5,000,000 to the construction of these barges. Old boatmen see two difficulties in the way. One is that the fleet will be slow in building and the other is that the canal will not be ready next May, because of the slow work on the part of construction contractors.

The Curtiss Aeroplane Company has received building permits for a number of new structures to be erected at the plant on Elmwood avenue, including a new office building and restaurant.

◀ PITTSBURGH ▶

More than twenty bridges were washed out through a recent flood at Sewell, W. Va., where one of the big plants of the Babcock Lumber Company is located.

The Kendall Lumber Company is practically snowed in at its big plant at Crellin, Md. The difficulty in getting shipments is so great that this company has called in its salesmen for the present.

Captain A. Rex Flinn of the Field Artillery, and president of the Duquesne Lumber Company, was home for a few days last week. His mill at Braemar, Tenn., is doing as well as could be expected under adverse railroad conditions and with a short labor supply.

W. D. Johnston, president of the American Lumber and Manufacturing Company, is rounding up his big northwestern shipments for government use in fine shape. The lumber is coming forward rapidly and this is one of the biggest operations ever undertaken in the country.

The Universal Lumber Company is furnishing a fine lot of lumber for the big plant of the Owen Electric Company in the east end.

The Frampton-Foster Lumber Company is getting ready for the most aggressive spring campaign it ever started. This will be directed not so much toward new sales as to give its present customers the highest measure of service in stocks and shipments.

January building operations in Pittsburgh made the poorest showing

of any January in fifteen years. The total was only \$314,415 for eighty-five permits, about one third of which were for repairs and for extensions. This report shows almost complete stagnation of the building industry in Greater Pittsburgh at present.

◀ BOSTON ▶

The presidents of the eight New England railroads have organized The New England Railroads Executive Committee, which in conjunction with the New England Transportation Conference are to endeavor to analyze and propose remedies for the present freight situation in this section. These two organizations will meet weekly and submit to the Washington traffic authorities practical steps, along such lines as the industrial section of this conference may agree are most needed, to operate all the lines in this section toward restoring operative conditions to many partially or wholly suspended plants.

A recent fire in the buildings of the Essex Lumber Company, Lynn, Mass., destroyed all of their finished stock and caused the death of one fireman. Most of the snow-covered piles were saved. The South Bay storage warehouse in the Roxbury district of Boston was also visited by fire resulting in considerable damage to the company's property and also to a number of the dealers having stock on storage.

The financial embarrassment of W. C. Miles & Co. of Medford, Mass., and the Franklin Park Lumber Company of Franklin Park (Saugus), Mass., is currently reported.

◀ BALTIMORE ▶

Not less than three establishments that were large users of lumber suffered extensive damage by fire here in the last ten days or two weeks. One of them was the shipbuilding plant of the H. E. Crook Company, on the Spring Gardens side of Locust Point, at which a damage of perhaps \$75,000 was done.

The pattern shop, warehouse and boiler room of the Henry W. Smith Shipbuilding Drydocks Company, at Curtis Bay, was destroyed by a blaze on the night of January 26, with a loss of approximately \$75,000, and the plant of the Keating Mill and Lumber Company, Clifton avenue and the Western Maryland railroad, was laid in ruins February 1, the loss being estimated at \$20,000. The two ship yards were at work on wooden vessels for the government under the Shipping Board program, while the Keating factory was turning out joinder work for wooden ships. The work of alien enemies has been suspected, but so far no evidence to support this theory has been found. All of the plants will rebuild as rapidly as possible.

Fire on January 23 destroyed the store and office of the Warn Lumber Corporation at Raywood, Pocahontas county, W. Va., the loss being estimated at \$25,000.

A lumberman to pass away in the last week was William Wrightson Tunis, one of five brothers, practically all of whom became prominent in the North Carolina pine trade, and were among the first to erect a modern saw mill in the South. Mr. Tunis was seventy-seven years old and had lived in retirement for some years.

It is reported that government auditors have been in Baltimore recently making an investigation into the cost of conducting lumber yards. The information thus obtained is to be used as a basis for an agreement between the owners of the yards and the government as to the price of lumber commandeered to meet the needs of the military authorities. The settlement of this question is earnestly desired. Members of the lumber trade are of course patriotic and entirely willing to aid the government in every possible way, but they also believe that they should receive fair compensation for the stocks requisitioned, especially since it will be almost impossible to replace them, and certainly not at the figures that prevail at the time the lumber was purchased.

◀ COLUMBUS ▶

One of the most striking and interesting exhibits at the Columbus real estate and building show, which was held January 23 to February 2, is that of the Columbus Lumber Trade Exchange. This association erected a complete modern bungalow of six rooms, artistically furnished throughout. The cost of the bungalow was \$3,000. Members of the exchange supplied the lumber and a number of local firms did the furnishing. The purpose of the exhibit is an exposition of the desirability and economy of lumber for homes and the enabling of prospective home builders to actually see the home before contracting for it. The plan will be carried out as a permanent department of the exchange and a downtown location will be announced, where home-seekers may inspect various types of homes complete. The Columbus Lumber Trade Exchange is giving free to children a \$250 bungalow playhouse, furnished by the Southern Pine Association, for the best essay on "Why a Home Should Be Constructed of Lumber."

An effort has been quietly under way for several weeks to sound the possibility and desirability of forming an Ohio battalion of lumbermen for the Twentieth Engineers. Following a meeting of the directors of the Ohio Association of Retail Lumber Dealers at Columbus December 5, at which the project was discussed, a committee of directors called upon Governor Cox, who pledged his hearty support to the movement. Subsequently an officer of the association visited Washington and discussed the matter with officials of the Forestry Department and officers of the Twentieth Engineers. It was ascertained that there are still some five or six bat-

tations to be recruited. In spite of appeals that have been made through the trade press and by circular recruiting, this important branch of the service is going very slowly. Men are being asked to transfer from the branches of the service they are now in to the Twentieth Engineers if they have had lumbering experience. Their reluctance to do this, and in general the slow recruiting is attributed to the fact that the men do not relish the prospect of leaving officers and comrades with whom they are acquainted for strangers.

John Wickerly, Whitehouse, O., has sold out his lumber business to Buckler & Studer.

The Slagel Lumber Company, Lima, O., has taken over the business of the Robinson & Curray Lumber Company at Marysville.

At the annual meeting of the Union Association of Lumber, Door and Sash Salesmen, held in Columbus the latter part of January in conjunction with the annual meeting of the Ohio Association of Retail Lumber Dealers, the following officers were elected to serve for the ensuing year: President, C. E. DeLong of Toledo; vice president, W. B. Stewart of Dayton; secretary-treasurer, John P. Bartelle of Toledo. The directors: J. D. Farley, Cincinnati, George C. Schweiger, Cleveland.

A communication from the National Association of Lumber & Sash Door Salesmen was tabled, and the matter of an outing at Cedar Point in the summer of 1918 was left to the officers for determination.

Salesmen of long ago, a large proportion of whom are lumber salesmen of the present, attended a luncheon at Columbus during the meeting of the two Ohio lumber associations for the purpose of renewing old acquaintances. It was decided to form an organization known as the Old Guard. Morris A. Hayward of Detroit, formerly of Columbus, was elected president and Allen A. Smith of Toledo vice-president. John P. Bartelle of Toledo was elected secretary-treasurer. The call for the meeting came from W. E. Ford of Mansfield, one of the old timers. In all sixteen of the old timers were present to unite with the new organization.

R. W. Horton of the W. M. Ritter Lumber Company reports a fairly good demand for hardwoods, especially from manufacturing plants. Box and implement factories are the best customers at this time. Prices are firm. Shipments are slow because of embargoes and railroad congestion.

The Emory River Lumber Company, Cincinnati, has increased its capital from \$200,000 to \$400,000.

The following firms in Cleveland report an increase in capital stock: The Barner-Mead Lumber Company, from \$40,000 to \$100,000; The Wickliffe Lumber Company, from \$25,000 to \$50,000; The Central Lumber Company, from \$25,000 to \$50,000.

The Winn Cypress Company, Dayton, has increased its capital from \$5,000 to \$10,000.

The James Oklen & Sons Saw Manufacturing Company, Columbus, has increased its capital from \$12,000 to \$200,000.

The Green Tie Company, capitalized at \$12,000, and The Portsmouth Tie Company, capitalized at \$12,000, both of Portsmouth, have been incorporated to deal in ties. The incorporators of both firms are E. H. Green, V. S. Taylor, L. C. Smith, L. Taylor and Frank W. Moulton.

◀ CLEVELAND ▶

Cleveland hardwood interests are joining with all lumber representatives in this district in the movement of the Cleveland Board of Lumber Dealers to increase building operations, and consequently bigger demand for lumber materials, through more liberal loans from financial institutions. Facts gathered by a survey committee of the board shows that while there is more than \$500,000,000 in national and state banks in the Cleveland district, there is less than \$30,000,000 in the savings and loan associations, which are considered the natural medium through which real estate operation loans are made. It is the aim of the board here to get increased deposits for the savings and loan associations, so that more money will be available for building purposes, as well as to increase the showing as compared with other cities in Ohio. Plans are being considered by J. V. O'Brien, secretary.

Fred P. Potter of Potter, Teare & Co., chairman of a committee formed to ascertain the cost of doing business in the past year, advises that in 1917 the average cost of handling lumber in the Cleveland district was \$10 per thousand, which is twice that of 1915.

E. M. Carleton of the Mills-Carleton Company has left for the South, where he will remain the balance of the winter.

O. T. Jenks, who has been sales manager of the C. H. Foote Lumber Company, has resigned to engage in other business.

◀ INDIANAPOLIS ▶

James I. Disette last week purchased the plant of the Interior Hardwood Company in Indianapolis for the use of the Indianapolis Wirebound Box Company. The property was valued at from \$50,000 to \$60,000, and stands on an excellent manufacturing site of two acres. The plant is composed of three modern brick buildings with a floor space of 50,000 square feet. The Interior Hardwood Company had been engaged in the manufacture of hardwood flooring for the last twenty-five years.

The Imperial Desk Company of Evansville, Ind., has increased its capitalization from \$100,000 to \$200,000. General business expansion is planned by the company.

The furniture manufacturing industries of Evansville, Ind., are facing a serious situation as a result of the fuel shortage. The D. L. Conrey, the Danziger Furniture Company and the Shelbyville Wardrobe Company are now closed because steam coal cannot be obtained. Other furniture

factories in Shelbyville must close for a few days if coal is not available by that time.

The plant of the Banta Lumber Company, at Goshen, Ind., has been closed for more than a week as a result of a fuel shortage.

Septimus H. Smith, sixty-one years of age, owner and publisher of the two trade magazines, *The Woodworker* and *The Craftsman*, died in Indianapolis last week after a short illness. He had been a resident of the city for forty-five years, and had conducted the two magazines for thirty-five years. He is survived by a widow and two daughters. Mr. Smith was prominent in business circles, and formerly was a member of the board of directors of the Indianapolis Chamber of Commerce.

EVANSVILLE

M. D. Helfrich, president and general manager of the Helfrich Manufacturing and Lumber Company, recently closed a deal for the timbered holdings of the Ewald Rolling Mill Company of Louisville, Ky. The land bought is in Lyon and Trigg counties, Kentucky, a few miles below here, and the consideration is reported to have been for \$100,000. The tract of land bought lies in the Cumberland river valley and is said to be one of the finest in Kentucky.

The Hail Spoke Company, Doolittle Mills, Perry county, Ind., managed by James R. Hail, is now running at full capacity, working on large government orders for oak and hickory spokes that will keep the plant busy for several weeks.

It is announced that Nix Brothers, manufacturers of wagons and other vehicles at Poseyville, Ind., will soon erect a new factory.

David James, pioneer sawmill operator of Frankfort, Ind., died of pneumonia recently. He was exposed in a severe blizzard and lived but a few days after going to bed. He is survived by a family.

The Mogul Wagon Works, Hopkinsville, Ky., recently received a large government order for wagons and trucks, and since then the large factory has been working at full time.

George O. Worland, secretary of the Evansville Veneer Company, and B. F. Von Behren, president of the Von Behren Manufacturing Company, have been chosen directors of the Evansville Manufacturers' Association for the ensuing year.

Fire on January 15 destroyed the plant of the Greer Wilkinson Lumber Company at Franklin, Ind. The loss, estimated at about \$10,000, is covered by insurance. It is believed the fire originated in the boiler room. Most of the lumber in the plant was saved.

Fire of a mysterious origin recently damaged the plant of the Owensboro Planing Mill Company, Owensboro, Ky. The loss is partly covered by insurance.

On January 21 a fire originating in one of the dry houses of the Globe-Bosse-World Furniture Company caused a damage of about \$10,000, with insurance. Owing to the heavy snow on the ground at the time, firemen were handicapped in fighting the flames. On the next night, fire of a mysterious origin in the varnish room of the Bockstege Furniture Company was confined to about \$1,000. Both the Globe-Bosse-World and the Bockstege companies have recently had labor troubles in their plants.

During the recent rise in Green river much floating property was in danger, and many logs and railroad ties were saved after hard work. For the first time in many years heavy ice gorges formed in Green river, and when they passed out more than two million dollars worth of floating property in the mouth of Green river was in danger of being swept away. Luckily all the crafts were saved. The Ohio river has been frozen over for more than two months.

LOUISVILLE

Louis Wymond, head of the Chess & Wymond Company, Louisville, has been visiting his daughter at Beaumont, Tex., and handling some business matters at El Paso, having spent a month or more in Texas since the first of the year.

The closing order of the Fuel Administration was rather a lucky thing for the National Home & Chain Company of New Albany, Ind., as on Monday of last week the roof of the plant collapsed from the weight of snow. Ordinarily there would have been sixty men at work, but only four people were in the office and no one was injured. The loss, including damage to woodworking and other machinery, was estimated at \$5,000.

For the first time in several years the Owensboro, Ky., Wagon Company has paid a dividend, this being a three per cent semi-annual dividend, which was paid in January. The board of directors reported that 1917 was the most successful year the company has ever experienced, and the outlook for 1918 is still brighter. This company has been working on some good war contracts, which have resulted in the plant being kept busy all year.

T. M. Brown of the W. P. Brown & Sons Lumber Company, Louisville, and Tom Christian, sales manager of the Wood-Mosaic Company, New Albany, Ind., were recently in Chicago, where they attended a meeting of the vehicle manufacturers' association, in order to obtain a line on the possible vehicle requirements of lumber and woodwork in 1918.

Announcement has been made at Paducah to the effect that the Southern Hardwood Lumber and Tie Company, a Kentucky corporation, is dissolving, and is now winding up its business.

At Tompkinsville, Ky., W. D. White, a large manufacturer of axe handles, has announced the recent purchase of a tract of standing hickory timber in Monroe county, this timber being sufficient for the requirements

of the plant for a period of three years. Mr. White recently doubled the capacity of his plant, and has been figuring on putting in machinery for finishing spokes for autos and wagons.

Waller Bean of the Hon Lumber Company, Winchester, Ky., recently returned from a trip through eastern Kentucky, where he purchased a lot of hardwood lumber for the Winchester plant. Mr. Bean is being kept very busy just now, during the absence of Senator Hon, who is attending the meeting of the legislature at Frankfort.

A deal has been closed at Elizabethtown, Ky., whereby the Fred G. Jones Lumber Company of Louisville, takes over the remaining interests of T. J. Morrison, in the T. J. Morrison Lumber Company, established by Mr.

Morrison seventeen years ago, and in which the Jones company has held an interest for some time. Mr. Morrison has purchased a fine farm near the city, and retired from active business. A. M. Stockard will manage the Elizabethtown office. The Jones company also has interests at Glendale and at Vine Grove, Ky.

A great deal of damage has been done in Kentucky within the past ten days or two weeks as a result of melting snows, causing rivers and streams to reach flood stages. This also caused several ice gorges to break, resulting in logging, boom and transportation companies losing heavily. The recent breaking of a gorge at Paducah, Ky., wrecked a number of steamers, packets, towboats and barges. The Ayer & Lord Tie Company was one of the heaviest hit. On the Kentucky river and its tributaries the logging and lumber concerns were also hard hit, as a number of booms broke, releasing thousands of logs, ties, lumber, etc., which could not be salvaged in any considerable degree because of the heavy ice. Reports from eastern Kentucky show that quite a number of big concerns lost logging trackage, river equipment, booms, lumber, logs, staves, etc. At Quicksand, Ky., the Mowbray & Robinson Company of Cincinnati lost five miles of railroad, log booms and a large number of logs, the estimated damage being \$50,000. The Kentucky Lumber Company is reported to have lost 75,000 logs when a boom broke near Burnside, Ky., while other large losers were the Bassett Hardwood Lumber Company of Monticello; the Burnside Cedar Company, Burnside; the Day Lumber and Coal Company, Jackson, and the Chicago Veneer Company, while the Ferguson Hardwood Lumber Company of Paducah, Ky., lost a barge and other river equipment. A sudden freeze stopped the flood for a time, and it is hoped that the following thaws will be gradual enough to prevent further damage. However, heavy ice in the larger streams is doing tremendous damage to transportation companies, and this will result in a shortage of boats and barges in the spring, as it is estimated that more than \$3,000,000 worth of river equipment has been sunk or destroyed. However, this spells a busy season for the river shipyards, although it will cause much trouble in handling shipments to river towns.

The first February meeting of the Louisville Hardwood Club was scheduled for Tuesday, February 5, but was set up a few days so as not to interfere with members who desired to attend the meeting of the Hardwood Manufacturers' Association at Cincinnati. Two visitors were present: Bob Carnahan of Brown Brothers & Carnahan, Pine Bluff, Ark., and Maurice Welsh of the Welsh Brothers Lumber Company, Memphis, who for several years was with the Lamb-Fish Lumber Company of Charleston, Miss. Mr. Carnahan was formerly a Louisville operator, and at one time a member of the Louisville Hardwood Club, but it has been a number of years since he attended a meeting. Mr. Carnahan in a short talk stated that in his opinion it was essential that lumber dealers obtain a good percentage of government orders if they intended to conduct a successful business in 1918, as transportation conditions are such that other business does not look very promising. Mr. Welsh was much pleased with the big improvement shown in the demand for thick oak.

ARKANSAS

The Mechanics Lumber Company of Little Rock has increased its capital stock \$25,000 to \$40,000, and the Enterprise Lumber Company has taken similar action, the increase being from \$15,000 to \$25,000.

The E. H. Ewing Lumber Company of Heber Springs, Ark., has filed a certificate of dissolution and surrendered its charter.

Frank F. Fee, president of the Fee-Crayton Hardwood Lumber Company, Dermott, was elected president of the National Lumber Exporters' Association at the recent meeting in New York. Mr. Fee resides at 1900 Broadway street, Little Rock, and is well and favorably known among the lumbermen of this section.

The recent decision of the United States Supreme Court sustaining the ruling formerly made by the federal courts to the effect that it is not necessary for the shipper to show actual loss to collect on overcharges on freight shipments is looked upon as of importance to the lumbermen of this section. The case involved the collection of a claim for \$2,061 by way of overcharges by the American Hardwood Lumber Company of Louisiana and Arkansas, and arose when the reparation was allowed upon the claim by the Interstate Commerce Commission, the railroads taking the position that it was necessary, before the manufacturer or shipper could collect for it, to show that it had been actually damaged and had not passed on the overcharge to the ultimate consumer. This contention was overruled by the lower court, which held that it was only necessary to show an overcharge, the collection of rates in excess of those allowed by the commission's tariff, and now the Supreme Court has taken the same view of the question and settled the matter favorably to the lumber manufacturers.

The Eckhardt & Lennon Company has purchased the stave and heading plant of the Pekin Cooperage Company at Paragould, which is one of the largest of its kind in the state. The Pekin company still owns and operates a number of stave and heading mills in Arkansas.

The Mount Olive Stave Company of Batesville has increased its capital stock from \$10,000 to \$15,000. It had the misfortune of losing its plant by fire on the night of December 24, 1917, but this is now being rebuilt, and the company will soon be operating again on a bigger scale than before.

The Texarkana Broom Company of Hope has increased its capital stock from \$25,000 to \$50,000.

← WISCONSIN →

H. L. McKusick, Stillwater, Minn., was elected secretary of the American Immigration Company and affiliated companies at the annual meeting held in Chippewa Falls, Wis. He fills the vacancy caused by the death of E. L. Ainsworth.

The Yawkey-Bissell Lumber Company, Wausau, Wis., has increased its capital stock from \$350,000 to \$500,000 to accommodate the growth of its business.

The Automatic Cradle Manufacturing Company, Stevens Point, Wis., maker of cradles and similar furniture, was requested by the war department last week if it was in position to manufacture ax, shovel and pick handles. The department was advised that the plant is equipped to manufacture furniture only, but was offered the entire facilities of the plant for any purpose for which it can be utilized.

Articles of incorporation have been filed in behalf of the Brown Land and Lumber Company, Rhinelander, Wis. The capital stock is \$1,000,000 and the incorporators are Luther E. Webster A. and Edith F. Brown.

The Kaye Carving Works, which moved to Green Bay from Stevens Point when its plant was destroyed by fire recently, already has been obliged to take larger quarters and is moving to the former plant of the Clukey Multiplier Company in Green Bay. The firm does hand and spindle carving and makes wood statuary, collection plates and similar hardwood products.

Gustave Createns, who established a potash works in Phillips, Wis., about a year and a half ago, has disposed of his interests to a new corporation, styled the Phillips Potash Company. The officers are: President, W. K. Parkinson; vice-president, K. C. Jakoubek; secretary and treasurer, Robert Jakoubek.

Wagon and sleigh factories in Wisconsin have been experiencing the busiest season in years, due to the unusually heavy snowfall throughout the country, which has created a better demand for sleighs than has been noted in a decade. Orders have been received from sections which never before demanded sleighs. The Schmidt & Stork Wagon Company, West Bend, Wis., alone filled orders for more than 4,250 sleighs during the present winter.

The Green Bay Barker Company, Green Bay, Wis., maker of machinery for removing bark from logs, is erecting a one-story shop addition, 60x100 feet in size.

The affairs of the Kurth Broom Company, Milwaukee, which recently was involved in bankruptcy proceedings, have been settled. A final dividend of 19.3 per cent, amounting to \$477.32, was declared. Two dividends of 10 per cent each had been declared previously.

The Crocker Chair Company's sawmill at Antigo, Wis., has resumed operations after being closed for about two months for repairs and overhauling. In that time the circle saws have been supplanted by a modern band-saw and a new filing room erected.

The J. L. Clark Carriage Company, Oshkosh, Wis., has changed its corporate style to J. L. Clark Manufacturing Company to better designate its line of products since the manufacture of vehicles has become a minor part of the business. Elmer Leach is president and Warren G. Maxcy is secretary.

The Rib Lake Lumber Company, Rib Lake, Wis., has been badly hampered in filling its orders by the shortage of cars and difficulty of moving material. At the close of January the Company was approximately fifty cars behind on orders.

The Hamilton Manufacturing Company, Two Rivers, Wis., a large manufacturer of printing office furniture, fixtures and accessories, is filling a large order for airplane parts for the Dayton Wright Airplane Company, Dayton, O., which holds large government contracts. The contract will keep the Hamilton plant busy at full capacity for several months.

The organization of the Universal Shipbuilding Company, Sturgeon Bay, Wis., which will take over the plant and business of Rieboldt, Wolter & Co., wooden shipbuilders, on June 1, has been completed by the election of the following officers: President, Philip Binzel, Oconomowoc, Wis.; vice-president, Gustav A. Huck, Sturgeon Bay; second vice-president, Hubert Riesen, Milwaukee; secretary, Louis Luebscher, Jr., Milwaukee; treasurer, Herbert L. Peterson, Sturgeon Bay. The company has a capital stock of \$1,500,000 and is owned largely by Milwaukee interests. As soon as the Rieboldt-Wolter company completed a government transport, known as boat No. 61, which is now in process of construction, the yards will be turned over to the new owners. Extensive enlargement is planned so that more and larger boats may be undertaken.

The Goodman Lumber Company, Goodman, Wis., has tendered the unrestricted use of its clubhouse to the new company of the Wisconsin State Guard recently formed by employees of the company and other residents of Goodman, with Charles N. Baker as captain. The State Guard has been created to take the place of the Wisconsin National Guard while it is at the front.

The Home Builders' Finance Company, Milwaukee, has been organized with a capital stock of \$100,000 to engage in the construction and financing of dwellings. Among the incorporators is George F. Eller, head of the John Eller Lumber Company, Milwaukee.

F. E. Burbach of the Mohr Lumber Company, Tomahawk, Wis., who spent some time at the main offices in Portage, Wis., last week, reported that the sawmill is operating at maximum capacity on a large cut of fine hardwood

Have you seen any better Walnut logs than these?

THEY all grew right in Indiana where hardwoods have always held the choicest farm lands. The best growth of timber as well as the best yield of wheat comes from good soil. The soundness of the log-ends shows that they fed on the fat of the land. My

Indiana Oak
comes from the same soil

logs delivered from its four logging camps near the Oneida Price county line. The logs are hauled twenty-nine miles by rail, mostly over the company's own tracks. "Business is booming and the demand is sharp and prices firm," said Mr. Burbach.

The Elberton Lumber Company, Tigerton, Wis., started hauling logs from its camps near Summit Lake, Wis., late in January, a large steam hauler being employed. More than 3,000,000 feet of logs had been decked in the woods when hauling started, insuring an ample supply for the mill for the season.

The Holt Lumber Company, Oconto, Wis., has completed the installation of another large generating unit in its planing mill for the purposes of the Oconto Electric Company, which supplies the city and private consumers. The new unit gives the company three separate and independent sources of power in case of emergency.

The Kiel Woodenware Company, Kiel, Wis., has completed important improvements in its mill at Mellen, Wis., and increased the working force from seventy-five to more than 100 operatives on February 1. The improvements included the installation of a 200 horsepower Corliss steam generating unit.

The Crocker Chair Company, Chicago, issued notice to all plants recently that full pay be given to employees who are kept idle because of the Garfield coal-saving order. This does not affect the company's sawmills at Antigo and Elton, Wis., which are enabled to operate on Mondays, because their fuel supplies are derived almost entirely from wood waste.

N. D. Sergeant, Springbrook, Wis., has purchased a large portable steam-operated sawmill outfit and expects to cut from 600,000 to 750,000 feet of logs in that vicinity during the coming season. Much of the log supply in sight consists of hardwoods.

The Shawano Hub Manufacturing Company, Shawano, Wis., has been reorganized as the Shawano Box Company and will discontinue the manufacture of hubs and bolts in favor of boxes and veneers. F. C. Werbelow has been appointed general manager and will be assisted by Henry Neumeier, who had charge of the plant under the former policy.

The W. J. Campbell Lumber Company, Oshkosh, Wis., has increased its capital stock from \$60,000 to \$120,000. Delwin Towle is secretary.

The Hardwood Market

CHICAGO

Chicago is getting more and more into war consideration. A good deal of lumber handled through this market is going into boxes and containers. The section in and around Chicago has a great many producers of wagons and other vehicles used by the government in its war work. The result is that there is a good deal of activity around here looking towards the lining up of stock for such purposes.

There is developing some hope of building renewal as building weather comes on. Without doubt this hope will materialize to a degree. Sales and prices are promising, with strength holding as well in the northern as in the southern woods. In fact, lumbermen familiar with the local situation express real enthusiasm over the conditions and possibilities of the market.

BUFFALO

Many difficulties are standing in the way of carrying on hardwood trade at present, one of the chief ones being the embargoed conditions on all the rail lines. The weather has been intensely severe during the past weeks and winter temperatures have been uniformly low since November. As a consequence the railroads have been unable to keep freight moving and their engines have been frozen to the tracks. About all the business that can be done is in local or close-by territory, and naturally there is not enough to go around and give everybody a large part.

Because of the scarcity of stocks coming from the mills and the depletion of yard stocks, prices have been on a high level. Where customers had to have lumber immediately they have lately been paying unusually high prices and no prospect appears to exist of any break in the market. Wholesalers are hopeful that the rail situation will improve within the next few weeks, but so long as the weather remains on a zero basis not much opportunity for a change exists.

Woodworking plants have had much trouble in getting sufficient fuel supplies during the past few weeks. In some cases factories have had to shut down for a few days as the result of coal shortage. The outlook is not at all favorable to a plentiful supply of coal in the near future, and so far as can be seen the order to close down industrial establishments for five days and on successive Mondays has not brought about the relief that was hoped for. It was not much hardship for many plants to shut down, because the railroads are unable to move much freight where factories are open.

PITTSBURGH

Much complaint is heard about shipments. The difficulty of getting lumber through to its destination is greater now than at any time this winter. It would be hard to conceive of tying business in a harder knot

than just now and keep it alive at all. Wholesalers are so thoroughly disgusted and discouraged over the situation that they are calling in their men and devoting all their surplus energy to getting some movement of lumber which has been ordered or perhaps started on the road. The new year has opened up with a fair amount of hardwood inquiry. This comes largely from the big manufacturing plants and industrial concerns which are forced to build to keep up with the unusual demand for their products. The railroad inquiry is not very satisfactory. Retailers have not started to buy, and although their stocks are low, little is expected from this source until spring business is duly started.

◀ BOSTON ▶

Trade in this section is active in anything that can be delivered, and local stocks are in demand at fancy prices. Quotations from mills are also very high, although many orders could be placed in spite of the asking prices if it were not for the inability to ship. As matters stand now, incoming material is practically suspended. The present and future effect of this stoppage varies with the different classes of industry and, so far as domestic or general usage is concerned, is approaching a stage of vital concern to the trade.

◀ BALTIMORE ▶

With cold weather of unprecedented severity and the deepest snow on record, the lumber trade of this city and section has faced difficulties such as have never before confronted it, and which alone would have sufficed to narrow the movement greatly. Combined, as these conditions have been, with a general freight embargo on railroads, with lack of cars, with scarcity of labor and other drawbacks, the obstacles in the way of doing business have proved almost unsurmountable, and the aggregate of transactions has been held down to very small proportions. In a way, many hardwood men are out of it. Here and there it has been possible to take care of the wants of consumers by sending out lumber by auto truck, but wherever this means of making delivery could not be utilized, the dealers have been able to do practically nothing. While the hardwood business is less affected by the possibility that the government may step in and commandeer stocks needed to take care of private wants, the military authorities confining themselves largely to the soft woods, the blockade on the railroads affects this division of the lumber trade as well as all others, and the opportunities for making shipment are now greatly narrowed. Local yards have been drawing upon their stocks in some volume, and assortments are reduced, with the prospect of making good such withdrawals not at all promising; for the climatic conditions have affected the mills fully as much as the dealers. Lumbering organizations have had to suspend work either on account of deep snow or low temperatures, or both, and the production has fallen to narrow limits. To what extent this enforced idleness will result in the dispersal of organizations remains to be seen; but all the indications point to a greatly lessened production for months to come, so that it is likely to be difficult to take care of the actual wants which may develop. Under these circumstances it is only natural that the range of prices on the orders filled should be very high. In fact, the seller able to make shipment can command virtually his own figures, many wants being very urgent. In addition to the normal requirements low-grade hardwoods are freely sought by the box makers, who are in the market for anything that may serve their purposes. These box makers have many orders in hand, and they have had to contend with freight blockades on railroads, with mills cut off from navigation by heavy ice in the bay and river, so that vessels were unable to move, and with every other sort of impediment, and they are almost desperate in consequence of the lack of rough lumber. This has served to intensify the situation, so far as the hardwood users are concerned, and for the present there is no prospect of relief. Anything in the way of lumber is freely taken when there is a chance of filling the order, and numerous consumers are brought almost to a stop owing to the failure of supplies.

◀ COLUMBUS ▶

The hardwood trade in Ohio territory continues rather active. Taking in account the fact that transportation facilities are congested, there is more activity than might be expected. Buying is about equally divided between dealers and manufacturing plants. Concerns making boxes and implements are the best customers among factories. Furniture factories are now coming into the market after rather successful shows.

Retail stocks are only fair and in some sections reports show some shortage, especially in certain items. Some dealers are rather anxious to increase their stocks in view of expected business after the winter breaks. While building conditions are not very promising, it is believed that there will be considerable construction work along certain lines. Rural dealers are especially anxious to increase stocks.

One of the worst features is the slow deliveries, which makes it a difficult matter to transact business. It takes from one to two months to get shipments through, that is if the conditions are the most favorable. Some dealers are loath to place orders without assurance of prompt transportation service. Collections are generally good, as money continues easy.

Quartered oak is in good demand and prices at the Ohio river continue unchanged from a fortnight ago. The same is true of plain oak stocks, especially white oak. There is a steady demand for chestnut. Poplar is moving well, especially the lower grades. Ash and basswood are unchanged.

November
 9th,
 1915.

Paepcke Leicht Lbr. Co.,
 Chicago,
 Ill.

Gentlemen:-

We are using your Red Gum lumber in the manufacture of our high class interior trim and general planing mill work.

This gum is giving excellent satisfaction, being highly graded, soft texture, good widths, and long lengths, also dry, straight and flat.

Respectfully,
 Harris, McHenry & Baker Co.

Dict.
 REK/LG.

Of course it is true that

Red Gum

is America's finest cabinet wood—but

Just as a poor cook will spoil the choicest viands while the experienced chef will turn them into prized delicacies, so it is true that

The inherently superior qualities of Red Gum can be brought out only by proper handling

When you buy this wood, as when you buy a new machine, you want to feel that you have reason for believing it will be just as represented.

We claim genuine superiority for our Gum. The proof that you can have confidence in this claim is shown by the letter reproduced herewith.

Your interests demand that you remember this proof of our ability to preserve the wonderful qualities of the wood when you again want RED GUM.

Band Mills: Helena and Blytheville, Ark.; Greenville, Miss.

< CLEVELAND >

Firmer position of all hardwoods is noted as improvement in receipts fails to materialize. While the outlet, owing to the severely cold weather here, is limited, even for this time of year, there is not enough to make yards feel sure they can replenish, and consequently prices are firmly maintained on all descriptions. Relief from this stringency, due directly to the poor railroad facilities, is expected when the government gets really busy on its control of the freight situation. Up to the present there has been no perceptible improvement in this situation in the district. The principal outlet for hardwoods at present is in the several big munitions plants going up in Cleveland, Akron and Alliance. These are consuming large quantities of all materials, in hardwoods, principally oak and maple flooring, as well as some cypress for exterior trim. If anything these two items are stronger in the last fortnight, although not actually higher. Outlet for hardwoods in small house construction, ordinarily the best outlet, is practically nil at present, as the severely cold weather of the last two months has brought carpentering work to a standstill. Consequently there is only a limited demand, if any, from the yard point of view.

< INDIANAPOLIS >

The hardwood trade continues to face many unsettled business conditions, with the result that the market is unsteady, although prices are well maintained. The slow movement of traffic, if it may be said to be moving at all, is the chief difficulty being faced by the trade, and it is said quite generally that little improvement is being shown in these conditions. The common carriers in Indiana have been so busy transporting coal to relieve actual suffering that the railroads have had no opportunity to devote attention to the movement of many classes of freight.

Most of the business is confined to contracts for war orders, or in filling the needs of sub-contractors. This business is growing steadily, and the hardwood interests now feel that the demand is to be heavy enough to more than make up for the loss of business that comes through the customary channels. The Indianapolis Chamber of Commerce, which maintains a war bureau in Washington, has just announced that contracts amounting to many millions of dollars have been signed with firms in central Indiana, and that a large part of these contracts will bring business directly to the lumber interests.

Because of the unsettled business conditions, many of the large consuming plants are not buying steadily, and many other plants have been compelled to suspend operations temporarily as a result of a fuel shortage. There is less activity in furniture circles than there has been for years.

Prices remain steady. Box-making materials are in excellent demand, and heavy stocks of walnut also are in demand. Heavy oak stocks for manufacturing purposes find a ready market. The building trades are very inactive.

< EVANSVILLE >

Hardwood lumber manufacturers in Evansville and southern Indiana report trade rather dull for the past two or three weeks, owing to the bad weather conditions, the heavy snows and ice, and the freeze-up of the various rivers in this section. The car shortage and freight embargoes also have played havoc with the lumber interests and little or no improvement is looked for until after the weather has moderated. Few if any of the hardwood mills in southwestern Indiana have been operated during the past few weeks. The tie-up has been the most severe that the lumber manufacturers of this section have known for many years. The Ohio river and its tributaries have been frozen over and steamboats have been unable to operate at all. Railroads have not been able to maintain anything like regular schedules and freight embargoes have greatly handicapped the lumbermen and manufacturers. Logs are slow in coming in and little improvement is expected before thawing weather. Few if any of the large lumber consuming factories of Evansville have been able to run on full time during the bad weather. Box factories are unusually busy, having been working on war orders for several months. Collections are good considering the times. There is still a good demand for the various kinds of timber that the federal government wants in the building of war materials. Shipments are uncertain.

< MEMPHIS >

The hardwood market continues quite firm because there is a large inquiry and because production remains on a very unsatisfactory basis. There have been a few times when lumbermen have found such a strong or such a general demand for their output and, by the same token, there have been comparatively few instances when hardwood production has been so restricted for such a long period as two months. Orders are being received from private users of hardwood lumber and they are also coming from the manufacturers of wagons, wheels, boxes, handles and other commodities who have taken government contracts therefor. Thus the average member of the trade is far less concerned about selling what he has to offer than about shipping the stock or producing the stock after sales have been made. Shipping conditions are showing very little improvement because of the prevalence of embargoes, though lumbermen are hopeful that the efforts now being put forth to get cotton moved away in time

buy the

The "HOOSIER," the rip saw which makes profitable dimension manufacture and grade refining at the mill possible. Hundreds of users already—you will be another if you will let us tell you all about it—Will you?

Hoosier Self Feed Rip Saw. This machine has earned thousands of dollars for owners in the manufacture of dimension lumber, crating, etc., because its entirely novel design, resulting in surprising ease of operation and adaptability, makes possible a profit where a loss is often expected in this work. The

Hoosier Self-Feed Rip Saw

has a positive and powerful feed which handles the heaviest material the sawmill takes just as readily as the lightest.

The table, raised and lowered with the crank in front of the machine, is always level—always securely locked.

The Hoosier rips anything up to 6 inches thick and 17 inches wide. It feeds 35, 75, 100 or 150 feet a minute.

Manufactured exclusively by

The SINKER-DAVIS COMPANY
INDIANAPOLIS, INDIANA

be exerted in behalf of lumber. Deliveries of the latter into eastern trunk-line territory during the past three months has been almost nil, and scarcely a foot can be moved there now. Prices are firm with every promise of remaining so, because of the admittedly strange relations between supply and demand.

← NASHVILLE →

Hardwood lumber trade in the Nashville market has been greatly hampered for the past two months by extremely cold weather, mills having operated under great difficulties. The transportation situation has been the next important factor, it being possible to handle only a small proportion of business on account of embargoes and congestion in the eastern sections of the country. Nashville manufacturers were hoping to make a better record in February. The prices have been steady, and there is a good demand for all kinds of hardwood, with brisk calls for poplar, ash, hickory and oak. Government business is a very important item, and shipments on goods destined to government contractors have been given the right of way on the railroads where this has been possible. The box business has been of heavy volume, due to the generally increased volume of business in many lines. The larger business at Nashville is reflected by an increase of over 40 per cent. in bank clearings in January. The general building situation continues quiet, but it is expected to take on renewed activity within the next sixty days, as the government is to erect a powder plant at Nashville to cost \$60,000,000, construction to begin at once. The DuPont Engineering Company is reported to have been awarded the contract to look after the building of the plant, having perfected the plans. It is estimated that the population of the city will be increased over 50,000 the next six months. There will be some large contracts for lumber, but it is expected that pine men will get a large proportion of these. Cumberland river is higher than it has been since 1890, and the present tide will bring a supply of logs to Nashville, but it is expected that the quantity will be far below the normal on account of the war having drawn many log men into the army and other occupations.

← LOUISVILLE →

There is an excellent demand for hardwood for government requirements, as well as for commercial uses. Commercial orders are coming in fast, at prices above normal, and indications are that there is plenty of business in sight when traffic conditions reach a normal stage. Thick oak is in big demand. Poplar and poplar box boards, wide, thick ash, gum, etc., are in good call, while walnut is in big demand for government work. Mahogany is very active. Veneer mills are working to capacity. The cabinet and furniture trade is in need of numerous grades, but this

demand is not so active as it should be under better conditions. Truck and wagon manufacturers are buying liberally, and are willing to pay over the market for immediate delivery, which is impossible in many districts. Prices are high and advancing, but it is a hard matter to get a proper line on prices, as much of the demand is for immediate requirement stuff, where price is not much of an object. In low grades of gum, poplar, etc., the market is being kept fairly well cleaned up by the box manufacturers, who have been buying freely to fill heavy commercial and government orders. The building trades are generally slow, and have been much slower than usual this season on account of the unprecedented bad weather in the South, which has held all work in check. However, the outlook for building is much better than it was at this time last year, and the trade is in hope of seeing an improvement. Collections are fairly good, all things considered, while money apparently is sufficient for all requirements. Production is being held up somewhat by the shortage of logs, due to car shortage, weather conditions, and shortage of labor, and this may boost prices still further.

← MILWAUKEE →

Sawmills in northern Wisconsin are experiencing a busy sawing season, due to the enormous demand for lumber of all kinds, particularly hardwoods for airplane parts and other war materials. The loggers in the district have been experiencing nearly ideal conditions and are able to furnish the mills with an ample supply of logs to maintain practically capacity operations. The snowfall in the northern hardwood belt was considerably less than in the territory further south in the Middle West and extreme temperatures have made log hauling a simpler task than in most years. The car shortage, however, continues to hamper the movement not only of logs to mills, but of manufactured lumber from mills to consumers. A general use of steam log haulers has compensated to a considerable extent for the lack of railroad facilities among mills that are not at too great a distance from the camps.

The demand for lumber has shown acceleration rather than slackening during the last two weeks, and with the greatly increased cost of production and a supply that is not equal to requirements, prices of all hardwoods are firm, with upward tendency. Advances are being made gradually, as the experience of manufacturers proves sharp rises in costs all along the line. The net advance thus far, however, is believed to be considerably below the net advance in costs, and leading men in the industry are of the opinion that selling prices must go considerably higher if they would avoid a loss in operation. Logging costs, especially, have risen enormously, and this factor is just coming to be directly reflected and will have to be compensated for sooner or later in advanced selling prices.

No sales department necessary to sell capacity of 4,000 wagons per year, within two hundred miles of plant. Would sell at an unheard of bargain. Investigate. FORT WORTH WAGON MFG. CO., Ft. Worth, Texas.

MISCELLANEOUS**FOR SALE**

At public auction on February 25, 1918, at 10:00 A. M. at the factory, the plant of the Knoxville Veneer Company, including land, buildings, machinery and equipment.

About two acres of land, located in Lonsdale Addition of Knoxville, Tennessee, between the L. & N. and Southern Railway tracks, with private siding from each, and which is the main factory building, being a one-story frame building with basement, aggregating 40,000 feet floor space. There is adjoining a brick boiler and engine house, also a 60 ft. progressive lumber dry kiln.

Two lots, 50'x132', each across the street from the main plant, on which stands the one story frame warehouse building 73'x132'.

The main items of equipment being:

1 Russ 40" single surfacer;

1—150 H. P. Greenwald slow speed engine; 500 glue clamps;

1—150 H. P. Chandler & Taylor return tubular boiler;

1 Brownell water heater;

1—50 H. P. Atlas automatic engine;

1—12' Capital slicer;

1—12' Capital Grinder;

2 Capital veneer lathes;

250 factory trucks;

5 Capital veneer clippers;

3 Beach double cutoff saws;

1—H. B. Smith 42" triple drum sander;

1—66" twin screw veneer press;

1 Wheland 15M capacity

200 Francis single beam retainer clamps, complete with I beam;

1 No. 212 Berlin 76" glue jointer;

1 Dennis taping machine

1 Yates No. 213 continuous feed glue jointer;

2 Yates G-2 self-feed rip saws.

Sundry other equipment and small tools too numerous to mention.

Sales will be made free of all encumbrance for cash in hand, to the highest bidder, and subject to the confirmation of the court.

NORTHERN MANUFACTURERS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany & Qtd.-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

We Offer for Prompt Shipment

ATKINS ALWAYS AHEAD

Increase Production REDUCE COSTS

Silver Steel

CIRCULAR SAWS

Atkins Circular Saws stay sharp longest, file easily and render dependable service. This is due to the toughness of SILVER STEEL, a carefully prescribed heat treatment and scientific smithing by skilled Artisans.

ATKINS SAWS are built to serve. They satisfy in every respect and are backed in their service by Atkins Guarantee of satisfaction.

Complete Catalog on Request.

The ceaseless drive of war-time production has thrown heavy burdens on Saw Mill Equipment. Saws and machinery now must be hard driven to meet the large demand.

ATKINS SILVER STEEL SAWS contain the dominant Quality that makes them stand up where all others fail. Today this reliability is appreciated more than ever before. Atkins Saws can be readily procured from our well-equipped Branch Houses and Agencies.

ATKINS Drag Saws

Atkins Drags increase the usefulness of these wonderful machines and minimize the expense of constant attention and filing.

Quicker cuts with less fuel follow naturally when Atkins Drags get on the job. Order them at once and let the test prove the rest.

GRAND RAPIDS VAPOR DRY KILN

GRAND RAPIDS
MICHIGAN

GUARANTEES

There is a difference in them — not alone in wording and salesmanship, but in intent, in actual service and in ability to perform.

The Grand Rapids Vapor Kiln guarantee is based on a scientific measurement; it is original and the result of our thirty years' experience in wood-working.

We know the difference between ordinary kiln operation and ordinary guarantees, and we know you do want dependable guarantees based on real service and tests.

THE GOLDEN RULE

Michigan Hardwoods *Cadillac Quality*

Nature has been generous in supplying Cadillac an abundant supply of superior timber and we are supplementing her work with the best methods of manufacture.

This has made Cadillac Quality famous.

Good timber, lumber well manufactured and seasoned, grades that are reliable and not blended to meet price competition, punctual service; — these are the elements of Cadillac Quality.

We sell direct to responsible dealers and manufacturers.

DIMENSION STOCK Mahogany and Walnut

Aside from our production of lumber and veneers—We are manufacturing kiln-dried mahogany and walnut dimension stock at the rate of 2,000,000 feet annually, and this department has been steadily growing since 1902. We think that these simple facts make detailed argument unnecessary—as to our prices, quality of our stock, and promptness of service.

However, we have ready for mailing a circular which explains in detail how and why you can save time, money and trouble—through our dimension stock.

But if you don't care for the circular, and if you realize what an expensive luxury your waste pile is, send us your cutting bills, as you would give them to your stock-cutters. We will quote a specific price for each style you manufacture.

Sardis, Miss.
Kiln Dried Stocks a Specialty
Manufacturer

The hardness of oaks vary as much as 50 per cent when they are compared among themselves, and there is no less difference among different species when their strength is under consideration.

TRY KNOXVILLE TENNESSEE

You can logically do so because you must ultimately depend more and more on this region for your hardwoods.

No higher type of timber can grow than that abounding in eastern Tennessee. It is found on a soil and in an environment which put quality in the trees generations ago. It is our task merely to see that this quality is utilized to the utmost in making the boards you buy. The best of equipment and highly trained organizations working in one place for years at a stretch make that task easy.

Then too you can be sure of getting the best possible service—always.

Ask about it from any of the following:

The Vestal Lumber & Mfg. Co., Knoxville, Tenn., & Fonde, Ky.

The J. M. Logan Lumber Company, Knoxville, Tenn.

The Little River Lumber Company, Townsend, Tenn.

The Babcock Lumber & Land Company, Marysville, Tenn.

(Main Office: Pittsburgh, Pa.)

TENNESSEE

THE WONDER CITY OF HARDWOOD PRODUCTION

Agricultural Implements

When farmers made their own tools, a few generations ago, they procured the best wood within their reach. They knew the value of good wood, and when they selected it for their own use, they would take nothing that was not the best procurable. In the hardwood region the farmer seldom found it necessary to go beyond the borders of his own land to get what he wanted. He wanted oak beams and oak handles for his plows; ash handles for his rakes, hoes, shovels and pitchforks; locust, persimmon, hickory, or maple teeth for his horserake; dogwood, ash, sourwood, service, hickory for his scythe snath; ash or hickory flail handles and black gum or some other of the gums for flail swapes. When he had made all these tools he was about through with the list. Except the plow and the horserake, tools were seldom made for power other than the elbow grease applied by the farmer himself or his hired man.

Those were the days when farming was done on a small scale. Railroads were not in existence, or at least were few and short. There was no inducement for the farmer to raise more than he could use or sell in his neighborhood. Transportation was slow and expensive, and every farmer looked out for himself the best he could and seldom formed associations with his neighbors for mutual benefit.

A New Book for the Forester and Lumberman

The Essentials of American Timber Law

By J. P. KINNEY, A. B. LL. B., M. F.

Every chapter in this book contains information that will prove of inestimable value to any one who desires to ascertain easily and quickly the fundamentals of American timber law, or who needs references to court decisions to support a well-founded view as to the law upon any particular point. It includes:

Classifications of Property. Forms of Private Profession of Land and Incidents Thereof. Trees and Timber as Property. Statutory Civil Liability for Timber Trespass. Injury to Growing Trees as a Criminal Offense. Contracts Regarding Growing Timber. Contracts Regarding the Preparation and Manufacture of Timber Products. Contracts for the Sale of Timber Products. Trees on a Boundary Line or in a Highway. The Policy of the National Government in Regard to the Free Use of Timber Taken from Public Lands.

Send for your copy of this book today. You will find it a valuable guide in your work.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

Review and Outlook

General Market Conditions

THERE IS A MEAN POINT between war business and commercial business that is being approached, and the hardwood trade in the process of nearing that point brings out many conflicting and confusing indications which render it extremely hard for anyone to come to a clean-cut analysis of the market situation. When that point of balance has arrived it will be possible to at least approximately determine the probable course of events for the duration of war. Fortunately, the balance between supply and demand is still the market barometer. Thus, by analyzing such evidence of the condition of each it is possible to come to a pretty fair understanding of what the true outlook is.

So far as hardwoods are concerned, supply continues to be inadequate. It must be understood, of course, that in speaking of supply the entire stock of hardwoods and not the stock in any one wood is in mind. If other things had not influenced supply, the physical limitations imposed upon manufacturers would have been sufficient in themselves to hold production below consuming figures. This publication has during recent months repeatedly pointed to influences making for greater and greater difficulty in manufacturing. The effect of these retarding conditions has never diminished, and in fact promises now to increase. For instance, in the South the alluring possibilities of the cotton field as awakened by last year's profits from cotton will soon be pulling labor away from the mills and other industries to the plantations. In addition, the wet season of the South will soon strike again into its annihilating course and manufacturing activity will have this additional burden. These are but extraordinary impediments which promise in a region already alarmingly short of labor and discouragingly short of shipping facilities.

It is stated that in the Memphis district the January production was not more than twenty-five per cent of normal capacity. Of course, the burden of never-before-heard-of climatic conditions was in itself largely responsible for that curtailment of output, but on the other hand the conditions which are mostly responsible still obtain, with the promise of becoming even more burdensome. It is plainly evident that by no possible chance can southern hardwood production be kept up to a point sufficient to take care of war requirements and at the same time show more than adequate stocks for commercial purposes.

Northern manufacturers are handicapped mainly by consistent labor troubles, which include not only shortage of labor but a startling decrease in labor efficiency. Manufacturers in the North have gone the limit in making prospective work at the sawmills and the log camps as alluring as possible, but it seems that the

greater the inducements offered the more difficult it becomes to secure and hold sufficient labor to keep operations going. In this section the definite promise is that with the growing use of northern production in government work, there is decreasing chance of having full supplies of hardwoods to handle commercial needs.

If no other evidence of scarcity of stocks and prospects for continued scarcity were obtainable, the fact that prices in practically every item are continuing to hold up and show further advances would be enough in itself.

The lumber trade as a general thing is anticipating the movement of great quantities of lumber into building during the coming months. Of course, the building situation as it exists at present is generally understood to be very far from normal. It is not likely either that building commonly done on municipal permits will get back to anywhere near the point of normal activity. However, not only is there a growing movement in behalf of building resumption, but there seems to be an awakening realization that provision for more housing facilities comes, at present, under the head of necessities rather than luxuries or speculation. Obviously speculative or unnecessary building should and will be held down rigidly, but the population of large and small cities and towns is growing rapidly, due to many causes, chief of which is the vast increase in manufacturing, necessitating centralizing movement of labor and other help. The result is that in practically all centers of population, supply of housing facilities is way below the necessities of present demand.

But the biggest hope lies in farming communities. Arguments that farmers will spend millions for new construction just as soon as weather permits seem to be well supported. Such general agitation along building lines in agricultural circles is not necessarily of a spontaneous nature, but comes rather as a culmination of several years of increasing realization by the farmer that isolation does not necessarily compel him to live without necessities, comforts and luxuries. With his closer communion with circles beyond his own, the farmer has come gradually to realize the advantages of such things and he and his family have become educated to the point where they have made definite plans in that direction. They have been biding their time in anticipation of having financial resources to put their plans into effect. No one will argue that the farmer is not now well taken care of financially, and the result without doubt is going to be that he will not only go a long way in repairing present structures but in many places he will replace them with new or will add entirely new construction as he finds it necessary or gives promise of convenience to him. The expenditure is not going to stop there, however, but will go to the point where he will make a substantial outlay for luxuries or at least for con-

veniences and things which he might possibly do without. He is not only going to buy these luxuries but he is going to use them.

Along these lines consider the statement occurring elsewhere in this issue showing the tendency of demand for pianos in Canada. The large part of this demand is from farming communities. The Canadian analysis shows that the oak case has been the thing during the past year and will so continue during the present year, the reason being that oak can be finished so that under the more rigorous uses to which it will be subjected in the farmer's home and in the home of labor it will not mar so readily as would the darker woods finished with higher polish.

Then consider that the walnut and mahogany people are actively engaged in co-operation with the government to the end that all government needs may be adequately taken care of. The biggest obstacle in the way of this patriotic accomplishment has been the necessary production of great quantities of commercial stuff as a necessary incident to the production of stock in these woods suitable for government needs. With government co-operation, the mahogany and walnut manufacturers can go ahead on government requirements without facing the necessity of piling up a large amount of other stock that manufacturing necessities would result in and having to dispose of this stock regardless of markets or demand. In other words, with government protection in this direction, the mahogany and walnut people can meet government needs and at the same time avoid disaster in handling commercial stock incidentally manufactured. Thus there will be no tendency to force the market on these goods. The result is that the markets will continue strong and there will not be a tendency to press the farming and laboring trade with goods which they might not otherwise buy. These markets will be allowed to shape their own natural courses, and as the tendency in rural and laboring circles points toward oak and other domestic woods, the opportunities for oak, particularly in these directions, seem rather assured.

A Boost for Oak

THERE HAS NEVER BEEN a truer or more striking indication of the carrying power involved in the basic merits of oak than found in the editorial in the Canadian Music Trades Journal, a leading musical publication of Canada. As showing the strong position of oak and its favorable prospect, the editorial is distinctly encouraging.

It refers first to the tremendous increase in oak cases for pianos in the Canadian trade last year, emphasizing that very few houses were prepared for the demand, and the call for this class of goods could not be met. The suggestion is that with the prosperity in farming and laboring circles, the piano is becoming more and more a necessary part of the home equipment in families within that sphere. Under such circumstances the piano becomes a component part of the living room furnishings, and so must be finished to withstand more wear and tear than it would be subjected to as a drawing-room or music room accessory. Hence oak cases, which obviously would mar less easily than the more highly polished cases in darker woods seemed to be the logical thing and the demand naturally centered around oak.

The point of the editorial is that the piano trade should mould public opinion or at least be in position to meet public demand. It suggests that as the indication is for continued call for oak cases, the piano manufacturers feature oak cases in their exhibits at the national exhibition to be held in Toronto shortly. This would set the stamp of public approval upon oak cases for the guidance of the public.

The editorial says: "If it is desirable for the trade that oak cases be in demand, then it is up to the trade to exploit them in every legitimate way and not wait for the public to develop its own taste unaided."

Aside from the fact that this editorial indicates a definite popular sympathy for oak in an important market, it suggests that the oak people may themselves have overlooked a bet in not going after this trade more strongly themselves. It would seem that it is

not yet too late to follow up the advantage of initial sympathy for oak, thus making more headway in further increasing the demand for oak piano cases in the Canadian territories. As the family circle in this country is essentially the same as in Canada, the oak people would have the same opportunity for stimulating the sale of oak in piano cases here as in the Canadian markets.

Have they overlooked something in not following up the appeal of serviceability where service counts most, or is such a campaign already a part of the exploitation program?

Building Propaganda Should Be Co-Ordinated

THE LUMBER TRADE has a splendid opportunity to profit by its mistakes of the past. The principal reason why substitutes gained such inroads on lumber is that while there is tremendous potential influence within the lumber trade, this influence was scattered through numerous organizations and was not brought to bear at one point of contact.

Obviously resumption of building is vitally necessary in this country. It is equally apparent that no general resumption of building construction can come without sympathy at Washington with such activity. It is necessary to show Washington that resumption of building is desirable in order to enlist such sympathy, and Washington cannot be shown unless the facts in the case are presented without confusing or complicating circumstances.

Present efforts to revive building are rather scattered. The lumber trade, being most vitally interested, should take upon itself the coördination of efforts toward resumption of building and should make a united appeal to the government to show that renewal of building is desirable from the standpoint not merely of the people having building materials to sell but of the country as a whole.

The National Association of Builders' Exchanges is making an effort in that direction which should be sympathetically received by the lumber and building trades in all other sections having the advancement of the industry at heart.

Talking Instead of Sawing Wood

THE RUSSIANS ARE TOO BUSY talking politics and robbing one another to do much else. Work has practically ceased from center to circumference of that dominion of anarchy. Ordinarily that would not much concern the American lumberman. Little he cares how much the Russians talk or how little they work; but under present peculiar circumstances the situation possesses some interest to American lumber exporters.

Heretofore, northern Russia has carried on a large business in lumber which found a market in England and in most countries of western Europe. That business is now stone dead. The mills are idle, and doubtless many of them have been burned by the very men who formerly made their living by working there. Since they have found "liberty," they never intend to work any more, and they never expect to need the mills.

The people of western Europe who were supplied from that source must hereafter look elsewhere. The war will end soon, and end right, and there will be a call for lumber. We ought to get most of that business. When the submarines shall be piled in Neptune's scrap heap, as they soon will be, and when no more soldiers are to be transported over seas, there will be plenty of ships to carry our trade wherever the market calls, and we will have the lumber ready to ship.

Of course, the Russians will not go on talking, burning property, and jumping one another's land forever. Ultimately, they will return to work, and the lumbermen will get back to the woods; but our lumbermen's opportunity will come between now and that future time. In the meantime we may not only take for ourselves the lumber business which the Russian anarchists threw away, but we can help people in western Europe who will be in urgent need of lumber to meet their needs.

Occurrences at Washington Interesting to Lumbermen

Personal Mention and the Activities of Various Boards and Committees

Hardwood purchases for the army airplanes are reported to have been put in charge of H. K. S. Williams of H. Williams & Sons of New York. One of Mr. Williams' first official acts was to issue a call upon hardwood men for cherry lumber for airplane propellers. He wants it 8" wide and 8' long.

Lieut. E. L. Ryerson, who has held a supervisory position here in connection with hardwood matters under the Signal Corps, has moved with various officials to Cleveland, where army airplane contracts will be handled.

Airplane propeller contracts have been received by the Bailey and Maddox table companies, Jamestown, N. Y.; Hallet & Davis and Hardman & Peck piano companies, Boston and New York, respectively, and the Pacific Sash & Door Company, Los Angeles, Cal.

According to B. P. Salmon of the National Service Bureau of the Wholesale Sash and Door Association, that industry is prepared to take on airplane contracts. It is very much up in the air just now on account of rumors that the production of glass is to be cut in half and the price doubled.

Furniture factories are making a lot of bodies for army wagons and trucks and doing other government war contract work to cost \$10,000,000 or more.

The Signal Corps has modified its specifications for airplane propeller birch lumber. They now provide for National Hardwood Lumber Association inspection, if desired by the producer, and certification of voucher by National inspectors to obtain payment. They also provide that preference shall be given quarter-sawn lumber of selected first and second grade material. Each board must yield one or more laminations, and the waste in each board of the lower grade shall not exceed one-third of the surface measure of the piece.

Under revised paragraph 6 a provision reads "shall not exceed one in 20". In paragraph 8 the provision that more than one lamination may be cut from a board is stricken out. Under paragraph 13 the word "lumber" is struck out in both cases and "lamination" substituted.

A change of great practical importance, it is understood, occurs in paragraph 19, where the following words are stricken out: "less than carload shipments shall be boxed in paper lined crates well protected from the weather."

Yellow poplar in thicknesses from 1½" to 4" is wanted by the British government for airplane construction, according to an intimation received by the Southern Hardwood Emergency Bureau, while the National Hardwood War Service Bureau has been informed that the French aviation officers are experimenting with cypress lumber as airplane material. Rumor in lumber circles here is that all suitable mahogany in the United States may be commandeered by the war department for airplanes.

It is understood that the basswood lumbermen want detailed information as to the quantity of 2½" stock required for army saddletrees, so as to cut accordingly this season.

Relatively small orders for sash and doors have recently been received by the National Service Bureau of the Wholesale Sash and Door Association from the cantonment division of the War Department. A number of southern sash and door manufacturers and millwork firms have organized the Southern Millwork Manufacturers' Emergency Bureau of which Lee Herrell of this city, with offices in the Evans building, is manager. William M. Otis, Columbia, S. C.; P. F. Conway, Danville, Va.; M. E. Dyess, Augusta, Ga.; C. B. Harman, Augusta, Ga., and J. E. Parker, Snow Lumber Co., High Point, N. C., compose the managing committee. This

bureau reports business good with the government and with private contractors.

It is reported that during the past week the Southern Pine Association put over some 15,000,000 feet of government lumber orders, including half of the 2,250,000 feet for a new aviation camp at West Point, Miss., and that it expects to land 17,000,000 feet for the government powder factory at Nashville, Tenn.; that the Georgia-Florida Emergency Bureau is closing up about 10,000,000 feet of government orders, for army construction work in Porto Rico, army cantonments, etc., including 2,250,000 feet for the Americus, Ga., aviation camp; and that the Alabama-Mississippi Bureau got half of the West Point aviation order, besides smaller orders, and expects to share in the Nashville powder plant orders.

Cantonment construction work now under order includes nurses' quarters, hay sheds, and liberty theatres at those camps not yet so equipped. Twelve of these theatres will be built, each 120 by 60 feet.

The postoffice department has entered the field of competition for airplanes. It wants five constructed to carry mail from Washington to New York.

J. H. Bloedel of Seattle has been appointed fir administrator to supervise the production of all fir lumber needed by the shipping board and the Signal Corps. Col. B. P. Disque is practically spruce administrator in the Northwest.

The Navy Department is calling for 48,000 feet of white ash; 500 tamarack knees; 160,000 feet Douglas fir; 25,000 feet sugar pine; 2,000 feet laurel; 9,500 feet white oak; 24,000 feet bending white oak; a number of lots of yellow pine and cypress; 10,000 feet hard maple flooring; 2,000 feet ash boards; 7,000 feet yellow poplar.

E. D. Fletcher and Kenneth Clark have been designated by the Forest Service to gather information at the Madison laboratory as to strength and other qualities of eastern spruce, and to investigate spruce stands in the East and South, with a view to turning up new sources of supply of airplane material for the United States and the allies.

Orders placed with the Southern Pine Bureau in a recent week are reported to have aggregated 19,000,000 feet. The bureau has received an order for 12,000,000 feet longleaf yellow pine timber, etc., from the British government, which material will be released by the shipping board at the rate of 1,000,000 feet per week.

Twenty million feet of lumber is being ordered for the Charleston, W. Va., government powder factory.

Big government construction operations are proposed in the general deficiency appropriation bill, including five government office buildings in the parks here for the war forces of the nation. These will cost \$8,000,000. Five million is proposed for housing government employees here, and Representative Sherley of Kentucky has recommended the building of several concrete hotels containing 1,500 rooms each for the female government clerks.

The house has passed in changed form the senate bill providing \$50,000,000 for housing under the shipping board and it will soon act favorably upon another \$50,000,000 bill to start a comprehensive housing program by the government at shipbuilding and munition towns.

Government building operations are extending even beyond the country. In Porto Rico a cantonment for troops is being built and in San Salvador, Central America, \$60,000 is to be spent for building a concrete legation quarters.

Gen. I. W. Littell, chief of the cantonment division, war department, told the senate investigating committee the cantonment contractors averaged 2 or 3 per cent profit.

Secretary of the Treasury McAdoo is asking for \$4,000,000 for a building on the site of the old Arlington hotel to accommodate several bureaus of his department.

Quartermaster General Goethals recommended and there was put into the deficiency bill authorization for a chain of great army storehouses and warehouses at coast and interior points. Quartermaster buildings of this kind will cost, it is estimated, \$25,000,000 at Bush Terminals, Brooklyn, N. Y.; \$23,000,000 at Norfolk, Va.; \$13,200,000 at Charleston, S. C.; \$9,820,000 at Baltimore; \$12,000,000 at Philadelphia; \$10,700,000 at Boston; \$50,000,000 at interior points; \$2,000,000 at Governor's Island, N. Y.; \$4,600,000 at New-ark, N. J.; besides provision for 1,000,000 of storage space for the army medical corps at New York, Philadelphia, Chicago, St. Louis, San Francisco, Louisville, Washington, Watertown, San Antonio, and Atlanta; also ordnance storage depots and warehouses at Newport News, Charleston, Baltimore, Chicago, Philadelphia, Cleveland, Springfield, Ill., and Massachusetts; Watertown, Boston, San Francisco, Rock Island, Paterson; also signal corps storage at Dayton, Cincinnati, Buffalo and Mineola.

S. M. Vauclain has been appointed by McAdoo as chairman of a committee to recommend standard types of freight cars, some of which will be approved by J. S. Williams, head of the railroad

administration department of finance and purchases, and contracted for in large numbers, probably at lower prices than special orders require. Other members of the committee are W. H. Wooden, J. M. Hansen, N. S. Reader and Olive Runnels.

All imports and exports of wood and wood manufactures have been put under license subject to control by the war trade board by a recent proclamation by President Wilson. Heretofore only exports of walnut, birch and several other hardwood and spruce and certain sizes of yellow pine lumber have required license for export, and there was no license requirement for import of lumber.

Lumber in large quantities will be required for constructing the concrete shipping program upon which the shipping board is embarking. Contracts for four or five concrete ships have been let and the board has experts working on standardized plans for a 3,500-ton concrete ship. Many concrete ships will be built when a satisfactory type is found.

F. L. Sanford of Zona, La., was here recently and invited James Heyworth, chief of the wooden and concrete ship division of the fleet corporation, to attend the launching of a 5,000 ton wooden ship at Orange, Tex., built of smaller timbers than required by the government wooden ship of the Ferris type.

Logging in Memphis Territory

The movement of logs to Memphis is still quite slow despite the fact that the Yazoo & Mississippi Valley road has within the past ten days made two separate and distinct agreements with the lumbermen regarding furnishing cars, as follows:

First: That it would furnish switching service twenty-four hours every day if the lumbermen would agree to unload log cars day or night, including Sundays. This was a purely local proposition.

Second: That it would furnish 100 cars per day for log handling if lumbermen at Memphis and at other points on the road would unload log cars both day and night, including Sunday.

Lumber interests have carried out their part of the agreement faithfully but the railroad has apparently been unable to do its part, with the result that there is a notable scarcity of cars for Memphis and for other points.

The Valley Log Loading Company reports that it loaded 292 cars of logs during the week ending February 16, the best showing it has made in a similar period since last fall. It reports, however, that it loaded only two cars the first day the next week and that on the second day it was necessary to cut out one of its loading machines because there were not enough flat cars to engage all three of them. Thus the situation appears to be worse rather than better although the most brilliant promise has been made within the past few days.

Some manufacturers here are running their plants about half time. A few are running theirs a little more fully but there are others not getting in more than two days out of a week. Thus the average output is rather below than above 50 per cent.

Lumber manufacturers are emphasizing several points with all the ability of which they are capable. They are calling attention to the fact that logs are beginning to deteriorate because of the long time they have lain on the rights of way of the railroads. They are stressing the fact that flood conditions are practically certain, with resultant damage to and possible loss of great quantities of logs. They are emphasizing that the time is rapidly approaching when insect damage must be reckoned with. But they are, above and beyond all, calling attention repeatedly to the fact that the government needs, directly or indirectly, hundreds of millions of feet of hardwood lumber and timbers in the successful prosecution of the war. But the handling of logs to the mills by the public carriers continues slow and this phase of the transportation problem seems, like Tennyson's "Brook" to run on forever.

It transpired several days ago that 41 firms in Memphis and the valley territory have 20,000,000 feet of timber on the right of way of the Yazoo & Mississippi Valley road and it is conservatively estimated that there are some 25,000,000 to 30,000,000 owned by all firms in the delta.

Weather conditions are quite unfavorable for timber cutting and hauling. High temperatures have followed the recent opposite extreme. Snow and ice have disappeared, but terrifically heavy rains have fallen throughout this section recently. But lumber manufacturers continue to manifest far more concern about getting the timber moved which they have already prepared for shipment than about preparing more timber for delivery to the right of way of the railroads.

River mills are faring much better now. The stage of the Mississippi and its tributaries has made it possible for them to put their boats, barges and other craft in operation. As a result a number of mills here and in the valley, which were unable to operate for quite a while because of lack of log supplies incident to the tying up of their transportation facilities, first by low water and then by ice floes, have been able to start up their machinery within the past ten days.

The firms which control their own roads and equipment for handling log supplies occupy a position in marked contrast with their competitors dependent on the public carriers. The former are getting all the logs they want and are, as a rule, operating their plants at capacity. Unfortunately, however, they are in a minority.

The outbound movement of lumber is increasing appreciably. F. B. Larson, assistant secretary of the Southern Hardwood Traffic Association, reports that the Illinois Central has canceled its "hold-back" orders and that it is accepting lumber shipments to all northern points on its lines, including Chicago and Chicago junction points. He further states that the Michigan Central is accepting lumber shipments for all points on its lines in the United States and Canada and that the Erie is accepting lumber cargoes for all points on its lines west of Port Jervis, N. Y. This means that lumber is now being shipped into a considerable portion of eastern trunk line territory, which has been largely closed for a number of weeks. "It looks as if the congestion of freight were beginning to be cleared up," is the way Mr. Larson views the situation at this time.

Memphis Censures Vehicle Makers

Adopts Resolution Charging Unfair Practices in Purchase of Thick Oak for Government Work

The overshadowing feature of the semi-monthly meeting of the Lumbermen's Club of Memphis at the Hotel Gayoso, February 16, was the adoption by this organization of resolutions, prepared and approved in advance by manufacturers of hardwood lumber in the valley states, charging the manufacturers of wagons, vehicles and wheels for the government with endeavoring "to combine in the purchase of the lumber required in their manufacture through an organization called the 'Vehicle Committee,'" and condemning "the action of this vehicle committee in endeavoring to arbitrarily fix the price on our products," and further especially condemning "their action in interfering with contracts already placed by vehicle manufacturers and demanding the cancellation of such contracts."

The entire resolutions, which tell their own story, are given herewith:

WHEREAS, The United States Government has placed orders for large amount of wagons, vehicles and wheels for the purpose of carrying out its war program; and

WHEREAS, In the construction of these supplies large quantities of hardwood lumber are required; and

WHEREAS, The manufacturers of these vehicles and parts have endeavored to combine in the purchase of the lumber required in their manufacture through an organization called the "Vehicle Committee"; and

WHEREAS, We believe this vehicle committee is endeavoring arbitrarily to fix the price on such lumber without regard to the cost at which such material was figured in the price of their finished products to the government, and have in various ways interfered with contracts between the producers of such lumber and certain manufacturers holding some of these government orders; now therefore, be it

RESOLVED, By the Lumbermen's Club of Memphis,

First: That we pledge ourselves, jointly and severally, to do all within our power to produce and supply such material as may be required by our government, either directly or indirectly, in the present emergency; and

Second: That we condemn the action of the vehicle committee in endeavoring arbitrarily to fix the price on our products, and, further, we especially condemn their action in interfering with contracts already placed by vehicle manufacturers with producers of hardwood lumber, and demanding the cancellation of such contracts.

This action on the part of the club brings to the surface a subject which has occupied the attention of hardwood lumber interests here for the past three weeks or more, but which has been discussed in an undertone for fear of premature publicity.

It had its beginning with the cancellation, at the alleged instigation of the vehicle committee, of a contract which involved a tremendous quantity of thick oak which was to be furnished by hardwood manufacturers in Memphis and the valley territory. The name of the firm having this contract and all details in connection therewith are not yet ready for disclosure beyond the fact that the contract for this lumber was actually canceled. There is almost certain to be a rather interesting aftermath to this cancellation, but nothing can be given out for publication in regard thereto until the interests in question have determined upon their course of action.

The cancellation of this contract for hardwood lumber occurred some time ago and this cancellation was really responsible for the efforts of hardwood interests in this and other parts of the country to get together with the vehicle committee, representing manufacturers of wagons, vehicles and wheels for the government. Readers of the *HARDWOOD RECORD* are doubtless familiar with the conferences held in Chicago in which J. W. McClure, chairman of the local committee, co-operating with the Southern Hardwood Emergency Bureau, and other prominent lumbermen from this territory and from other parts of the country, participated. James E. Stark of Memphis made the first trip to Chicago and the larger conferences followed. Mr. McClure and other Memphis lumbermen returned to Memphis several weeks ago and the former made a statement to the local members of the club regarding the outcome of these interchanges. He said in effect that nothing had been accomplished and that it looked as if the lumbermen and the

vehicle manufacturers were further apart at the end than at the beginning of the conferences.

The lumbermen, by way of adjusting the controversy as to prices, made two separate and distinct propositions to the vehicle interests: First: That they were willing to allow the federal trade commission at Washington to determine what were fair and equitable prices on the thick oak needed, and second: That they were willing to accept for their thick oak the prices allowed the vehicle manufacturers by the government to cover the cost of such stock.

Both of these propositions were turned down, and, in connection with the second, it is charged that the vehicle committee even refused to disclose what price the government had allowed to cover the cost of thick oak.

It is also charged that the vehicle interests were attempting to buy thick oak at prices some \$15 per thousand below the current market thereon.

In view of the fact that the conferences in question did not produce results, and in view of the fact that the cancellation of the contracts for lumber made with certain manufacturers in this part of the country still stood, lumber interests believed that the time had come for definite action. There was a meeting in Memphis of representative lumbermen from Memphis and the valley territory on February 15, at which the subject was gone over thoroughly and at which the resolutions adopted by the club were prepared and approved.

The lumbermen here clearly do not believe that the vehicle committee is playing fair, and they strongly resent the alleged interference of this committee not only with respect to fixing prices on an arbitrary basis, but also with respect to causing the cancellation of orders for hardwood lumber, which had been made by a firm which is engaged in the filling of government contracts for vehicles or for vehicle parts. They further believe that the time has come for a show-down, and they have made theirs by instituting these charges and by pledging their willingness to do all within their power, jointly and severally, "to produce and supply such material as may be required by our government, either directly or indirectly, in the present emergency."

The correspondent of *HARDWOOD RECORD* knows the name of the firm which has cancelled contracts for lumber from hardwood manufacturers in this territory, but neither its identity nor its location may be disclosed at this time. Indications are, however, that both may be known at an early date, as lumber interests are determined to bring issues to a head with as little delay as possible.

The club also unanimously approved the following resolutions submitted for a referendum vote by the Chamber of Commerce of the United States:

WHEREAS, The size of Germany's present armament and her militarist attitude have been due to the fact that her government is a military autocracy, not responsible to the German people; and

WHEREAS, The size of the German armament after the war will be the measure of the greatness of the armament forced on all nations; and

WHEREAS, Careful analysis of economic conditions shows that the size of Germany's future armament will fundamentally depend on her after-war receipts of raw materials and profits from her foreign trade; and

WHEREAS, In our opinion, the American people for the purpose of preventing an excessive armament will surely enter into an economic combination against Germany if governmental conditions in Germany make it necessary for self-defense; and

WHEREAS, We believe the American people will not join in discrimination against Germany after the war if the danger of excessive armament has been removed by the fact that the German government has in reality become a responsible instrument controlled by the German people; therefore be it

RESOLVED, That the Chamber of Commerce of the United States earnestly call attention of the business men of Germany to these conditions and urge them also to study this situation and to co-operate to the end that a disastrous economic war may be averted and that a lasting peace may be made certain.

On motion of Earl Palmer, the club, by unanimous vote, placed J. V. Stimson of the J. V. Stimson Hardwood Company in nomination as the candidate of this organization for the presidency of the National Hardwood Lumber Association. Mr. Palmer said that, while Mr. Stimson was present, the latter did not know that this action was to be taken. Mr. Stimson responded briefly, saying that, while he had not sought this or any other office, he very much appreciated the compliment and would do his best to show his appreciation of the honor done him.

President McSweyn announced that, at a conference held during the afternoon between representatives of the Southern Hardwood Traffic Association and Superintendent A. H. Egan of the Yazoo & Mississippi Valley road, the latter had agreed that, if lumbermen at Memphis and elsewhere throughout the valley territory would unload log cars day or night without any delay whatever, the road would furnish 100 cars per day for handling logs to the mills. This conference was an aftermath to that held about a week ago when the lumbermen agreed to unload cars night and day, and when the management of the road in question agreed, in turn, to furnish switching service 24 hours every day. The results were not what were expected, so the above conference was held. Reports showed that 41 manufacturing firms had 20,000,000 feet of logs on the right of way of the Yazoo & Mississippi Valley road awaiting loading, and Mr. McSweyn stated that the new arrange-

ment would increase log receipts by about 200 cars per week over the more recent average.

Four new members were elected, as follows: bringing the total to 1895: T. S. Taylor, Taylor Brothers, Lunsford, Ark.; J. H. Schlosser, Forrest City Box Company, Forrest City, Ark.; B. McMullen, McMullen & Powell, Chicago, and T. C. Thorn, Forest Products Chemical Company, Memphis. One new application was filed.

J. H. Hines, chairman of the law and insurance committee, called attention of the members to the fact that it had been necessary, since September 8 last, for the seller to place revenue stamps to the extent of \$1 per \$1,000 for the entire amount involved in land transactions, without regard to cash or deferred payments, and urged them to look closely into whether or not this law had been complied with, since failure to comply therewith seriously affected titles to such lands.

The house committee requested that members report the quantity of lumber bought or sold through the exchange boards maintained in the rooms of the club in order that it might be ascertained whether or not this service is worth while.

There were eighty-three members present at this meeting, making it one of the most largely attended, for a regular luncheon, in the history of this organization. President J. F. McSweyn occupied the chair.

The Sawdust Trail

Inasmuch as some critic, competitor, or even friend may accuse us of plagiarism in using Billy Sunday's well known route to heaven at his meetings, the writer wishes to go on record and state that he used this heading twenty-eight years ago when he first visited the Southland, and claims priority patent.

While in New York recently I had a visit with C. S. Powell of the Powell Lumber Company with offices in the Wilson building, and operating a custom planing mill at Portsmouth, Va. He has been operating this plant for several years and it certainly has been beneficial not only to the Powell company in handling its export trade, but to others who ship through the port of Norfolk. The company has an electrically equipped planing mill and recently added a new band resaw and is equipped to take care of a good bunch of stuff every day. It is of the opinion that after the war the export trade will be much greater than ever before in history and so is prepared to do a large custom business as well as assist other manufacturers in furnishing the European market with exactly what it wants. Powell, in speaking of the change in conditions said, "Naturally, as we are able to increase our merchant marine and get a greater number of boats routed all over the world, each line of trade should get busy, and right now, to ascertain what routes will be available, and to plan to handle this trade. They must also consider the new basis of rates, free time, new terms of sale, and other methods that will be employed. The scarcity of money after this war will be such that America has to figure on taking care of a lot of this business by loaning money, and every export organization, whether in effect now or otherwise, should keep this in mind. Both the railroads and the shipping companies will minimize the free times and make other changes that will necessitate yards at the seaboard, not depending on daily delivery through carload shipments that may be on demurrage or come in the day after the ship is loaded.

S. E. Slaymaker of New York is not taking his usual winter vacation in Florida owing to the recent death of his mother at Sunberry, Pa., and also on account of the activities of the various lines in which he is concerned. He is in the best of health, and looks forward to a good demand for spruce, hemlock and hardwoods

from the West Virginia mill, said R. U. Schaefer, manager of the hardwood department.

An operator likened the New York port to a bottle neck, and said he believed there was not over sixty per cent movement, and while the number of cars under demurrage on eastern tracks was being reduced, yet it was almost a miracle that a car is released and put on ship board in some of the big ship yards or munition plants in the East.

Geo. F. Harriman of the Emery Company, commenting on the various values of stock said the purchase of Central American mahogany by the government had also loosened up the receipts of cedar, but had not reduced the value of the logs in the New York market. The facts are that cedar logs are at a premium and it looks as though they will continue so notwithstanding the fact that there is always a certain percentage of cedar that comes out of the same logging operations as mahogany, and if the government is successful in increasing the receipts of mahogany from South America, it will no doubt assist the cedar situation. On account of the short labor supply, the high freight rates, and everything incident to getting out the logs, the value of cedar is probably 100 per cent higher than it has been in his time.

F. C. Leary, sales manager of the I. T. Williams & Sons Company, one of the aggressive Chicagoans in the East who has made good, in speaking of business said that the government's use of airplane stock had certainly reached that point where the mahogany manufacturers had to be called in to help work out the problem, and that Uncle Sam was just about to commandeer the whole proposition, and put on his own boats in order to get enough lumber to cover his needs. This would naturally produce the amount of stock needed for furniture and the interior trades. He was very much interested in the plan suggested by HARDWOOD RECORD that a serial story be run illustrating the various kinds of mahogany and their utilization for particular purposes, and concurring in this suggestion, the serial story will start in an early issue of the paper, taking up the four classes of mahogany, viz.: Central American, African, Mexican and West Indian. It not only will be beneficial

to the whole mahogany trade, but will be suggestive to the consumers.

R. S. Huddleson of the Huddleson-Moore Mahogany Company in speaking of the difficulties that have made trouble in the past for mahogany importers, mentioned the investment of vast sums of money advanced to logging contractors in the tropics and wherever mahogany grows, and the desirability of checking the contracts and the investments in this field, as, if not carefully watched, some smart logger will have enough money in his own bank to eat up all the profits out of five years' business.

In commenting on the experiences of the past he felt it was a crime that the mahogany operators had not been in closer touch with each other and a more harmonious spirit shown, for many a dollar had been lost because of the inability to keep a close enough tab on costs and other matters connected with the business.

F. L. Hagen, manager of the domestic lumber department of the I. T. Williams & Sons Company, stated that orders were plentiful enough, but there was difficulty in getting stock from the mills and forests which makes it almost impossible to keep up stock, and the trials of the wholesaler and consumer from a delivery standpoint were almost beyond human ability to help things along. However, the taking over of the railroads by the government may assist the situation. Of course while it is necessary to assist the government in every way possible—and no business man desires to prevent this effort—still the commercial interests of the country need more assistance from the railroads than they have had for the two years.

Andrew T. Knox of the L. E. Moore Stave Company, 11 Broadway, New York, was a busy young man last year endeavoring to get into the shipping room lumber and staves which had been contracted for previously. A. T. says that the embargoes have almost ruined most people. "We keep cars coming in from all sections all the time, and some that were supposed to be delivered last fall have not arrived yet. The demurrage rule, calling for a penalty of \$5 per day over the regular time, runs up into money, but often you can afford to pay the high price of lighterage and relieve yourself of the increased cost of demurrage."

W. K. Knox, president of the company recently returned to New York from a two weeks' trip to the offices and mills at New Orleans, Greenville, Mobile, Savannah, and other southern operations.

C. R. Mengel and J. C. Wickliff of the C. C. Mengel & Bro. Company at Louisville, have spent several weeks in the East in connection with association work in the mahogany trade. Like other operators, they are very much enthused over the co-operative efforts being worked out between mahogany operators and the government. Speaking of the consumption of mahogany lumber, Mr. Mengel stated that the increased needs of the government would probably make it troublesome to take care of the various demands from a domestic standpoint, but the operators are going to do their best to give industries using mahogany the best service possible and they are co-operating with each other to that end.

Charles Dudley of the Dudley Lumber Company, Memphis, dropped into Chicago last week enroute to the North. He was in his happiest frame of mind, and even though it was almost impossible to handle material during the past few weeks, his company had made some very good shipments, and given the government priority on most of its material.

Geo. F. Kerns of the Geo. F. Kerns Lumber Company, Chicago, in talking about shipments of hardwoods, remarked recently that on his desk that day were invoices and bills of lading for twenty cars of material. The embargoes made it very hard to carry out even government orders, notwithstanding the fact that he has material on the yard, and to get a car, have it loaded, start it moving seven miles a day, and then have it mixed up with an embargo, certainly made delivery a trying proposition for every man in the business.

Payson Smith of the Payson Smith Lumber Company, Minneapolis, who attended the Indiana meeting, certainly demonstrated that he is a spellbinder as an orator, and his renewal of old acquaintances made a happy event of his life in attending the meeting. He said the firm was very active, and everything was all set to fill an order, the real problem being making deliveries.

R. M. Carrier of Sardis, Miss., accompanied by Mrs. Carrier, and Lew Doster of Atkins' fame, spent a couple of weeks during January and February with his father, Cash Carrier who is building a railroad in Florida. Believe me all the parties concerned had a jolly good time. The ex-hemlock manufacturer of Buffalo, Florida timberland owner and railroad builder, made things so happy for the visitors that they wanted to spend the winter. Lew said it was not orders that he wanted so much, yet he had to have them as much as he appreciated the visit, and a broken arm could not keep him from talking saws or acting the part. Carrier attended the hardwood manufacturers' meeting, and reports a good volume of orders, but the same old scarcity of equipment for delivery.

E. H. D.

Change in Food Administration

The campaign to conserve food is nationwide, and the people have responded with splendid spirit. An important change in the manner of carrying on the campaign is forecast in the Weekly Bulletin of February 9. This bulletin represents the press section of the U. S. Food Administration. It is there pointed out that the tendency is to decentralize the work. It is passing from the general government to the different states as rapidly as they organize and make ready to handle the work. Each state will handle food matters within its own borders, subject only to general supervision by the government. Each state is expected to organize its counties.

"On With Business"

The Hardwood Manufacturers' Association of the United States does well to reproduce in its February 18 bulletin a letter it received from R. H. Sexton of the "Build a House Exposition," Grand Central Palace, New York City. The letter has to do with the importance of sustained national production and contains its own best explanation. The letter, which occupies the front page of the bulletin, follows:

New York, February 1, 1918.

Hardwood Manufacturers' Association of U. S., Cincinnati, O.

Gentlemen: In these strenuous times we all recognize that the chief business of the nation is war, and so first of all let our slogan be "On with the War." Now, while the limelight of publicity is pointing in the direction of the men responsible to the government for the efficient and vigorous prosecution of the war, and they are speeding up the movement, those of us not engaged in more important duties should lend our efforts in behalf of our country and ourselves in the speeding up of business.

We should not let the difficulties of war, transportation, coal, labor, high cost of living, or any other excuse, stay the hand of business. Now that our boys are at the front, there is more reason than ever that those of us at home should provide the means of supporting them. This cannot be done by standing idly by or holding tight. We must move, create and conserve.

In England and Canada they have a slogan "Business as Usual." Everywhere one can see this sign on the factories and shop windows. "Business as Usual" undoubtedly serves its purposes as a cheerful placid slogan, but it does not fit in with the aggressive policy of America. "On With Business" more nearly expresses the energy and aggressiveness in keeping with the spirit of the country.

In vigorously attacking this problem of business, we should produce necessities and suspense with luxuries. We should remember that the housing, feeding and clothing of our people must go on to enable us to provide the sinews of war. Production and conservation should be kept constantly in mind. War must go on, but business must inevitably continue, and it is our patriotic duty to support both.

Chambers of Commerce, Boards of Trade, industrial organizations, newspapers, magazines, motion picture houses everywhere should get behind this movement. Pulpits should resound with the slogan "On With Business." Let us attack the problem with energy. Get rid of apathy! It is not excuses, but results that count.

Will you not do your bit by spreading this gospel, and in this manner hearten the boys at the front and those of us at home whose livelihood and existence depend on the continuation of business?

R. H. SEXTON.

Figured Gum Passes Final Test

THE O. K. Houck Piano Company has met with great success in the FIGURED GUM piano it has had on exhibition for some time.

Several other houses are now making sample cases in FIGURED RED GUM. The Edison phonographs are now shown in this wood. Its use in many other internationally known products has brought public recognition.

The trade would buy YOUR product in FIGURED RED GUM.

We are able to help greatly in your choice of material for sample lines as we are the largest producers; as we keep on hand a stock of logs for filling exceptional orders; as our warehouse contains one million feet of FIGURED RED GUM, sawed and sliced, in all thicknesses.

Our standing as the leading producer bears testimony to the correctness of our methods and equipment, and of the quality of our timber

Mahogany as a Veneer Wood

Sources of the Supply and the Qualities and Amounts Procured

IF THE QUANTITY of veneer produced from various woods is taken as a basis for comparison, mahogany falls below a number of other woods manufactured in the United States. At least nine woods or groups of woods yield veneers in larger quantity. These nine, named in the order of their relative importance, are red gum, yellow pine, maple, cottonwood, yellow poplar, white oak, birch, tupelo, and elm. But, foot for foot, mahogany is more valuable than any of them.

Veneer is of two kinds, considered from the manner of manufacture. One class or kind is rotary cut; the other class is produced by sawing or slicing. All veneers, no matter of what wood they are made, belong in one or the other of these classes, and in that respect mahogany veneer is like all others. The two classes of mahogany veneers are nearly equal in quantity, but apparently the rotary cut slightly exceeds the other kind, but there are no very recent figures showing exact quantities of the two kinds. About 49 per cent of the total output is sawed or sliced, and 51 per cent rotary cut.

Prevailing Thicknesses

Most mahogany veneers are thin. The wood is too valuable for thick stock where thinner will do. That which is rotary cut is mostly reduced to thicknesses of $1/16$, $1/20$, and $1/30$ inch, the relative quantities running in the order here given. The sliced stock is generally a little thinner than the rotary cut, and the relative quantity of each thickness is in the order here named: $1/30$, $1/28$, $1/16$, and $1/20$ inch. Mahogany is not manufactured in as many thicknesses as some other woods; for instance, it is made in only about half as many as red gum.

Most of the mahogany veneer manufactured in this country is produced in the five states, Illinois, New York, Michigan, Kentucky and Indiana. The quantity of production in each of those states is in the order named.

Rather more than half of the mahogany brought to this country is reduced to veneer; the remainder is sawed into lumber. Though a given amount of wood will go farther as veneer, yet the demand for lumber is very strong. A single business block in Chicago used 800,000 feet of one-inch mahogany for interior finish. That is said to be the largest quantity of mahogany ever used in a single building in the world, though the quantity wasted and used in a public building in the island of Haiti must have been nearly as great.

Sources of Mahogany

Some mahogany once grew in southern Florida, and an occasional small tree is still cut there; but the users of this wood in the United States depend wholly upon imports from foreign countries. The two principal sources

of supply are tropical America and West Africa.

All botanists are a unit in saying that no true mahogany grows in Africa. If a strictly scientific definition is insisted on, the botanists are doubtless right, for they arrive at their decisions by examining leaves, flowers, and fruit. But to say that the wood coming from Africa is not mahogany is a good deal like splitting hairs to find differences. There are several kinds or qualities of so-called mahoganies in Africa; and there are also several kinds or qualities in America; and between these varieties there are differences which the ordinary observer can detect by sight alone; there are other differences which the wood-working machines will detect; there are differences in weight—as much as fifty per cent, or more; and there are differences in the minute structure of the woods which a microscope reveals but which the unaided eye cannot detect.

Holding all of these differences in mind, it can be said that, for all practical purposes, some of the African mahoganies can hold their place with any others. The leaves, flowers, and fruit may vary from those of the American species, but the wood will stand up to any practical test that a user may insist on.

The African mahoganies grow near the western coast of that continent, both north and south of the equator. All the trees which are marketed as mahogany in that region are not of the same species. It is not necessary to listen to the disputes of botanists on the subject, for any observer can see that there is as much difference between the woods of the several so-called African mahoganies as there is between the woods of the several kinds of pine in the United States. For that reason, a custom has developed among dealers in African mahogany to designate each kind by naming the region where it grows. That accounts for so many geographical names for African mahogany. Dealers who are familiar with the mahogany business can judge fairly well of a wood's quality from the region where it grew.

Some of the woods now passing as mahogany are clearly something else, and no dealer buys or sells them as mahogany; yet some of them are valuable woods. Among the names of places used in designating African mahogany, the most important are Gaboon, Okume, Coco Beach, Cape Lopez, Lagos, Bathurst, Axim, Grand Bassam, and Assinee. These are names of districts where mahogany grows, or the names of localities on the coast whence shipments are made. The names mean nothing to a person unacquainted with the African mahogany trade; but they mean a great deal to those acquainted with that business.

American Mahogany

Botanists are satisfied that true mahogany grows in

tropical America, and users are satisfied that the wood is genuine mahogany; so there is no dispute. But there are different kinds, classes, or grades of American mahogany. Some botanists insist that there are actually two different species of it, the same as there are different species of oak in this country. That is probably true, but at any rate, there are different qualities of genuine mahogany, and to some extent they depend upon regions of growth. There are Cuban, Santo Domingo, Honduras, and Balize mahoganies. These may all be one and the same species, and the differences may be due to climate and situation, such as altitude on mountains, wet or dry soil, exposure to winds, frequency and abundance of rains, absence or presence of winter frost, and other conditions. Experience has shown that the very finest mahogany comes from certain localities, while the same species growing in another region is not quite so fine. Dealers in this country often advertise that their stock is Cuban, or Honduras, or Panama mahogany. They do this because of the well known fact that those regions produce very fine wood.

The regions which produce mahogany are well known, but their exact boundaries are not always clearly defined. The northern limit of this tree's growth is in southern Florida. Seventy-five years ago considerable quantities of it were cut there. West of south Florida, on the western side of the Gulf, the tree appears on the Mexican coast, and it continues down the coast along southern Mexico, Central America, Panama, and along the northern coast of South America. The tree extends inland from a few miles to a few hundred, and ascends mountains to heights where winter cold sets a barrier against its further extension. The tree is found now, or was once found, in practically all of the larger islands of the West Indies, but particularly in Cuba and Santo Domingo. These two large islands have furnished as fine mahogany as the world ever saw; but their supply is nearly exhausted now.

Valuable Qualities

Many qualities contribute to mahogany's value, but the chief are figure and color. Others are strength, hardness, and weight. It is a strong wood, though several in the United States are stronger. Some people judge a wood's quality and value by its weight, and mahogany meets that test well. Hardness enables a wood to take and retain a fine finish, and in this mahogany is excellent. It is worthy of mention that some of the English dealers in early times discouraged the use of mahogany, because of its hardness and the difficulty of cutting it; but with modern machines and tools that objection has no weight.

Some people suppose that the presence or absence of annual growth rings proves whether or not a wood is genuine mahogany. The rings furnish no such proof. Some mahogany shows clearly-defined rings of growth, other exhibits not the trace of a ring, yet both may be true mahogany and first class wood. The presence or absence of rings depends upon the climate of the place

where the tree grows. If the winter is too cold for trees to do any growing, the wood will show growth rings, as is the case in Florida and in most of the mahogany region of Mexico; but if the trees grow the year round, as in warm regions of the torrid zone, there will be no visible rings of growth.

The figures of mahogany are delicate, artistic, and pleasing; they display none of the boldness of the figures of oak and ash; none of the sharp contrasts of Douglas fir and yellow pine; none of the variety of tones seen in walnut. Usually it is mahogany's color rather than its figure that constitutes its value, though the two are often intimately associated, particularly in sliced veneers.

Mahogany has some defects, but not many, and most of these few are due to accident and are not inherent in the wood. Logs that have been floated in brackish waters in warm countries may be bored by teredoes, limnoria, and other boring insects; but this injury is not common; and some logs, particularly from Africa, may have cross-breaks, a defect of growth which usually escapes notice until the log is in process of converting into lumber or veneer; but this defect is not common. Some mahogany has a grain known as "woolly wood." When cut with a knife or saw, the surface of the wood develops a fuzz which is troublesome to the polisher. Trees of that kind are rare.

When the bad and the good qualities of mahogany are compared, it is found that the bad are few and the good many. It is a wood that knows few changes of fashion. It has held its place during two hundred years against all comers and all rivals; and it is a remarkable fact that the price has not changed much during two hundred years. There is scarcely another commodity in the world's commerce that has fluctuated so little as mahogany in supply, demand, and price. As a standard of value, it stands side by side with gold, so far as its use extends.

Ode to a Cat

Tom-Fuzzy-tail-Me-row, Tom,
When we were first acquaint,
I had bootjacks by the dozen, Tom,
But now you know I haint.

I threw them all to bust your head
But missed, I will allow;
And that is where my bootjacks went;
Not one is left me now.

Tom-Fuzzy-tail-Me-row, Tom,
Your tenor tones are high
At midnight's holy, solemn hour
Beneath the starry sky.
The bootjacks failed to land, Tom,
Upon your classic brow;
For, otherwise, your blasted throat
Would not be trilling now.

H. M.

Nearly all imported woods may be occasionally made into veneer, but those of real importance are mahogany, Spanish cedar, Circassian walnut, satinwood, rosewood and ebony,

Prospective Uses of Minor Tree Species

A Promising Field for the Manufacturer of Various Small Commodities

HERE are many hardwoods in the United States which are known only locally and some of them are scarcely known at all. Some of these possess great beauty of grain and color, and are suitable for a number of minor purposes, and they will doubtless be put to use in the future in a number of ways. Perhaps the manufacturers of veneers and novelties will be the chief agents in providing these woods in form to be put to use, though the general veneer industry, as it is now organized, cannot become much interested in converting these somewhat rare woods into thin slices. Generally, the trees constituting this potential resource are too small for the rotary machine, or even for the ordinary veneer saw or slicer, and for that reason, if much development is even made along this line, it will call for special saws and knives to handle the small logs.

The hardwoods to which reference is here made are commonly classed as minor species, because they have never had much commercial importance. They are scattered all over the country, but the most numerous and most valuable are found in the southern part of the United States from the Mexican boundary to Florida. Of the hundred or more minor species in that region, thirty or forty ought to be worth attention on account of

the finely colored and figured woods. They are not much in the market now, and have never been; but there are possibilities for the future. The woods are suitable for many small articles for which markets already exist; but these articles are now generally made from imported woods, such as boxwood, cocobola, corra, ebony, furze, malacca, partridge, rosewood, satinwood, weitzel, and others.

It is not claimed that American forests have substitutes for all the finely-colored and extra hard imported woods; but there are substitutes for some of them, and the number of satisfactory substitutes cannot be determined offhand. Trials and experiments must be made; but many such experiments have been made on a small scale, with good results.

Some Promising Hardwoods

Florida and Texas have more of these promising minor species than any other two states, but some are found on the Pacific coast, some among the Rocky Mountains and in the plateau region, and others are scattered widely.

Mesquite is abundant and has never been much used in fine work. Trunks are small and short, but the wood compares in color favorably with mahogany, and in grain it bears some resemblance to the heartwood of birch.

WRITE for COMPLETE PRICE LIST

There is no account that it has ever been converted into veneer, and it is so hard that it would severely tax a machine to cut it. It has been cut into lumber of which handsome furniture has been made, and also many small articles in local demand.

Texan ebony, which is not a true ebony, has grain and color similar to mesquite, but the supply is less abundant. Huisache is similar to Texan ebony, and is a Texas product. These woods have been made into cross-ties, which are almost everlasting because of their hardness and immunity to decay. They are fit for higher utilization.

Three other Texas woods, all rather scarce in tree sizes, but all possessing wood of great hardness and rare beauty, are catclaw, devilsclaw, and koeberlinia. If these are to be cut in veneer, the strips must be small, and their use must, on that account, be restricted; but no woods in the world are more beautiful if the choice grains are selected and matched.

There is a bluedwood in Texas, generally known as brazil wood or logwood, that possesses a rare, clear color that is extremely attractive when the wood is highly polished, though rough specimens would likely be passed unnoticed. It is not abundant, but is to be had now and then by ranchers who cut it for fence posts and fuel.

Florida has some finely-colored woods, but large quantities are not found in any one locality. Jamaica dogwood is one such. It is reputed to be so poisonous that its bruised leaves are fatal to fish if the leaves are thrown into the streams, but that detracts nothing from the beauty of the polished wood, which is dark, hard, and heavy.

The mastic tree grows in Florida and has possibilities. The wood is brightly colored and might find many uses but not where large sizes are required. Lancewood is a product of Florida and its value is due to its strength rather than to beauty of color. It cannot be had in large amounts there.

People have never been inclined to give mulberry wood its due. Some of it is occasionally met with in lumber yards, but nobody ever pays much attention to it but treats it as ash or elm or whatever it happens to be piled with. Yet, the color and grain of mulberry are as attractive as many of the foreign woods brought to this country and sold at high price. There are no large stands of mulberry, but trees are scattered over nearly half of the United States and the available quantity of this wood is considerable. Furniture made of mulberry would compare favorably with that made of cherry, though cherry is not a figured wood and mulberry is.

Another finely colored wood which has never received the attention it deserves is swamp bay, a tree of the laurel family, growing in the southeastern part of the United States. It is rather scarce in size large enough for sawing, but the color is rich and the polished wood presents a fine appearance.

Two trees of the rose family deserve consideration with the finest of the minor species. They grow west of the Rocky Mountains, and are never large, and are

Call on our Representative, R. S. WOODBRIDGE, when in Grand Rapids, Mich., Vinkemulder Bldg.

seldom abundant in any locality. They are known respectively as mountain mahogany, valley mahogany, long-tailed mahogany (referring to the shape of the flowers), and featherwood (referring to the figure of the wood).

Other trees of the western part of the country with richly colored wood, akin to huckleberry, are the madronas and the manzanitas. Supplies are pretty abundant in some regions, and occasionally trees of large size are met with.

One of the most finely figured woods of this country, so far as contrast of colors go, is sumac. It is seldom found with trunks large enough to be worked with profit, but very handsome veneers may be cut from trunks from six to ten inches in diameter.

List of Uses

A complete list of uses to which these woods have been or might be put is impracticable, but the following are some of the actual uses which some of these woods have met, and the list might be enlarged and doubtless will be when fuller utilization, both in veneers and novelties, has been worked out: Piano actions, canes, umbrella handles, whip stocks, caster wheels, mallets, steering wheels, knife handles, rulers, scientific instruments, yard sticks, brush backs, parquetry, knobs, small musical instruments, small woodenware, souvenirs, and novelties.

Veneer Plant Burns

The plant of the Strong Veneer Company at Gerry, N. Y., was burned on February 17 with loss of \$30,000; partly insured. The cause of the fire is unknown. The factory was the leading industry of the town and gave employment to fifty men. It was a three-story frame structure and was totally destroyed, together with machinery and stock. The owners will rebuild.

Challenge to Veneer Furniture

The makers of furniture with veneered panels have confidence in the standing qualities of their product, but it may not be definitely known just how much it will stand in the way of tropical climate. A recent report by H. E. Everley, special government trade agent in Colombia, South America, challenges the sufficiency of veneered furniture to stand the climate of that country, and advises shippers in this country not to ship such furniture to that region.

This is a challenge which, it may be taken for granted, will not be let pass without proof. Possibly veneered furniture cannot stand Colombia's climate, but possibly it can; and if it can, there is no reason why manufacturers of such furniture in the United States should abandon efforts to do business in Colombia, on the say so of a trade agent who may be mistaken in what he says.

There are different kinds and qualities of veneered furniture. The poorer kind may fail in a tropical climate, while the best may stand up under the severest tests. Much will depend on the quality of the glue and the efficiency of the method of putting it on. If the glue holds, there is no apparent reason why veneered work should not give service as good as is given by solid wood in similar situations. A good many lugubrious warnings regarding furniture have come out of Colombia and northern South America, first and last. At one time shippers were warned against sending wooden articles of any sort, because white ants would eat them up for breakfast the first morning after arrival. Now the warning is modified a little and the ban is put on veneered furniture only, leaving the presumption that solid furniture will be all right. Nothing is now said about white ants, but it is the climate that is the bugbear.

Maybe these prophets of evil know what they are talking about and maybe they are guessing. At any rate, the man who has reason to believe that he can sell furniture in that region, either solid wood or veneer, should not be scared out before he has made some independent investigations to see what the situation is. If the people there are willing to buy wooden furniture, they should be given a chance to buy it. They are better judges of what will and what will not stand the climate than is the traveler who makes a stay so short that it does not give him an opportunity to become thoroughly acquainted with the situation.

No practical limit to the thinness of veneer has ever been reached. Some claim to have cut it only one-thousandth of an inch thick. Sheets of that thinness are a mere gauze, and perhaps a coarse-grained wood like oak or ash could not be cut so thin, because such a sheet would fall apart and become mere dust. For practical purposes, Spanish cedar is cut in thinner sheets than any other wood, though doubtless there are others which can be reduced to equal thinness.

The veneer maker is one of the most successful wood conservationists, because he wastes so little in the form of sawdust; but this comment does not apply to the sawed veneer.

Nurserymen are large users of veneer as a substitute for paper in wrapping trees and plants for shipment. Water has little effect on veneer, but it speedily ruins paper. In many instances the use of veneer wrapping dispenses with the need of shipping boxes, for the strong wooden sheets protect the stock against bruises and breakage, and it also hinders evaporation from the wet mass employed as packing material.

The Mechanic's Call Has Come

The Shipyards Need the Services of a Quarter of a Million Workers

THE COUNTRY'S CALL has gone out to mechanics to volunteer in the army of shipbuilders that will bridge the Atlantic with vessels and carry the war into the enemy's country. The government has the material, the yards, the machinery, and the money to build 6,000,000 tons of ships a year, and it is calling for workmen to help do the work. A quarter of a million men are wanted, and the call has come to every man who can help. The work in a shipyard is so diversified that every person can be of assistance who can do any kind of carpentering, any kind of metal working, electrical work, wiring, foundry, painting, plumbing. In fact, almost every class of mechanic is wanted.

The Germans have insolently proclaimed that America could not build ships in sufficient numbers to have any effect on the war. These false prophets of the kaiser are in for a rude awakening. It is not the first time they have missed their calculations in this war, and they will miss it again, as they will find out when the string of ships crossing the Atlantic from our shores to Europe shall be so closely packed that the lookouts on the masts will never be out of sight of other ships from one side of the sea to the other.

That is what is going to happen, and you, if you are handy with any kind of tools, are wanted to help do this great work and put the final crimp in Germany.

Those who are actually at work in the ship yards will be exempt from the draft. Instead of going to the trenches, they will do their fighting with hammers and saws, and every blow will go to the mark as quickly and as surely as if it were a bullet fired from a front trench. The workers with tools will back up the soldiers with machine guns.

It is urged, therefore, that mechanics go at once to the nearest enrollment agent of the United States Public Service Reserve of the Labor Department, or to the local enrollment agent of his State Council of Defense, and register themselves as willing to work in the shipyards if needed; then to retain their present positions until called personally for service.

The wages are good, the hours eight a day, and con-

ditions under which the work will be done are as good as circumstances will allow, and vastly better than the soldier expects at the front. In fact, this volunteer army of shipbuilders must render the soldier's condition better by making it possible to keep him supplied with food, clothes, medicine, arms, and ammunition. In this war, all must stand shoulder to shoulder and help, whether wielding a bayonet at the front or a riveting machine in our ship yards.

Men who volunteer for the ship work will be called as needed and will be assigned to the particular work that they are best qualified to do. Each man will be employed in the line which he best understands.

It is believed that we now have half a million fighters in Europe. There will be two million there in due time, if the kaiser and Hindenburg do not bump the ceiling in the meantime. That enormous army needs supplies in vast quantities, and all depends on ships. We shall get the ships, the supplies shall go across, and the war will be won by the patriot in the shop and shipyard as well as by the patriot who touches off the cannon that will speed the kaiser's troops on their homeward hike.

The mechanics who can help build ships should not delay offering their services, for now is the time. The sooner we can

put every ounce of our strength into the blow, the quicker it will all be over. It is reported that the southern pine mills are turning out a million feet of ship timber a day, and the western mills and the northern mills are producing at a speed that was never heard of in the past. The Atlantic will be bridged with ships, and the call has gone forth for help. When Nelson's fleet sailed against the enemy's line at Trafalgar, the admiral's masthead displayed the short and simple reminder: "England expects every man to do his duty." That was sufficient, and victory was complete before the sun went down. A similar call has gone out to the Americans now, and there is no question what the response will be, and that the final result will be like that at Trafalgar. But the response to be most effective must be prompt, for a day lost now means many days and possibly lives lost in the future.

THE MAN OF THE HOUR

They Are Fighting For YOU

FELLOW Lumbermen from the United States and Canada are in the Trenches of France *now* doing their utmost to protect *you* and *yours*. Hundreds more are going. *It is up to you* to let them know you appreciate what they are doing.

They need tobacco and comforts, you can surely share with them what you are getting in abundance. Cheer them up and let them know the lumber industry is behind them by *subscribing today—now* to

The Lumberman's Soldier's Comforts Fund

In charge of the Concatenated Order of Hoo-Hoo. If you know of *any lumbermen* who have joined the ranks of the American or Canadian army or navy send their names and address to

E. D. TENNANT
1218 WRIGHT BLDG., ST. LOUIS

We want to get in touch with them.

FILL OUT AND MAIL TODAY

E. D. TENNANT, 1218 Wright Building, St. Louis, Mo.

.....191.....

Dear Sir:

Enclosed find Check, Money Order or Currency for \$....., covering my subscription to the "Lumberman's Soldier's Comforts Fund."

Monthly subscriptions are solicited. If you prefer to subscribe a certain amount per month, fill in below.

I hereby agree to subscribe \$..... per month for one year from date, or for duration of war, payable on the first day of every month, commencing191.....

Signature

Address

Make Checks payable to E. D. Tennant, Treasurer.

Manufacturers Appoint Committees

As an aftermath of the meeting of the executive committee of the American Hardwood Manufacturers' Association, held at Memphis recently, the organization has been further perfected by the appointment of the standing committees which are to look after various phases of the work of this body.

The association plans to make a drive for a large and representative membership and to this end the executive committee has selected a membership committee of unusual proportions with a view to having one member thereon in each section of the country covered by this body. This membership committee is composed of the following:

W. A. Ransom, Gayoso Lumber Company, Memphis, chairman; T. M. Brown, W. P. Brown & Sons Lumber Company, Louisville, Ky.; G. H. Holloway, Utley-Holloway Company, Chicago; C. H. Murphy, Saline River Lumber Company, Pine Bluff, Ark.; Ralph May, May Brothers, Memphis; W. D. Brewer, Brewer Neinstedt Lumber Company, Miltonberg, Ga.; Frank F. Fee, Fee-Crayton Hardwood Lumber Company, Dermott, Ark.; F. L. Gregory, Bliss-Cook Oak Company, Blissville, Ark.; Chester F. Korn, Triangle Lumber Company, Cincinnati; R. M. Carrier, Carrier Lumber & Manufacturing Company, Sardis, Miss.; J. F. McSweyn, Memphis Band Mill Company, Memphis; McEwen Ransom, John B. Ransom & Co., Nashville, Tenn.; W. C. Bonner, J. H. Bonner & Sons, Memphis; S. M. Nicky, Green River Lumber Company, Memphis; H. J. Ingram, Stout Lumber Company, Thornton, Ark.

It is likewise planned to have the offices of all the associations in Memphis—the American Hardwood Manufacturers, the Southern Alluvial Land and the Southern Hardwood Traffic—on the same floor of the Bank of Commerce & Trust Company building for the convenience of the members of these bodies. There are many members of one who are connected with one or more, or with all, of these organizations and the idea is to facilitate transaction of such business as they may have with these various organizations. The committee which will handle this subject is composed of the following:

B. F. Dulweber, Memphis, chairman; H. B. Weiss, George C. Brown & Co., Memphis, and James E. Stark, James E. Stark & Company, Memphis.

C. L. Harrison, Cape Girardeau, Miss., constitutes the advertising committee at the moment but there is to be a governing committee for each hardwood lumber or each department and one of the members of each of these governing committees is to serve on the advertising committee, with the result that Mr. Harrison is simply chairman of the whole and that the committee will be of considerable size when all the departments contemplated have been organized.

The other committees are given herewith:

EXECUTIVE—R. L. Jurden, president, ex-officio chairman; E. A. Lang, Chicago; R. M. Carrier, Sardis, Miss.; M. B. Cooper, J. W. McClure, James E. Stark and D. F. Dulweber, Memphis.

FINANCE—B. F. Dulweber, Kraetzer-Cured Lumber Company, Memphis, chairman; Mark H. Brown, Brown & Hackney, Inc., Memphis; D. F. Heuer, A. N. Thompson & Co., Memphis; W. L. Crenshaw, Crenshaw-Gary Lumber Company, Memphis, and W. L. Coulson, Coulson Lumber Company, Memphis.

ASSESSMENT—J. W. McClure, Bellgrade Lumber Company, Memphis, chairman; R. C. Stimson, Stimson Veneer & Lumber Company, Memphis; W. E. Hyde, Hyde Lumber Company, Memphis; R. Sondheimer, E. Sondheimer Company, Memphis, and Homer Alexander, Alexander Brothers, Belzoni, Miss.

REPORTS & STATISTICS—M. B. Cooper, Three States Lumber Company, Memphis, chairman; R. H. Darnell, R. J. Darnell, Inc., Memphis, and R. T. Cooper, Memphis Band Mill Company, Memphis.

The association is receiving numerous letters from members complimenting it on the aggressive manner in which it has begun its work. Special commendation has been tendered on the issuance of weekly instead of monthly sales reports because it is realized that, in the present situation, with prices changing so rapidly and with conditions generally so uncertain, sales reports a month old are of rather questionable service while those issued weekly are of inestimable value. The association has just begun issuing these reports weekly.

The association is much pleased with the attitude of those members from whom it has heard regarding sending in bona fide sales

reports. Four prominent firms have advised the association that they are perfectly willing to send in actual copies of sales reports as forwarded to their mill foreman, including the name of the buying individual, firm or corporation. They believe that this method will insure most satisfactory results because it will remove all possible suspicion regarding both sales and prices. They point out that they rely on the superior character of their product to insure commanding the patronage which they are now receiving and that, if they are not able to hold their customers on this basis, they are not entitled to keep them.

Plans are being worked out which will enable John M. Pritchard, secretary-manager of the association, to spend part of his time in Memphis in the interest of this organization. Nothing, however, can be given out for publication at this time as to just how this will be accomplished. The idea is to secure part of his time without impairing his usefulness as manager of the Southern Hardwood Emergency Bureau at Washington.

Minimizing Lumber Handling

Furniture and flooring factories and other consumers of lumber give thoughtful attention to eliminating unnecessary handling after the lumber has reached the stock sawyer and begins its way as raw material through the plant. It has long been recognized as a waste to run stock through a machine and let it drop or be piled on the floor where it must be taken up and loaded on a truck for conveyance to the next machine. In the modern plant stock goes from the machine either directly on to trucks or to conveyors which carry it to the next point. Quite a science has been made of this subject inside the factory, but more attention should be given the handling of lumber outside the factory.

This is a thought that came to mind recently while looking over the out-lay at a flooring plant which had been carefully planned both for receiving lumber and for shipping out the finished product. The plans included a dry kiln where additional compartments could be put on as increased capacity might be needed. Fronting the dry kiln were transfer trucks and tracks which would carry any truck of lumber from any kiln compartment directly to the receiving end of the factory and start it on its way without rehandling after drying. At the other end of the dry kiln, considerable lumber was piled fairly convenient to the loading or piling platform. The side track was parallel with the plant, convenient to unload from the cars to piles which were near enough to be drawn from, and the lumber piled on dry-kiln trucks.

But at that point there was extra handling of lumber. The extra time consisted in putting it down in piles from which it had to be taken up again and loaded on dry-kiln trucks. Here was an opportunity to eliminate one time handling by following out the same idea put into practice at the other end of the kiln, that of having a transfer track and a series of trucks on which lumber could be piled as it came from the cars. This would call for a little more space, a little more investment in trucks and tracks, but it would minimize the handling and ought to justify itself at many plants where lumber is handled several times.

In some instances this idea is being put into practice. When lumber is received on the car it is sorted and piled on trucks, the trucks and piles being made to fit into dry-kiln compartments, which eliminates one time handling. Sorting and distributing to different trucks can be accomplished readily by the use of gravity conveyors and in many instances quite a saving in labor cost effected by a plan of this kind. It is just as important to minimize the labor item in handling lumber between the car and the dry-kiln as it is to eliminate useless handling of lumber from the dry-kiln through the factory.

The way the "little things" are done about the factory usually indicates the measure of success of the concern. Where little things are neglected, greater things may also be neglected.

Traffic Branch Shows Progress

Some excellent reports were made by the officers of the Southern Hardwood Traffic Association, at the annual meeting of the Louisville Branch, held at the Seelbach hotel, on Tuesday, February 19. These reports showed excellent work done during the year, when a traffic department was very essential, and it was decided that in recognition of the fine work done by R. R. May, manager of the traffic branch, his salary as manager would be increased by the sum of \$500 per annum. Mr. May is also secretary of the Louisville Hardwood Club. Mr. May was reelected as manager, and T. M. Brown of the W. P. Brown & Sons Lumber Company, Louisville, as chairman for another year.

The following directors will serve: T. M. Brown, W. A. McLean, C. E. Platter, A. E. Norman, Jr., W. R. Willett, W. A. Watts, E. L. Davis, H. J. Gates, D. E. Kline, John Churchill and Daniel Wertz. The latter is a new member of the board, while Mr. Churchill succeeds the late Smith Milton.

In his report Chairman Brown spoke of the progress made during the past year due to the excellent work of Mr. May and through the cooperation of members. He warmly complimented Mr. May and recommended increasing his salary. He urged that in the future members attend the regular monthly meetings of the board as there are a great many problems coming up constantly that have to be faced.

Mr. May in his report said that the past year was the worst in the matter of transportation the trade had ever faced. He said that the association has been of considerable service in securing cars, quoting rates and routes, locating routes not embargoed and tracing and reconsigning and endeavoring to speed up car movements. He referred to the work handled through the main office of the Southern Hardwood Traffic Association on the proposed fifteen per cent advance in freight rates. He said that at the rehearing secured by the transportation companies the evidence submitted originally at the first hearing before the commission was resubmitted, and that the commission is now considering the merits of the case and will doubtless hand down a decision shortly.

Mr. May said the association has every reason to believe that no advance will be allowed.

He also told of the work done on the reclassification case referring to the fact that Examiner Esch in his tentative report recommended the adoption in toto of the views of the Traffic Association.

The report then went on to tell of more favorable rates secured through the efforts of the Louisville branch of the association covering shipments on a number of very important routes. Among these cases was one involving increase in minimum weights on lumber and veneers from 30,000 pounds to 36,000 pounds. The board filed protest together with evidence to show it is practically impossible to load this amount of stock in an ordinary thirty-six foot box car. The question of proposed increase in minimum weights in this particular case has been postponed.

Referring to demurrage charges the report states:

The director general, after assuming control of the railroads, issued an order requiring all lines to file, effective on January 21, certain increased demurrage charges. Our organization was instrumental in having new demurrage charges published and in fact, all the tariffs issued to become effective January 21, were rejected by the Interstate Commerce Commission; consequently, there was no change in the demurrage rules up to February 10 when the \$3, \$6, and \$10 rate went into effect. A number of our members have been experiencing trouble in settling demurrage charges on various cars, and we have in numerous instances, had them waived. No demurrage should be paid at all until a car is actually placed on your sidings for unloading. When cars are bunched in the yards by the railroads and you are, as a result of such action, unable to take care of same, no demurrage at all should be paid, on cars held out on account of same.

Mr. May advised members to energetically insist upon the railroads following government orders to pool freight equipment. Re-

ferring to arbitrary misinterpretation of government instructions regarding reconsigning, Mr. May said that the roads have arbitrarily considered that the order, recently issued by the regional director which prohibited acceptance of lumber destined to hold or reconsigning points, meant that no freight could be reconsigned. He said this was not the intention of the directors' orders, that instances to the contrary should be reported so that they may be properly handled.

Regarding future prospects Mr. May said:

Since the establishment of government control, there has been quite some confusion and very little lumber shipments handled, due in my mind, entirely to the inefficiency of carriers themselves and lack of knowledge and presence of red tape on the part of government officials having direct supervision of these matters.

The theory has been advanced not only by the shipping public but by the different brotherhoods that the railroad operators are endeavoring to make the government operation of railroads a miserable failure. This no doubt is true for as recited in other parts of this report, the railroads have taken every advantage of loopholes in government regulations and have purposely misconstrued orders of the director general. Am glad to state, however, that the director general's office is beginning to assume some proportions and is being divided into various divisions.

The report then went on to instance several cases where roads have shown an arbitrary disposition to misconstrue or misapply government orders.

He then went on to outline the favorable effect the increased use of southern ports will have on lumber movements, and stated also that the pooling of equipment is a decided advantage.

The report closed with a resume of membership and the prospects for headway, and a brief account of the claims filed, paid, withdrawn and pending as filed with the bureau.

The Most Elastic American Wood

In combined strength and stiffness or elasticity the mangrove tree which fringes the Florida reefs and much of the southern shore of the mainland of that state, surpasses all other American woods, so far as shown by tests. Its strength is approximately the same as that of shellbark hickory, but it rates twenty per cent above hickory in elasticity, and it is believed that in the latter property it measures higher than any other wood of this country.

Nature wisely provided the mangrove with the properties most essential to its existence in the peculiar situations where it prefers to grow. It fringes the land and the trees usually stand in water from a few inches to several feet deep. The growth assumes the form of a long ribbon of green separating land from water. No one can tell where one individual tree begins and another ends, so intricately are the branches and trunks interlaced and matted together. Roots drop from overhead branches and fasten in the mud at the bottom of the shallow water, and a single tree may consist of a score of stems or trunks.

If the mangrove were weak and brittle like cottonwood, chestnut, pine, or even if it were no stronger and stiffer than oak, the waves during storms would break every tree and limb and crush them into splinters.

The wood sinks like iron. Even when absolutely dry it weighs 72 pounds to the cubic foot (ash weighs about 40). It plunges to the bottom and there it lies and soon is buried in the mud and sediment that collects about it. It is, therefore, a landbuilder, not only by protecting the shores while it is alive but also by helping to raise the muddy bottoms above water level by a contribution of dead trunks.

The reefs and shore lines of southern Florida are rapidly encroaching on the sea and the mangrove thickets are active agents in hastening the change. Hundreds of square miles lying between the mainland and reefs where the Midocean Railroad runs to Key West, will rise above water and become swamp land in a few centuries and mangrove clumps, fringes and thickets will contribute a great deal to bring about the change.

Northern Wholesalers' Meeting

The first annual of the Northern Wholesale Hardwood Lumber Association was held at the Hotel Wisconsin, Milwaukee, on Tuesday, January 19.

In his address President Humphrey told that in 1917 members of the association handled 465,000,000 feet of hardwoods, of which 140,000,000 feet was manufactured by members, 90,000,000 feet bought from non-members' mills and 235,000,000 feet from members' mills.

President Humphrey told of the organization meeting held at Rhinelander a year ago for which getting together C. P. Crosby of Rhinelander was mainly responsible. Several helpful special sessions have taken place since then. He expressed great pleasure in the effect of the association upon ethics among wholesalers, saying that it has had a noticeable effect in eliminating the old distrust and working to cross purposes, but would probably accomplish even more in the future. He went on to speak of conditions referring to market firmness and steadily rising prices and enlarging upon future possibilities. The future, he said, is more than speculation and is involved by many conditions. He did not express the belief that much direct war business would come to the association members, but stated that there should be considerable indirect war orders filled.

He said that while most shippers insist upon payment of the freight tax by customers there are some who, for advertising purposes, pay this tax themselves. Such practice is demoralizing and should be abandoned.

Regarding the new grade of selects, Mr. Humphrey said that some members do not include this in their price lists, but should do so, and that where the seller does not want to lay aside selects he should make a price on combined selects and No. 1 common.

He recommended quarterly meetings in addition to the annual in February.

The report of Secretary J. F. Hayden of Minneapolis was necessarily brief, as was that of Treasurer J. B. Andrews of Wausau, which showed a satisfactory balance on hand.

Following the report of Chairman F. K. Bissell of the membership committee the association voted in the Robert Duncan Lumber Company of Minneapolis and the Frank Carter Company of Menominee.

H. H. Butts of Park Falls, Wis., and Geo. Robson of Merrill, Wis., both members of the Bureau of Statistics and Educational Information of the Northern Hemlock and Hardwood Manufacturers' Association, spoke informally of the work of the Bureau, after which market discussion followed.

Afternoon Session

The opinion seemed general as revealed in market talk at the beginning of the afternoon session that except at Wausau the box manufacturers are not very well supplied with lumber.

The members were treated to a most interesting analysis by F. M. Elkington of Milwaukee of the railroad situation and transportation legislation. Mr. Elkington expressed great confidence in government control making possible great economy in time and equipment as well as money that could not have come under competitive conditions. Shippers must be prepared to adjust their business to rapidly changing conditions, but to do so with as little departure from normal as possible. There should be no hesitancy in extending honest criticism of what appear to be wrong measures, as such criticism is patriotic rather than unpatriotic.

According to the speaker's analysis of the proposed compensation to the roads this is based on the three most successful years of railroad operation, calls for an outlay of \$95,000,000 a year, which is \$450,000,000 more than the average for fifteen years back and would represent a profit of nine per cent to fifteen per cent on capital.

The speaker emphasized the seriousness of making rate making a

political matter, as would happen by giving the president rate making powers and then expressed his astonishment at the indifference of the shippers as a class to matters that concern them deeply.

The most serious menace of the new bill is that taking from the shipper the right to protest against new tariffs before they go into effect. This provision would make protests against unfair rates absolutely ineffectual. He emphasized the importance of the lumber industry promptly using every means to block the passage of legislation that would practically abolish the usefulness of the Interstate Commerce Commission and bring about deplorable relations between shippers and the carriers.

So convincing were Mr. Elkington's statements that the following resolution was adopted for transmittal by wire to Wisconsin and Minnesota senators at Washington:

RESOLVED: That the Northern Wholesale Hardwood Association in convention assembled is opposed to such provisions of the pending railroad bill as will remove from the Interstate Commerce Commission any jurisdiction over freight rates.

On recommendation of the nominating committee the following officers were re-elected:

PRESIDENT—H. C. Humphrey, Appleton, Wis.

VICE-PRESIDENT—C. P. Crosby, Rhinelander.

TREASURER—J. B. Andrews, Wausau.

SECRETARY—J. F. Hayden, Minneapolis.

DIRECTORS—H. J. Stone, Marshfield; G. T. Johnson, Milwaukee; A. J. Jarvis, Eau Claire.

After the adoption of resolutions of support to the government the following standing committees were appointed:

MEMBERSHIP—A. J. Tipler, Green Bay; J. H. O'Melia, Rhinelander; F. K. Bissell, Wausau.

FINANCE—C. P. Crosby, Rhinelander; Payson Smith, Minneapolis; A. J. Jarvis, Eau Claire.

ARBITRATION—A. G. Wilson, Rhinelander; A. H. Barnard, Minneapolis; G. T. Johnson, Milwaukee; F. K. Bissell, Marshfield; H. S. Crosby, Rhinelander.

STATISTICS—T. H. Schoenhafen, Marshfield; L. H. Wheeler, Wausau; W. J. Grossman, Green Bay; T. T. Jones, Minneapolis; T. E. Lee, Stanley.

RESOLUTIONS—C. E. Gill, Wausau; John Carter, Menominee; P. M. Parker, Minneapolis.

After deciding upon Rhinelander, Wis., for the meeting some time between May 10 and May 25 the meeting adjourned.

Fire Walls Useless Unless Solid

Wood block flooring for factories, in place of concrete, is receiving considerable attention, and seems to be giving satisfactory results.

We are told in *Factory* that as a woodworking plant grew in size the new buildings were divided by fire walls, and all other modern improvements were installed as fast as possible. The sprinkler system was delayed because of difficulty in getting material. In the meantime the firm needed the room to fill its orders, so the buildings were occupied as fast as the roofs were on.

In hanging the line shafting the millwrights found that their lengths were a foot or two longer than the rooms. The management was crowding these men so hard, however, that instead of cutting off the shafting to correct lengths, they simply broke through the fire walls. Of course it was planned to eventually cut the shafting, and brick up the holes. But the fire came before this was done, as it almost always does, and the firemen could see the flames lick through these holes, and render all their efforts to save the plant unavailing.

An opinion may not be expressed by a witness on a point where the jury is amply able, through common sense, to judge for itself. For instance, the Iowa supreme court has stated that a lumberman cannot be regarded as an expert for the purposes of stating whether certain lumber was piled in reasonably safe condition, so as to avoid falling and consequent injury to persons nearby, for after the method of piling adopted has been explained and the condition of the pile described, it was presumed that the jury could form their own judgment as to the safety of the lumber.

Pertinent Legal Findings

Queries on questions arising on any points involving the law as it is applied to lumbering and allied industries will be given proper expert attention through this department if submitted to HARDWOOD RECORD. There will be no charge for such service, but HARDWOOD RECORD reserves the right to publish questions and answers without designating names or location of inquiries unless specifically requested not to do so.

Lawful Trade Union Practices

A trade union of carpenters or woodworkers may lawfully forbid its members from working in an open shop planing mill with non-union men, without becoming liable to the operator of the mill as for declaring an unlawful boycott, although a general boycott declared with malicious intent to effect an unlawful purpose is actionable. And unionists, to promote the legitimate objects of organized labor, may agree among themselves not to work upon non-union made materials. But when a trade union calls upon the public generally to discontinue use of a particular manufacturer's materials, and seeks to prevent all persons from dealing with him, there is an actionable interference with his business.

Trespassing Upon Timber

One who willfully trespasses upon private timber acquires no title to logs cut by him, and hence can convey no title to a third person howsoever innocent the third person may be of any wrongful intent. And where the owner of such timber traces it through the hands of a willful trespasser into products manufactured from the logs, he is entitled to claim the value of such products, not being restricted to the value of the logs. In other words, a trespasser or one claiming directly under him, when caught with the logs in converted form is not entitled to an allowance on account of labor or expense involved in such conversion. And within these principles one is a "willful trespasser" if he goes upon land and cuts timber on the strength of some person's statement that he is the owner of the timber and authorized to grant the right to cut it, without requiring such person to exhibit his title.

Injuries Caused by Simple Tools

In affirming a judgment dismissing a suit brought by a lumber company's employe to recover damages caused by a defective hatchet furnished him for use in his work, the Arkansas supreme court recently said in the case of *Arnold vs. Doniphan Lumber Company*, 198 Southwestern Reporter, 117:

An innumerable number of cases define the duty of the master in furnishing the servant safe tools with which to work, and the duty of inspecting those tools, but there are circumstances under which the master owes the servant no such duty. He does not owe this duty where the tool furnished is one which requires no special skill or training for its safe use, and when the defect, if any, is as obvious to the servant as it is to the master, or when the defect arises from the use of the tool and the servant would naturally be the first person to discover the existence of the defect. The concurrence of these conditions gives rise to what is called the "simple tool" doctrine, which is another way of saying that the master must inspect and instruct when the circumstances of the employment are such that reasonable care and prudence would suggest that this be done, but that he owes no such duty when the necessity therefor is not reasonably apparent.

Title to Lumber in Transit

The right of the holder of a bill of lading to reclaim possession of lumber shipped under it was involved in the late case of *Merchants' & Manufacturers' Bank of Ellisville, Miss., against Philip J. Toomer Lumber Company*, 76 Southern Reporter, 565, decided by the Mississippi supreme court.

The W. M. Carter Lumber Company received an order for a carload of lumber to be shipped to the Ganahl Lumber Company and apparently made shipment under a straight bill of lading. The invoice and bill of lading were assigned to plaintiff bank, which sent the papers to the Ganahl Company, stating that they belonged to the bank until the invoice price should be paid. While the lumber was in transit, a creditor of the Ganahl Company attached it, and the bank filed a claim for possession as against the attaching creditor, because title had not passed to the Ganahl Company.

In upholding the bank's right to possession, the supreme court holds that ordinarily a shipment of lumber directly to a buyer

under a bill of lading naming him as consignee vests title in him when delivery is made by the seller to the carrying railway company for transportation, but that title does not pass where, as in this case, the seller or his assignee signifies intention to retain title until payment is made.

Aspects of Timber Sales

The written terms of a contract for a sale of standing timber cannot be contradicted by either party showing that at the time the contract was signed there existed some verbal agreement at variance with such terms, although it is permissible to show a verbal agreement for the purpose of explaining away ambiguity existing in the writing. Where a contract for a sale of standing timber reserved to the landowners the right to remove tanbark during peeling seasons, the act of the purchasers of the timber in felling the trees before expiration of those seasons and before the landowners had peeled the bark was an actionable wrong, giving the latter a valid damage claim. A sale of "merchantable timber" conveys all such timber as is ordinarily used for sale or manufacture in the particular locality, and is not limited to such logs as will produce grades of lumber known and recognized as merchantable among lumber manufacturers. Where timber is sold on condition that it be cut and removed by the purchaser within a stated time, all timber left standing after expiration of that time reverts to the landowner, regardless of the fact that the buyer may have made full payment to cover all timber. (Virginia supreme court of appeals, *M. C. McCorkle & Son vs. Kincaid*, 93 Southeastern Reporter, 642.)

Trespass Upon Standing Timber

Under a sale of all hickory timber on a certain tract of land, measuring eight inches or more at the stump, and trees of other kinds measuring twelve inches or more, the buyer cannot avoid liability for a statutory penalty for cutting trees under the agreed dimension by showing that his employes were given general instructions to cut only such trees as should be of the agreed sizes; the buyer in such case must exercise reasonable superintendence over his employes to see that they do not sever trees reserved by the seller.

Return of Goods by Buyer

Where a buyer of saws returned them to the seller by express, seeking a cancellation of his contract of purchase, the burden was on him to show that the seller actually received the saws back and retained them; mere proof that the buyer sent them by freight to the seller with transportation charges prepaid raises no presumption that the seller received them. In such case, the railway company is to be regarded as the buyer's agent, and not the seller's, for the purpose of returning the articles. (North Carolina supreme court, *Branch Saw Company vs. Bryant*, 93 Southeastern Reporter, 839.)

Duty to Warn Employee Against Dangers

In affirming judgment in favor of an employe who was injured by collapse of the roof of a lumber shelter while he was engaged in removing tin from the roof, caused by a defective support of the roof, it is held by the North Carolina supreme court that the injured man was bound to take notice of such dangers as were plainly manifest, but that he was entitled to rely upon defendant employer's assurance given him that the roof was safe for the purposes of his work. The employer was bound to inform himself concerning the safety of the place before giving such assurance. In this case the defect consisted in the fact that the roof was supported by part of the tin being nailed to an adjoining building, and the danger was not apparent to the employe, for he did not know and his duties did not require him to know that there was no supporting braces under the roof.

Where Wood Will Answer

The campaign is on now to try to conserve the iron and steel supply for war purposes by substituting wood for metal wherever it can be done. Fortunately, it is possible to do it along many lines without lessening the value of the service which the people have been accustomed to receive. A search for places where wood can take the place of iron and steel shows surprising results. The field is wide and the opportunities are many. Some of the leading lines along which such substitutes can be made are the following:

In numerous instances the wooden shingle can take the place of sheet metal for roofing. The shingle is excluded from many towns because of municipal fire laws; but enormous quantities of metal roofing have been used outside of such limits, and it is possible, as an emergency measure, to repeal, or suspend, temporarily at least, the fire laws in many towns, where patriotism rises superior to prejudice.

The same observation holds with regard to siding. Wood can take the place of metal, and in most cases will prove at least as satisfactory.

The substitutes of wooden beams for steel in buildings of moderate size opens a wide field for conserving metal. The style of building known as "mill construction" has proved the efficiency of wood for beams and framework in buildings both small and large. It would be hard to figure out just how much steel could be released for other purposes by using wooden timbers in place of steel beams.

The manufacture of fixtures for offices, stores, hotels, halls, and banks, such as filing cabinets, counters, stationary desks and tables, partitions, cabinets, shelving, and many more, now calls for both metal and wood in large amounts. The whole demand might be met by wood, and the steel could be diverted to other channels.

Furniture is closely related to fixtures, and by substituting wood for metal, much steel could be conserved for other purposes. Exact statistics of metal furniture are not available, but the total is large.

Relatively few boxes are of metal, but these might be of wood. The principal metal boxes or trays are used for carrying bottled goods.

The metal barrel is much more common and is in wider use than the box. It ranges from the slack barrel of thin sheets to the heavy barrel or drum for carrying oils and other valuable commodities. The substitution of wooden barrels would bring no hardship to the user. Wooden barrels are in some ways superior to those of metal, and there is no question but that plenty of suitable wood can be had to meet any increase in demand.

Great saving of steel is possible in the manufacture of railroad cars by substituting wood for metal in such parts only in which wood is satisfactory. A billion and a quarter feet a year of wood are now consumed by car builders. A considerable increase over this amount might be made, with a corresponding decrease in steel.

Manufacturers of vehicles might dispense with much metal and let wood take its place. This could be done in wheels and also in panels for the bodies of light vehicles. Saving could be made also by constructing many kinds of vehicle frames partly or wholly of wood.

Agricultural implements afford another opportunity to substitute wood for metal without lowering the standards of efficiency. The same thing is possible in the manufacture of numerous kinds of machinery where frames and panels are used.

Metal caskets for the burial of the dead might give way to caskets of wood. More than 150,000,000 feet of lumber are now used annually by manufacturers of caskets, and this quantity would show substantial increase if metal caskets were no longer made.

THE CALL FOR CONSERVATION

This nation-wide call for the conservation of iron and steel by introducing substitutes, does not come from lumber manufacturers and dealers, but from government authorities who see the need of the measure. Steel producers are not voicing objections. They recognize the crisis and they know that they cannot produce enough steel to meet the needs of the government and of private business, too, and it will relieve the strain upon them if some of the burden can be borne by lumbermen. It is fortunate that the lumber industry is able, in this emergency, to carry the increased load.

EIGHTEENTH ANNUAL BANQUET OF NATIONAL LUMBER EXPORTERS' ASSOCIATION, HOTEL MARTINIQUE, NEW YORK, JANUARY 23-24, 1918

The Mail Bag

B 1176—Wants Turkey and India Boxwood

Allentown, Pa., February 18.—Editor HARDWOOD RECORD: Could you advise us where we could purchase in carload lots Turkey boxwood and India boxwood logs. We seem to be unable to locate same.

B 1177—Oak Rim Strips Wanted

New Palestine, Ind., February 15.—Editor HARDWOOD RECORD: We are in the market for red and white oak rim strips $3\frac{1}{2}'' \times 2\frac{1}{2}''$ —7' and 8' for army escort wagons.

B 1178—Oak Squares Needed

Gardner, Mass., February 12.—Editor HARDWOOD RECORD: We want at once oak squares, $1\frac{1}{8}'' \times 1\frac{1}{8}'' \times 19''$.

Clubs and Associations

Joint Meeting of Northern Loggers

W. J. Maitland of the Park Falls Lumber Company, Park Falls, Wis., and secretary of the North Wisconsin Loggers' Association, announces that various associations in the logging field in the North will hold a joint session in the Pfister hotel, Milwaukee, on Thursday, March 28. The associations joining are: Central Wisconsin Loggers' Association, Northeastern and Upper Michigan Loggers' Association, Upper Peninsula Loggers' Association, North Wisconsin Loggers' Association.

Walnut Men Confer at Washington

A strong delegation of walnut men composed of John Penrod and Frank Purcell, Kansas City; Fred Hoffman, Fort Wayne; V. L. Clark, Des Moines, Iowa; W. W. Knight, Indianapolis, consulted with officials at Washington last week in an effort to straighten out the situation caused by the government's procrastination in specifying quantities of walnut needed for war work. The walnut manufacturers are prepared to do the utmost to meet our and our allies' needs for walnut products and have the walnut situation well in hand.

National Manufacturers Meet in April

The National Lumber Manufacturers' Association announces through acting secretary, John Lind, that the next annual meeting will be in Chicago on April 9 and 10. Delegates will be appointed by each of the affiliated associations for each 100,000,000 feet of annual shipments. Individual members are also urged to attend, as the meeting will be of unusual importance. Opportunity will be given to attend the sessions of the Chamber of Commerce of the United States, which will start in Chicago on April 10.

War Board for Chicago Association

C. B. Flinn of the Metropolitan Lumber Company heads the newly formed war board recently organized by the Lumbermen's Association of Chicago for service during the war. The board is made up of chairmen of the seven divisions of the associations, as follows:

C. B. Flinn, chairman; L. W. Crow, H. H. Hettler, Edward Hines, F. J. Heidler, H. H. Kraetzer, E. C. Schoen, G. A. Nanguess, S. C. Bennett, John S. Hurd, M. G. Truman, P. S. Fletcher, R. C. Clark, Murdock McLeod, A. H. Ruth, John Anderson, John Hanson, A. Wallerstein, J. A. Olson, E. W. Dierssen, John Westburg.

This list is further augmented by two additional members from each division, thus making up a board with a total membership of twenty-nine.

The board will have charge of all work coming before the local lumber trade having anything whatever to do with the war.

New Manufacturers' Association Progressing

In keeping with the policy of centralizing the headquarters of the various associations of hardwood interests at Memphis, the former American Oak Manufacturers' Association and the Gum Lumber Manufacturers' Association have combined in the former offices of the oak association on the fourteenth floor of the Bank of Commerce building. It is announced at these offices that the rotary veneer manufacturers affiliated with the new association have formally organized their rotary veneer department.

The governing committee is made up of G. W. Sparks, Des Arc, Ark., chairman; S. M. Bush, Cotton Plant, Ark.; H. J. Ingram, Thornton, Ark.; A. M. McGhee, Tuscaloosa, Ala., and W. E. Truxford, Byram, Miss.

The association announces new members as follows: Hemphill Lumber Company, Kennett, Mo.; Cochran & McCallum, Cornith, Miss.; H. W. Darby Hardwood Company, Grenada, Miss.; Dillman Egg Case Company, Caruthersville, Mo.; Merl Lumber Company, Meridian, Miss.; Henry Maley Lumber Company, Jackson, Miss.; Thomas E. Powe Lumber Company, St. Louis.

The association offices are busy compiling data on prices, markets, lumber stocks, log supply, prospects, etc.

Important Information in National Bulletin

The February bulletin of the National Hardwood Lumber Association is unusually full of information for the hardwood lumber trade. The most important feature is the official list of firms holding contracts for wagons and trucks being made for the Army Vehicle Section of the Council of National Defense.

Government orders already placed for 134,000 escort wagons, 25,000 trucks, numbers of extra wheels, box boards and other accessories are instanced. The manufacturers will all buy their own raw materials.

Quotations are asked for to be sent to the War Service Bureau of the association on FAS poplar, sap no defect in $2\frac{1}{2}$, 3 and 4-inch stock, with information on amounts available and that can be supplied; on FAS cherry for airplane propellers.

The Bureau placed orders for 2,000,000 feet of lumber during its first month of operation. The list of wagon and truck makers follow:

Abingdon Wagon Company, Abingdon, Ill.; Charles Abresch Company, Milwaukee, Wis.; Acme Wagon Company, Emigsville, Pa.; Auburn Wagon Company, Martinsburg, W. Va.; Bain Wagon Company, Kenosha, Wis.; Brown Manufacturing Company, Zanesville, Ohio; Chattanooga Wagon Company, Chattanooga, Tenn.; Columbia Wagon Company, Columbia, Pa.; Cooper Wagon & Buggy Company, Dubuque, Iowa; John Deere Wagon Company, Moline, Ill.; the Eagle Wagon Works, Auburn, N. Y.; Emerson-Brantingham Company, Rockford, Ill.; Florence Wagon Company, Florence, Ala.; Ft. Smith Wagon Company, Ft. Smith, Ark.; Hoover Wagon Company, York, Pa.; Indiana Wagon Company, Lafayette, Ind.; International Harvester Company, Chicago, Ill.; James & Graham Wagon Company, Memphis, Tenn.; Keller Manufacturing Company, Minneapolis, Minn.; Kentucky Wagon Manufacturing Company, Louisville, Ky.; Lehart Wagon Company, Minneapolis, Minn.; Luedinghaus & Espenchied Wagon Company, St. Louis, Mo.; Mandt Wagon Works, Stoughton, Wis.; Milburn Wagon Company, Toledo, Ohio; Miller Wagon Company, Edina, Mo.; The Miller Wagon Company, Calmar, Iowa; Mogul Wagon Company, Hopkinsville, Ky.; Moline Plow Company, Moline, Ill.; Newton Wagon Works, Batavia, Ill.; Owensboro Wagon Company, Owensboro, Ky.; Pekin Wagon Company, Pekin, Ill.; Randolph Wagon Works, Randolph, Wis.; Schmidt & Stork Wagon Company, West Bend, Wis.; Peter Schuttler Company, Chicago, Ill.; Springfield Wagon Company, Springfield, Mo.; Stoughton Wagon Company, Stoughton, Wis.; A. Streich & Bros. Company, Oshkosh, Wis.; Studebaker Corporation, South Bend, Ind.; E. F. & H. L. Sweet Company, Fond du Lac, Wis.; Thornhill Wagon Company, Lynchburg, Va.; Troy Wagon Works Company, Troy, Ohio; Turnbull Motor Truck & Wagon Company, Defiance, Ohio; Joel Turney & Co., Fairfield, Iowa; Winona Wagon Company, Winona, Minn.; Anderson Company, St. Paul, Minn.; Appleton Manufacturing Company, Batavia, Ill.; Electric Wheel Company, Quincy, Ill.; Havana Metal Wheel Company, Havana, Ill.; King & Hamilton Company, Ottawa, Ill.; Peru Plow & Wheel Company, Peru, Ill.; B. C. Bassett, Sterling, Ill.; Beggs Wagon Company, Kansas City, Mo.; Birdsell Manufacturing Company, South Bend, Ind.; Buickins Manufacturing Company, Pella, Iowa; Chase City Manufacturing Company, Chase City, Va.; Hackney Wagon Company, Wilson, N. C.; Hannibal Wagon Company, Hannibal, Mo.; Hickman Wagon Company, Hickman, Ky.; Kramer Wagon Company, Oil City, Pa.; Linetron Wagon Works, St. Louis, Mo.; Mackinnon Wagon Company, Grand Rapids, Wis.; New Conklin Wagon Company, Olean, N. Y.; George E. Niesen & Co., Winston-Salem, N. C.; Patterson Manufacturing Company, Holly, Mich.; Piedmont Wagon Company, Hickory, N. C.; C. O. Rud & Co., Lansing, Iowa; C. N. Russell & Son, Clarksville, Va.; Smith Manufacturing Company, La Crosse, Wis.; Swab Manufacturing Company, Elizabethtown, Pa.; Tiffin Wagon Company, Tiffin, Ohio; Vaughn Manufacturing Company, Jefferson, Wis.; Virginia Wagon Company, South Boston, Va.; White Hickory Wagon Manufacturing Company, Atlanta, Ga.; Watson Wagon Company, Canastota, N. Y.

With the Trade

"Mayor" Hines in France

Mr. and Mrs. Edward Hines of Chicago hear from their son, Lieut. Edward Hines, Jr., that he has been appointed mayor of the French town in which he is quartered.

Lieut. Hines, who is but twenty-one years old, entered the first officers' training camp at Fort Sheridan, Ill., while a senior at Yale. He sailed for France shortly before Christmas and judging by his appointment to the mayoralty and also from the fact, as stated in his letter, that he has been named assistant to the adjutant of his battalion, he has advanced unusually.

In his interesting letter he speaks of his duties, praises the food and lauds the work of providing tobacco and other necessities for the soldiers in France.

Sterner Company Makes Sure of Shipments

The Sterner Lumber Company of Philadelphia, of which Maurice W. Wiley is the progressive head, has gone in for export business in an active way. The firm bid on an order of 100 cars of hardwood for the British Buying Mission, at Washington, and was awarded the business. When it came to the matter of shipments, that was arranged in a triangular deal between the British Commission, the Shipping Board and the Sterner Lumber Company. The final arrangements were that the Shipping Board was to furnish cars, if possible, and if it could not, right of way was to be granted, and cars were to be sent from Canada as needed, and sent through as loaded to Quebec. Mr. McMillan of the Sterner concern has gone to the mills now, and several cars will be shipped before the first of March.

Reparation Allowed

Reparation in the sum of \$11,500 has been ordered by the Interstate Commerce Commission to be paid by the Illinois Central Railroad to the Ayer & Lord Tie Company on account of unreasonable charges collected for transporting certain carloads of crossties from Mississippi and Alabama points to Chicago and Indianapolis, and treated at Carbondale, Ill., and forwarded from there to destinations.

Pertinent Information

Building Permits for January

Ever since the United States entered the war last April the monthly statements of building permits issued in the principal cities have shown losses compared with the previous year. Throughout 1916 there had been gains. The building of factories had become almost enormous and this carried with it much construction of miscellaneous character. This increased 1916 activity, notable during the first half of the year, shrank to slender proportions in later months. There were slight losses during the first several months of 1917, and losses became very pronounced after April, 34 per cent in May, 49 per cent in July, back to 27 per cent in September, then swinging down again to a 57 per cent shrinkage in December.

Now comes the January statement. It shows a decrease of 46 per cent, which is somewhat better than the showing for December. Construction work may be said to be running cold and out as it has been doing for nine months. One kind of obstacle after another has been thrown in its way and the current building is much below requirements. Practically every thing now built is of the essential type. There is need of increased housing almost everywhere, and because the houses are not going up rents are rising very sharply in many places.

In 111 principal cities of the United States the building permits issued in January, as officially received by the *American Contractor*, Chicago, total \$26,889,082, as compared with \$49,809,486 for January last year, a decrease of 46 per cent. Of these, 25 show an increase. The cities gaining are widely distributed, but the West is conspicuous among the favorable returns. Los Angeles, Cal., makes the notable gain of 625 per cent, and among other western cities that thus indicate building activity are Denver, Des Moines, Grand Rapids, Lincoln, Neb., Omaha, Salt Lake City, San Diego, Seattle, Tacoma and Superior, Wis. Taking rank among the eastern cities that have gained are Buffalo, New Haven, New Bedford, Mass., and Portland, Me.

License Needed for Foreign Parcel Post

The war trade board has sent out warning from Washington that much unintentional and some intentional breaking of the law is being done by persons who send merchandise out of the country by parcel post. Such exports require license the same as shipments by cargo, and the same penalties may be imposed for failing to procure the necessary license. Most of the shipments without license have gone by parcel post to American soldiers in France; but the senders of the parcels had no intention to break the law, and were unaware that they were doing so. But unscrupulous persons have taken advantage of the situation to send merchandise for sale without first procuring license. The law on the subject reads:

Any person who shall export, ship, or take out, or deliver, or attempt to deliver for export, shipment, or taking out, any article in violation of the title, or of any regulation or order made hereunder, shall be fined not more than \$10,000, or if a natural person, imprisoned for not more than two years, or both; and any article so delivered or exported, shipped, or taken out, or so attempted to be delivered or exported, shipped, or taken out, shall be seized and forfeited to the United States, and any officer, director, or agent of a corporation who participates in any such violation shall be liable to like fine or imprisonment, or both.

Those who wish to send packages abroad may apply for licenses at the Bureau of Exports, 1435 K street, N. W., Washington, D. C., or at any of the branches of the bureau, which are located in the following cities: Seattle, Portland, San Francisco, Los Angeles, Nogales, El Paso, Eagle Pass, Galveston, New Orleans, Mobile, Savannah, St. Louis, Chicago, Boston and New York.

The Market for Cordwood

The scarcity of coal has created the best market for cordwood in years, and a large increase in production may be expected. North Carolina is one of the states that are preparing to take advantage of the opportunity, and conditions there are likely not much different from most regions. The state geological survey has published a bulletin on the subject, showing that the farmers control the hardwood situation. Taken for the whole state, the average price per cord for hardwood is \$4.75, delivered, and pine is about 25 cents less, which is an increase of from 30 to 50 per cent over prices prevailing a year ago. The cost of cutting wood varies from 50 cents to \$2.50 a cord, the average being \$1.08. The average distance of hauling by wagons is a little less than four miles and most towns are supplied by wagons from the surrounding country. It is generally calculated that two pounds of dry wood is equal to one pound of coal for heating purposes, or one cord of good hardwood is equivalent to one ton of coal.

Speed Record on Building

What is believed to be a record for fast building was established at United States army Camp Joseph E. Jackson recently when 104,000 feet of lumber were converted into an army warehouse measuring 150 by 60 feet in less than three hours. A working gang of 280 men were moved to the site on which the building now stands at 10:50 in the morning and at 1:45 the same afternoon the last nail had been driven and the building was ready for occupancy.

The sills of the building are 8 by 13 timbers and exactly three minutes after starting work they were all set. Fourteen minutes later all the

floor joists were in place. Then enough of the floor was laid so that the posts could be erected and the remainder was laid while the building was being closed in. There was no rehearsal or drilling of the men and no picking of individuals or gangs; but all the material was on hand.

Regarding the Wire Rope Situation

The February 18 bulletin of the Hardwood Manufacturers' Association of the United States contains the following interesting information from an authority regarding the prospects for future supplies of wire cable:

Trenton, N. J., January 22, 1918.

Mr. Everett Morse, Member Priorities Committee,

Council of National Defense, Washington, D. C.

Dear Sir: I am in receipt of your letter of the 15th instant, file 3806, in which you quote from a communication from the National Lumber Manufacturers' Association and show their estimated requirements, which amount to between twelve and thirteen million feet of rope of various kinds. It is understood, of course, that this total of rope covers the requirements of the lumber industry spread over the entire year 1918.

I hardly think that it would be feasible for the rope industry to attempt to take on and cover these requirements for the whole year (even should the requirements be in shape of fixed, irrevocable orders), for the reason that there is much uncertainty, in times like these, particularly as regards the production, and uncertainty as to the selling price of the product. It has not been the custom, even in times when contracting for customers' requirements was general, to cover customers for more than a six months' period; and for some time past (due to uncertainty) the custom of contracting has been practically dropped.

It is obvious that the manufacturers wish to have some assured source of supply, and, in the regular course of events, there does not seem to be any question but that there will be sufficient rope available, so that each particular manufacturer will be able to secure what he absolutely needs from his own regular source of supply, as the output of rope is steadily increasing and, before a very great while, the stringency will be materially relieved. Of course the military branches of the government may come in at any time with staggering orders which may engage the entire productive rope capacity of the country (as has happened once or twice before), but these matters cannot be helped. The government orders must always get the right of way, and it is impossible to foresee what may happen in this regard.

Therefore, considering matters from the normal standpoint only (the only basis on which we can figure), I would suggest that the Lumber Manufacturers' Association instruct its constituent members to place with their various sources of supply, their absolute bona fide requirements, not to exceed three months. Such requirements to be not in the nature of an option, but bona fide orders, and I have no hesitation in saying that at the end of this three months' period there will be no difficulty whatever in getting a source of supply for the next three months' period.

It would be unfair to the rope manufacturers to expect them to cover the industry for any quantity, or at any price, for a longer period than three months at a time. I believe that for this period it can be arranged.

Very truly yours,

(Signed) KARL G. ROEBLING,
Chairman, Sub-Committee on Wire Rope.

Regarding General Orders Five and Six

The February 18 bulletin of the Hardwood Manufacturers' Association of the United States contains the following information regarding general orders five and six that should prove interesting to manufacturers owning or operating common carriers:

General order five calls upon the director general's railroad wage commission to make a general investigation of compensation of persons in the railroad service, the relation of railroad wages to wages in other industries, the conditions respecting wages in different parts of the country, the special emergency respecting wages which exists at this time owing to war conditions and the high cost of living, as well as the relation between different classes of railroad labor. Officers, agents and employees of railroads are directed to furnish any information called for by the wage commission.

General order six, issued by the director general, is addressed to "Officers and Directors of Railroad Companies." It calls attention to the necessity of care in handling the carrier's revenues during federal control and directs that they shall not be expended as follows:

1. For the payment of agents or other persons who are employed in any way to effect legislation.
2. For the employment of attorneys who are not actually engaged in the performance of necessary legal work for the company.
3. For the payment of the expenses of persons or agencies constituting associations of carriers unless such association is approved in advance by the director general.
4. For any political purpose or to directly or indirectly influence the election of any person or an election affecting any public measure.

It is further ordered that no free transportation shall be issued in the future unless expressly authorized by the Act to Regulate Commerce. The order applies to all carriers under federal control, whether interstate or intrastate.

Why Wooden Pins Are Best

It is not generally understood why the builders of wooden ships insist on wooden pins, and why they do not use iron bolts in fastening the timbers together. Iron is much stronger than the strongest wood. Wooden treenails are not demanded because they are superior to iron in strength, durability or convenience. Neither are they cheaper. They are used because they are softer and more yielding. When iron bolts are employed in fastening together ship timbers, the twisting, straining and bending of the vessel while on rough water causes the bolts to cut the wood, enlarge the auger holes in which the bolts are driven, and in course of time this cutting results in leaks round the bolts. Such a leak may be small, but hundreds of them at one time will let in enough water to be troublesome. The wooden pin yields as the vessel strains and twists, and the holes in which the pins have been driven are not worn larger, and no leaks result. A better job of carpentry can be done with wooden pins than with iron bolts. The protruding heads of the bolts are unsightly on the outside of a ship's hull. Protruding wooden pins can be adzed smooth, and when a coat of paint has been applied the ends of the pins become invisible. Though wood is less strong than iron, it is strong enough to meet all requirements as treenails.

Maple Sugar Prospects Good

High cost and scarcity of other kinds of sugar will result in an increased output of maple sugar and sirup this spring. Maple sugar is principally a farm output, from trees growing in woodlots. The industry has been on the decline the past fifty years. The production of maple sugar in the country was 40,000,000 pounds in 1860 and only 14,000,000 in 1910, but that decline was partly offset by an increase in sirup from 1,500,000 gallons in the former year to 4,000,000 in 1910. There has been a considerable decline in the number of maple trees during the fifty year period; but if all available trees are used this year, it is believed that a substantial increase in sugar and sirup will result. High prices will stimulate production. The season for maple sugar is now at hand. During the first warm days of spring the sap within the trunk is put under pressure by the expansion of the air in the pores and cells of the wood, and that is the right time for tapping the trees. The sap and sugar remain in the trunk all winter and do not rise from the ground in the spring as was formerly supposed.

The Foreman's Place in the Mill

The *Woodworker*, Indianapolis, Ind., has the following summary regarding the foreman's place in the mill:

The sawmill foreman is the boss of every one working in the mill, except possibly the filer. He may not have authority to hire or fire the engineer, the sawyer or the millwright, but he has authority to give them orders regarding the work. He must be enough of an organizer to build up and maintain an efficient crew that will work together to the best advantage, so that the daily cut of the mill will be at or near maximum at all times, and even in the face of difficulties.

The sawmill foreman must know logs and finish sawed lumber, like an expert. He must know sawmilling thoroughly, in order to hold his own as the head of a modern sawmill crew. He should know how to saw, but there is no need of his being a crack sawyer. He should be something of an engineer and millwright, in order to intelligently direct repair work and keep the entire mill running in the best possible condition.

He must be able to recognize the relative efficiency of every member of the mill crew (including the filer) by the work they turn out. He should be the one to settle any differences that may come up between filer and sawyer, or any other members of the crew. He must look out for the interests of his men, and at the same time the interests of his company. If he is really big enough for the job, the company will look to him for results, and all orders will be issued through him.

Of course, in different mills, the requirements, qualifications and duties of the sawmill foreman vary greatly. Hard and fast rules can hardly be made to apply, for obvious reasons.

American Furniture for Colombia

Although only ten per cent of the 5,000,000 inhabitants of Colombia buy imported furniture, the trade is gradually increasing and prospects becoming brighter for the American manufacturer, according to a recent report on the subject by the Bureau of Foreign and Domestic Commerce.

Austrian bentwood chairs were in demand before the war, but the medium and cheap grades of American chairs are now selling very well. Furniture made of reed, rattan, and similar materials is gaining in popularity, as it is admirably suited to the climate. There is a good market for center tables, as the custom is to place a table in the center of the room and arrange upon it a large amount of bric-a-brac and ornaments.

The author of the report, Special Agent Harold E. Everley, urges that special attention be given to packing, as goods are carried by boats, trains, mules, and men, are exposed to tropical rains and sun, and are transhipped no fewer than six times between the coast and some of the interior cities. He also warns against sending veneered furniture into the tropical sections of the country. It will not stand the climate.

Copies of "Colombian Markets for American Furniture," Special Agents Series No. 162, can be purchased at the nominal price of 5 cents from the superintendent of documents, government printing office, Washington, D. C.

A Concerted Effort to Start Building

What is believed to be the most significant undertaking devised in recent months by building, material and allied interests, looking to bringing about improved conditions, is the movement of the National Association of Builders' Exchanges to place before the government the true facts that now affect the industry. To this end the Cleveland hardwood interests, members of the Cleveland Board of Lumber Dealers, are now coöperating. Interest of the hardwood trade here is indicated by the fact that the principal outlet, in building construction, for hardwoods, is in housing, and of this there has been practically none in the last several months. For this reason they and the board as a whole are earnestly endeavoring to assist the survey inaugurated by the Cleveland Builders Exchange, as part of the national campaign of the national builders' exchanges. "We not only will assist the local committee in gathering the data as it applies particularly to our branch of the business but will seek to interest the various national lumber associations in the question," says J. V. O'Brien, secretary of the board. "We feel the strength of the movement to present to Washington the necessary facts and arguments regarding the building situation should not be dissipated by the independent action of the various bodies, but that every branch of business involved in building should unite in common effort, so that a permanent committee at Washington, which can represent building interests in general, during the period of the war will result." This stand substantiates the resolution of the National Association of Builders' Exchanges, adopted at the national convention at Pittsburgh early in February, and in which a federal advisory board on national construction is urged.

Mahogany from Bluefields

The exports of mahogany and cedar logs from the Bluefields, Nicaragua, consular district, to the United States increased from 3,051,467 feet, valued at \$176,043 for 1916 to 5,869,786 feet, valued at \$734,483 for 1917.

Hardwood News Notes

< MISCELLANEOUS >

The National Refrigerator & Fixture Company, St. Louis, Mo., is now conducting business under the style of the National Refrigerator Company.

Ernest C. McCann has been appointed receiver for the Robinson & Curry Company, Marysville, O.

The Eagle Furniture Company, Jamestown, N. Y., has assigned.

The Ingersoll-Rand Company has succeeded the Gordon Millwork Company at Painted Post, N. Y.

The following are recent incorporations: The St. Clair Lumber & Manufacturing Company, St. Clair, Mich., capital \$35,000; the Newark Woodworking Company, Newark, N. J., capitalization \$50,000; the Garman Wheel Company, Oxford, N. C., capitalized at \$50,000, and the Horgell-Hillstrom Shipbuilding Company, Prosper, Ore.

The name of the French Timber Company, Battle Creek, Mich., has been changed to the French Lumber & Manufacturing Company and the capital increased to \$100,000.

The capital of the A. B. Klise Lumber Company, Petoskey, Mich., has been decreased to \$75,000.

At Paducah, Ky., the Southern Hardwood & Tie Company is closing out.

A loss by fire has been sustained by the Memphis Furniture Manufacturing Company, Memphis, Tenn., and the Tidioute Furniture Manufacturing Company of Tidioute, Pa.

Among New York concerns who have incorporated recently are: the Newton Door Sash & Trim Company, Brooklyn, and the Rochester Moulding Works, Rochester, N. Y.

< CHICAGO >

The R. R. Slayton Mill Company has filed an involuntary petition in bankruptcy, as has also the Piano Back & Case Manufacturing Company, both local institutions.

The Dermott Land & Lumber Company announces that it has just moved its offices to the Steger building. The move was necessitated by a desire to enlarge its space, this being impossible in the Railway Exchange, where it has been located. The company is adding considerably to its force and will have much more extensive and desirable quarters in the new location.

It is stated that the Englewood Turning Company of Chicago is contemplating locating its plant at Lincoln, Ill. It is said that the present plant must be vacated on May 1 and the officials of the company are considering different locations.

P. E. Gilbert, vice-president, and J. B. North, sales manager of the Wisconsin Lumber Company, Harvester building, Chicago, left Sunday for a week's trip to the company's big mills at Deering, Mo. They will stop off at St. Louis on the way south and at Memphis on the journey home.

P. S. McLurg, president and general manager of the Kneeland-McLurg Lumber Company, Phillips, Wis., with Mrs. McLurg passed through Chicago last week en route to southern vacation points. The trip will cover about two months.

The Bissell Lumber Company of Marshfield, Wis., was represented in Chicago last week by F. K. Bissell and L. H. Schoenhofer.

Other prominent northerners were Chas. Gill of the Gill-Andrews Lumber Company, Wausau, Wis., and T. E. Lee, sales manager for the Below Lumber Company, Stanley, Wis.

A. O. Davis of the Sabine Tram Company, Beaumont, Tex., and secretary of the Southwestern Hardwood Manufacturers' Club, writes *HARDWOOD RECORD* that the club will hold its next meeting at Alexandria, La., on February 27.

Word comes by letter from the Pittsburgh Wood Preserving Company, Pittsburgh, Pa., that that company with the Ohio Wood Preserving Company, the Michigan Wood Preserving Company and the Acme Tie Company, will have general offices in the Century building, Pittsburgh.

< BUFFALO >

Horace F. Taylor is again giving his attention to the lumber business of Taylor & Crate, after spending several months helping out Uncle Sam in the purchase of lumber at Washington.

New York state officials are making it possible for farmers to use tractors for operating buzz saws to cut wood. Forty of these machines were used on farm work in all parts of the state last summer and twenty more are being purchased. All are equipped with pulleys for driving buzz saws. Conservation Commissioner Pratt is making a strong effort to increase the use of wood as fuel in order to help out the situation another

winter. He has arranged with the director of food production of the State Food Commission to have the tractors rented to individuals or to committees to produce cord wood at a nominal sum.

The lake shipyards are running at full capacity on new work, but do not seem to be interested in the increase of the lumber fleet. With less lumber moving by lake every year, and the prospects of not much being done during the next season, except where the railroads are unable to do the business, it may turn out that tonnage is sufficient. The sale of the steamers Arizona and H. E. Runnels by the W. H. White Transportation Company to Tonawanda parties shows that interest is still taken in that branch of the trade, and it is quite possible that the lumber fleet may earn as much money, according to its valuation, as any part of the lake fleet.

Ellicott Hall, built at Batavia over a hundred years ago, and a noted landmark of western New York, was recently destroyed by fire. It was a frame structure and was enclosed in 1802, so that the first sessions of the courts after the organization of Genesee county could be held there. It was not finished until 1804. It was used both as a court house and tavern until 1820, when the court crowded out the tavern. On clearing up the wreckage of the fire it was found that the old square timbers were in an excellent state of preservation, a fine testimonial to the solid construction of over a century ago. The frame was of beech timbers and part of the building had been sheathed with oak lumber before the clapboards were put on. The loss by the fire was \$22,500 and the work of the firemen was rendered difficult by a temperature of 14 below zero.

◀ BALTIMORE ▶

Letters of administration were granted on the estate of Gen. Thomas J. Shryock, president of T. J. Shryock & Co., Inc., wholesale lumber dealers, who died February 3, in the Orphans' Court February 12 to Charles C. Homer, Jr., a bank president, and William D. Waxter, son-in-law of the deceased. The administrators bonded in the sum of \$200,000, indicating a personal estate of that amount. A large part of it is said to be in life insurance. The granting of the letters revealed the fact that General Shryock left no will, and his property will be distributed in accordance with the laws of Maryland to the next of kin, who are his seven children. The lumber company, according to George F. M. Hauck, another large stockholder and close friend of the deceased for many years, will go on as heretofore, the heirs being satisfied to leave their interest in the business, though a new president will have to be elected and other unimportant changes made in the list of officers.

M. S. Baer of R. P. Baer & Co. has gone on a trip South, which will take him as far as Mobile. There he will inspect the new sawmill which the Magazine Hardwood Company, the manufacturing end of the firm, has just put into operation. The plant is of the double gang kind, with resaw, and is expected to turn out upward of 60,000 feet per day. It has an especially large power equipment, and in appearance looks not unlike the tabernacles that have been erected in various cities for Billy Sunday, having a curved roof. Construction has extended over the greatest part of a year, many delays having occurred in consequence of lack of material and for other reasons. The mill is regarded as one of the most complete in the South.

James Baer, for years on the selling staff of the firm of R. P. Baer & Co., has connected himself with the Kidd & Buckingham Lumber Company, which has a hardwood yard in southwest Baltimore and also conducts a wholesale trade. Mr. Baer, who is extensively known in the business throughout the northern territory and has made many trips into Canada, will give special attention to the wholesale end, and has an interest in the business. His numerous friends are wishing him every success in his new venture.

◀ COLUMBUS ▶

To organize the lumber and woodworking companies and plants of Franklin county, Paul B. Sisson, associated with the Western Lumber Company, Columbus, has been named chairman of this county's lumber industry division of the Ohio war savings committee. Similar organizations are being perfected in every county in the state. T. Gray, prominent Cleveland lumberman, has been named state chairman of the lumbermen's division of the Ohio war savings committee. He is devoting three days of each week at local headquarters in the organization of the lumber industry, as an agency for the sale of war savings and thrift stamps.

The Emory River Lumber Company, an Ohio organization with headquarters in Cincinnati, was authorized recently by the secretary of state of Ohio to increase its capitalization from \$200,000 to \$400,000. The increase will be in the form of an issue of \$200,000 preferred stock, according to President J. S. Walker. The proceeds are to be used in business expansion and development. The company, which was organized about a year ago, has not begun active lumber operations, but expects to begin about June 1. It controls about 20,000 acres of timberland on the Emory river in Morgan county, Tennessee. The company is at present constructing a twelve-mile railroad through its properties, tapping the Queen & Crescent system at Lansing, Tenn. It is also installing a double band mill on its property. The timber is hardwood.

The Sandusky Cooperage and Lumber Company of Gallon has been incorporated with a capital of \$20,000 to deal in lumber. The incorporators are E. E. Enderlin, J. E. Cooley, H. L. Bodley, C. M. Gerhart and D. L. Dean. Edwin E. Spencer, formerly connected with the sales force of E. E.

Want to Buy Dimension Stock

We are in the market for the following Clear Oak Dimension Stock. Must be Sound, Bright, and Well Manufactured. Slight amount of Sap no objection, but two edges should be free from Sap. Only want good Stock in every respect.

2x2—33—38—48—56—60;
also 2½x2½x30 and 3x3x30.

Also in Sound Clear SAP Gum or Maple, 2x2—56 and 2½x2½x30.

State if Red or White Oak and if it is mixed or all of one kind. Also state if green or dry and when cut.

LEAVENWORTH, KANSAS

Doddington Company and who was named a second lieutenant in the army, has been transferred from Camp Sherman, Chillicothe, to Vancouver Barracks, Washington.

The name of the Buckeye Mill & Lumber Company of Jackson, O., has been changed to the Buckeye Lumber Company.

Papers have been filed with the secretary of state increasing the authorized capital of the Lake Lumber Company, Newark, O., from \$20,000 to \$30,000.

The J. C. Yend Lumber Company, Ravenna, O., which has been in operation for several years, has been incorporated under the same name.

The capital of the Goodsell Manufacturing Company, Toledo, has been increased from \$50,000 to \$120,000. Officers have been elected as follows: Allen A. Smith, president, treasurer and general manager; Lieutenant G. Donald Smith, vice-president, and H. S. Schwartz, secretary. The concern is a jobber of sash, doors and building materials.

R. W. Horton of the W. M. Ritter Lumber Company reports a good demand for hardwoods both from factories and retailers. The worst feature of the trade, according to Mr. Horton, is transportation, which is held up by congestion and embargoes. Factories making boxes and implements are the best customers. Prices are firm all along the line.

The capital stock of the Central Lumber Company, Cleveland, has been increased from \$25,000 to \$50,000.

◀ INDIANAPOLIS ▶

The W. M. Simpson Lumber Company, Vincennes, Ind., last week held its annual banquet for its employees, all the managers of the company's yards being in attendance. According to a long custom of the company, prizes were distributed to the men who have made good business records during the year. William Steele of Indianapolis, representing the Brooks-Scanlon Lumber Company of Kentwood, La., was one of the principal speakers.

Lewis V. Boyle, a former prominent lumberman of Indianapolis, who retired several years ago when he moved to Pasadena, Cal., died last week after a long illness. He was eighty-eight years old and is survived by a widow and four children. Mr. Boyle was born in Clinton County, Indiana, and when he moved to Indianapolis established a lumber business under the name of Boyle, Cox & Co. He later moved to Tennessee, where he owned extensive lumber interests.

Fire caused a loss estimated at \$7,000 to the plant of the Kirby Wood Lumber Company, Muncie, Ind., on January 30. The company's sash and door plant was practically destroyed with its contents in addition to two carloads of shingles. The loss was covered by insurance.

Building operations in Indianapolis during January struck the lowest level in the history of the building department. The total value of operations was only \$68,072, compared with \$376,995 for the corresponding period of the previous year.

EVANSVILLE

The Evansville Lumbermen's Club, at its next meeting to be held March 12, will discuss the summer outing. There is some talk of calling off this outing in the interest of conservatism of the steamboats. During the recent freeze-up of the Ohio river and its tributaries, many valuable steamboats along the western rivers were wrecked by the ice gorges. President Worland is of the opinion that what boats are left should be kept busy handling freight.

The Karsch Lumber Co., Middlebury, Ind., capitalized at \$10,000, has filed articles of incorporation with the secretary of state. It will engage in the lumber and building material business. Directors for the first year are John H. Karsch, Ira Kauffman, Herman A. Campbell, Fred W. Gampher and Robert W. Monger.

The Evansville Furniture Manufacturers' Association has elected the following officers to serve one year: President, W. V. Dixon, Evansville Bookcase and Table Company; vice-president, Gilbert H. Bosse, Imperial Desk Company; secretary and treasurer, Ernest A. Schor, Karges Furniture Company; directors, George O. Worland, Evansville Veneer Company; Harry Sable, Evansville Furniture Company; Henry Rusche, Specialty Furniture Company, and Charles M. Frisse, Globe-Bosse-World Furniture Company.

At a recent meeting of the directors of the Owensboro Wagon Company at Owensboro, Ky., a semi-annual dividend of three per cent was declared. The past year was the best the company has ever had.

J. C. Greer of the J. C. Greer Lumber Company has been ill for several weeks, but at this writing is some better and hopes to be able to go to his office within a few days.

The old planing mill and office building of the Cottage Building Company have been torn down. The company recently moved into new quarters on South Governor street.

Fire of unknown origin on January 30 destroyed the sash and door building of the Kirby Wood Lumber Company at Muncie, Ind., at a loss estimated at \$7,000 with part insurance. Most of the contents of the building and two carloads of shingles were destroyed.

MEMPHIS

The Madison Lumber Company, which has been constructing a hardwood mill of about 10,000 feet capacity at Tallulah, La., for quite a while, reports that this has been completed and placed in operation. This company is capitalized at \$50,000. Rudolph Sondheimer of the E. Sondheimer Company, is president thereof.

The Brown Land & Timber Company, with headquarters at Rhinelander, Wis., has opened offices in the Bank of Commerce and Trust Company building here for the purchase and sale of southern hardwoods. G. W. Everts, formerly of Minneapolis, Minn., is in charge. It transpires in this connection that this company is already operating extensively in the South and that it is prepared to turn out 15,000,000 to 20,000,000 feet of southern hardwoods at its mills at Helena, Ark., Champion, Ark., and Castor Creek, La. It is establishing a log yard at West Helena, Ark., capable of taking care of about 6,000,000 feet of logs.

Lumber shippers here have been advised, through a telegram to J. H. Townshend, secretary manager of the Southern Hardwood Traffic Association, that they must secure licenses for the exportation of all hardwoods with the exception of gum to Canada. These licenses are to be obtained through the bureau of foreign and domestic commerce at Washington. This move is designed to insure that the United States will be able to secure all the hardwood lumber needed in the successful prosecution of the war.

The Gayoso Lumber Company has about completed the overhauling of its big hardwood plant at Memphis and plans to place this in operation in the immediate future. Extensive improvements have been made therein.

The Anderson-Tully Company is among the beneficiaries of the improved river conditions. It has been able during the past few days to resume operations at its mill in Memphis, at its big hardwood plant at Vicksburg, Miss., and at the plant of its allied corporation, the Morgan-West Box Company, at Madison, Ark. The Tennessee Hoop Company of Memphis, in which the Anderson-Tully Company is interested, has also been able to put its river craft in operation, thus insuring an adequate supply of elm logs for the manufacture of hoops, heading and staves of the slack variety.

J. W. Wheeler & Co., Madison, Ark., have been able to start up their machinery after extensive repairs and improvements made while they were unable, owing to the low stage of the St. Francis river, to secure ample log supplies. They have an excellent log supply now and their facilities have been increased. Among the improvements was the installation of equipment enabling the company to burn its sawdust for fuel.

W. A. Waddington, general manager of the Valley Log Loading Company, is rapidly recovering his health at South Pasadena, Cal., where he went about a month ago. Early last fall Mr. Waddington suffered a paralytic stroke and for a time his recovery was doubtful. Very flattering reports are reaching Memphis regarding his condition.

Among the conspicuous visitors to Memphis at present is J. Crosbie Foster of Williams, Richards & Co., Boundary Place, Liverpool, who is a guest of Russe & Burgess, Inc. His firm is engaged in the importation of hardwoods exclusively, but he says that the question of tonnage is so serious and that rates are so extraordinarily high that lumber importations are quite restricted. He further declares that the government is the only interest that is able to obtain anything like its requirements in the way of lumber and timbers and that, as a general proposition, importing firms, as well as other lumber companies, have had their forces badly broken by the drain made on their help by the demands for man-power at the front and behind the lines. Speaking of after-war conditions, Mr. Foster expressed the view that there would probably be some recession in prices on hardwood lumber as a result of reduction in transportation rates. However, he is a believer in the theory that demobilization is going to tie up a vast quantity of tonnage and that the change from a war to a peace basis can be accomplished only through a slow process of readjustment. He holds that there will be a large demand for lumber in England and Europe after the return of peace and is optimistic regarding the future of the importing business despite the war clouds which are lowering so black at present.

LOUISVILLE

There has been a general improvement in traffic conditions in this section within the past two weeks due to moderating weather, which has relieved the movement of coal somewhat, and enabled local shippers to move much more lumber. One operator reports that he has moved more stock in ten days than he had moved previously in two months. The general demand for all kinds of lumber is good, and orders are coming in freely. There is a big shortage of labor all through the South, and many of the mills are unable to obtain full crews, but at the same time there is a shortage of logs, and shortage of cars in which to move them to the mills, and the mill labor shortage is not being felt so much just now as

would be the case if full supplies of logs were on hand. The car supply in the South is much better than it has been for some months, and loading is fairly heavy. Embargoes have been lifted in many sections, and lumber is now moving freely to the South and West, and much better to the North. However, very little lumber is moving into the eastern section, inside of the Buffalo-Pittsburgh district.

Dawson Brothers of Louisville, who recently organized the Dawson Brothers Lumber Company, and announced that a poplar beveling plant would be located in South Louisville, have decided to pass up operations for the present, as conditions are not satisfactory. Obtaining poplar from the South and making shipments into consuming territory are hard tasks. R. L. Dawson for the present has gone back with the North Vernon Lumber Company.

J. Crepps Wickliffe, secretary of the C. C. Mengel & Bro. Company, has resigned his position to enter the government service. He has gone to Washington, where he will be connected with the Signal Corps in the army service. Mr. Wickliffe will aid in purchasing and handling supplies for manufacturing aeroplanes, and will be the assistant of H. K. S. Williams, a retired New York lumberman, who is now head of the material section of the chief signal offices of the army equipment division.

Fire damage of approximately \$50,000 was done to the plants of three woodworking concerns on February 19. Flames broke out in the plant of the Voss Table Company, destroying a portion of the veneer rooms, the boiler room, and spreading to an adjacent building used by the Embry Box Company for manufacturing boxes. A carload of boxes on a siding was also destroyed, but the blaze was prevented from spreading to the big lumber yards of the Embry Lumber Company and Embry Box Company. The loss to the Embry companies was about \$10,000, and to the table company about \$25,000. The latter concern is closely identified with the Embry interests, as several officers and directors of the Embry companies are also connected with the Voss company. The other fire destroyed the box factory of the Sunny Brook Distilling Company on West Broadway at an estimated loss of \$10,000.

Rivermen in the lower Ohio valley have been busy for several weeks in fishing out logs which broke away from mill concerns on the upper Ohio and in eastern Kentucky during the recent flood stages and ice jams. Very few logs were salvaged in the Louisville district due to high water and heavy running ice, which made it impossible to reach them. Logging concerns have been offering very high prices for salvage, but it is said that there is so much ice in the Mississippi and lower Ohio that many logs will not be caught until far South. No damage of moment was done in the Louisville section.

The second February meeting of the Louisville Hardwood Club, held

on February 19, following a meeting of the Southern Hardwood Traffic Association, was well attended and several matters of interest came up. Chief of these was discussion of a proposed eight hour law in Kentucky, this measure now being before the state legislature. Three bills have been introduced, namely the J. T. Thornton bill, H. B. 18; the Robert Bays bill, H. B. 172; and the J. A. Leach bill, senate bill, 227. No action has been taken on the latter two bills, although the Leach bill is a sister measure of the Thornton bill, a dangerous measure which proposes an eight-hour law for all classes of labor, exempting agricultural and domestic workers. The Bays bill is along the same line as the Thornton measure, except that it is directed at manufacturers, contractors, miners and railroads, but could be construed to take in all lines. The Thornton bill was favorably reported by the committee on immigration and labor, read and placed on the calendar, and later read a second time and placed on orders of the day, where it stands a strong chance of passage.

The members of the club directed the secretary to write to the district members of the legislature, and to endeavor to keep the bill from being passed. It is claimed that labor is now very scarce, and it would be impossible to obtain double shifts if the working hours were cut from ten to eight hours a day, while on the other hand government work alone needs all of the labor that can be had.

Edward S. Shippen, president of the Louisville Point Lumber Company, has gone into eastern Kentucky in the Hazard district, in an effort to locate some hardwood logs for the local mills.

W. A. MacLean, president of the Wood-Mosaic Company, has just returned from a trip to New York and Washington. The company is giving practically its entire attention at the New Albany plant to getting out government orders.

A recent visitor to Louisville was in the person of John Churchill of the Churchill-Milton Lumber Company, Greenwood, Miss., who came up to look after some of the company's local business.

After spending two weeks at the mills at Holly Ridge, Monroe and Meeker, La., E. B. Norman, president of the Holly Ridge Lumber Company, is back at his office.

Immediately following a trip of inspection to the company's Arkansas mills, J. G. Brown of the W. P. Brown & Sons Lumber Company, Louisville, left for a visit to the mills at Fayette.

W. R. Willett of the W. R. Willett Lumber Company has gone to New Orleans on a short business trip. Harry Roy of the same concern has been in the South for several days looking for lumber.

Shippers of lumber in transit were hit hard in some cases by the embargoes and heavy snowfalls, which resulted in a lot of transit lumber being disposed of to jobbers and consumers at low prices in order to

avoid paying high demurrage charges. Several manufacturers and jobbers of Louisville managed to pick up some excellent lumber at under the market as a result.

McCannon & Keller of Lebanon, Ky., have received a good government contract for spokes, and have leased the old plant of the Columbia Column Company at Lebanon, and installed machinery to manufacture spokes. This concern has been operating a sawmill near Lebanon, and has arranged to obtain most of its timber requirements. The spoke plant will employ about fifty men when running full.

◀ ARKANSAS ▶

The next annual convention of the Arkansas Association of Lumber Dealers will be held in Hot Springs on Friday and Saturday, June 7 and 8, 1918, according to the decision reached at the district meeting of the association, which was held in the Marion hotel at Little Rock on February 5. J. B. Webster, secretary of the association, also the vice gerent snark for Arkansas in the concatenated order of Hoo-Hoo, has announced that a concatenation will be held in connection with the annual in Hot Springs on the night of June 8. He has conferred with E. D. Tennant of St. Louis, secretary-treasurer of the order, and plans are being laid for a big state gathering. Mr. Tennant and Snark Priddie of Beaumont, Tex., are expected to be present.

The district meeting was well attended, interest was keen, and all appeared to enjoy and profit from the one-day session. J. C. Dionne of Houston, Tex., secretary of the Texas Lumber Dealers' Association, was the principal speaker and conducted a class in lumber retailing. He advanced some excellent and progressive ideas, and predicted a revolution in selling lumber at retail, saying that the time was soon coming when houses complete would be sold by a merchant selling the completed job, just as an automobile dealer sells a completed car, and not the various materials or parts that go to make up an automobile.

The Saint Francis Valley Lumber Company is the name of the new corporation recently organized at Piggott, Ark., with a capital stock of \$40,000. The new corporation will deal in real estate and manufacture, buy and sell timber and timber products, especially lumber and staves. This concern is to all intents and purposes the successor of the old T. A. Foley Lumber Company, which has been operating at Piggott for the past few years. The officers of the new company are B. R. Bertrand, president; O. R. Bowman, vice-president, and H. W. Powell, secretary and treasurer. T. A. Foley and the officers named constitute the board of directors, while the other stockholders are H. L. Hodge, F. G. Foley and R. G. Southerland.

E. A. Fisher, A. P. Hayes and G. E. Wilson of Michigan have purchased the old Schussler stave and heading plant at Clarendon, Ark., and announce that they will remodel and overhaul the entire plant. They say the work of rebuilding will be rushed and that the plant will soon be ready to operate, turning out the same kind of stock as heretofore, namely, slack barrel staves and headings.

◀ WISCONSIN ▶

The Roddis Lumber & Veneer Company, Marshfield, Wis., has established a department of women's welfare to accommodate the increasing number of female employes in the plant, due to the shortage of male help. Miss Marian R. Knox, Ralston, N. J., has been employed as supervisor of women's work.

John Tracy, Appleton, Wis., manufacturer of hubs and spokes, has purchased the oak, basswood and pine timber on a forty-acre tract of land at Kaukauna, Wis., from the Green Bay & Mississippi Canal Company. It is expected that the tract will yield 100,000 feet of logs and 3,000 cords of cordwood. A contract for cutting the timber has been let. Mr. Tracy also has purchased 250,000 feet of birch logs near Monico, Wis., which already are beginning to arrive in Appleton by rail and insure an adequate supply of material to keep the Tracy plant busy for the rest of the year.

The Northern Casket Company, Fond du Lac, Wis., has increased its capital stock from \$200,000 to \$600,000 to accommodate the rapid growth of its business and output during the last few years. The company originally was organized as the Nehrbass Casket Company with a capital stock of \$100,000. In July, 1909, the name was changed to the present style, and in July, 1913, the capital was doubled. In addition to the Fond du Lac plant, the company owns and controls large plants in Denver, Colo., and Sioux City, Ia. William Mauthe is president and general manager.

The Appleton Chair Company, Appleton, Wis., which recently purchased a tract of hardwood timber near Eagle River, Wis., is now receiving on an average of three carloads of logs by rail each day. A camp with thirty men has been at work on the tract for more than a month and taking out all maple and birch timber and expects to supply the Appleton plant with from 100 to 125 cars of logs during the next sixty days.

To gain the advantage of keeping its entire facilities occupied twenty-four hours a day, the Abnapee Veneer & Seating Company, Algoma, Wis., recently split up its working force into two shifts and has thereby practically doubled its output without being obliged to seek additional help under present conditions of an acute shortage of labor.

Andrew Kaul, Jr., & Co., Merrill, Wis., have reopened their hub and spoke plant and are employing a crew of forty men. Logs are being received almost every day, and it is hoped to keep the plant in continuous operation until next winter.

The Jenkins Machine Company, 315 North Eighth street, Sheboygan, Wis., manufacturing woodworking machinery and equipment, has started work on the erection of a two-story shop addition, 45x65 feet in size, made necessary by increasing demands for its products. The new facilities will be ready about April 1.

Milwaukee and Chicago capital, represented by Charles Friend, Bernard Rosenow and A. E. Kopps, Milwaukee, are completing details for the organization of the Badger Chemical Company, with a capital stock of \$500,000, to establish a series of charcoal and chemical plants in the vicinity of Stanley, Wis. The company already has contracted to clear all timber and brush from 25,000 acres in the Stanley country during the next five years. The wood will be converted into charcoal, potash, alcohol and numerous other chemical by-products. The main plant will be located in Stanley, where a tract of fifteen acres has been acquired.

The Bekkedal Lumber Company, Couderay, Wis., believes a new record for log deliveries with a creeper type of steam log hauler was established when J. F. Crandall, the company's tractor engineer, brought a load of eighteen sleighs, each containing a little more than 4,000 feet of logs, to the Couderay mill from the camps.

The Mellen Lumber Company, Mellen, Wis., has issued orders that no more free lunches be served to visitors at its logging camps in the vicinity of Glidden, Wis. For several years the company extended this hospitality to camp visitors, but the practice recently has been abused and, in addition, the needs of food conservation have made it advisable to discontinue the practice.

It is believed likely that the unusual capacity of sash, door and interior woodwork factories in Milwaukee and immediate vicinity will soon be devoted to the manufacture of airplane parts and complete aircraft for the government, if the efforts of the Milwaukee County Council of Defense bears fruit. Due to the slackening of ordinary building operations, the interior woodworking factories are anxious to devote their facilities to other lines for which the equipment is suitable. Heretofore the government refused contracts for airplane materials to these concerns because of the lack of adequate assembling facilities, but there now is available a suitable plant in Milwaukee county for assembling and testing aircraft, and this has been offered to the government. In view of the urgent need of additional facilities for pushing the government airplane program, it is hoped that the offer will be accepted.

The Northwest Engineer Works, Inc., Green Bay, Wis., has been organized by H. G. and L. H. Barkhausen of that city to take over and enlarge the marine engineering and shipbuilding plant of the Hartman-Grelling Company, Green Bay. Four berths will be installed, making a total of six. The Barkhausen interests recently closed contracts with the federal shipping board which insure continuous operation of the enlarged plant at maximum capacity for a year and a half to two years. The company will build wooden, wood and steel and all-steel ships suitable for both Great Lakes and ocean service, complete in all details.

The Hatten Lumber Company, New London, Wis., expects to drive at least 250,000 feet of logs down the Embarrass river during the coming summer. Some time ago it was announced that the 1917 drive was the last, but in view of the existing conditions of railroad traffic and equipment, it has been decided to take advantage of the water route with at least one more drive.

The Silent Washer Company, Clintonville, Wis., is now operating its new power and manual washing machine factory. Robert Fischer has retired as secretary and treasurer and J. L. Zehms, general manager, has been elected secretary. Max Steig becomes treasurer. G. W. Buttles is works manager.

C. W. Carlson, cashier of the State Bank of Oconto Falls, Wis., has been elected a director of the Union Manufacturing Company of that city, to succeed A. Lipschultz, who resigned.

The Northern Furniture Company, Sheboygan, Wis., recently presented each employee with a thrift card containing two 25-cent thrift stamps as a gift calculated to promote war savings.

The Gold Medal Camp Furniture Company, Racine, Wis., has divided \$20,000 in cash among its 150 employees as a bonus on 1917 earnings. The amounts ranged from \$25 to \$300, according to length of service.

Charles Good, for several years superintendent of the Oconto Company, Oconto, Wis., has received a commission as first lieutenant in the U. S. Forestry Engineers' Corps and left February 18 for Washington, D. C., to report for active duty. Lieut. Good is a son of F. W. Good, superintendent of the Bay de Noc Lumber Company, Naima, Mich., and a graduate of the University of Michigan.

James W. Hubbard, for twenty-one years general manager of the McDonough Manufacturing Company, Eau Claire, Wis., manufacturing sawmill and woodworking machinery, has resigned to accept the general management of the United States Switch Company, Eau Claire, which he recently helped organize and of which he was elected president at that time. His successor has not yet been named.

Miss Lonna Parker, daughter of Frank H. Parker, president and general manager of the Mueller & Son Box Company, Milwaukee, was married recently to Herbert Segnitz, a widely known real estate man of Milwaukee.

P. S. McLurg, president of the Kneeland-McLurg Lumber Company, Phillips, Wis., left recently with Mrs. McLurg on a two months' sojourn in the sunny South. It is Mr. McLurg's first vacation in more than five years' time and was made necessary by his long and close application to his duties. A trip to Cuba is part of the itinerary of Mr. and Mrs. McLurg.

The Hardwood Market

< CHICAGO >

A slight tendency to shipping improvement is remarked locally. Better weather has helped materially and the confidence is generally expressed in this market that with the advance of more open conditions the centralized control of freight movement will make noticeable progress toward straightening out the shipping tangle. The many unusual influences have made it impossible to get straightened away on a clear cut analysis of what the local buying situation is, but at present the outlook still seems mixed. The box makers lead the list in demand for lumber, this trade being featured by a shortage of necessary material. On the factory end the greatest uncertainty exists, conditions here varying with the individual products and conditions surrounding markets in each case. In industries dependent upon building there is a growing hope that the spring months will see more building made possible by imperative necessity, while among the factories some people report considerable activity in sales, while others are unable to keep running on full time. War work is filling an ever more important place as a consuming factor.

< BUFFALO >

The embargo situation is the chief source of complaint in the hardwood trade. Business is fair, but would be much better if it were possible to accept all the orders received. It is almost impossible to ship to any great distance and much delay occurs in the arrival of stocks from the mills. The war factories are in need of considerable stock, particularly for the manufacture of airplanes, automobiles and ships. Prices on most woods are holding strong and everything that can be used is in ready demand. A large sale in crating stock of various woods is also reported.

The building trade, outside of the construction of factories, has been disappointing so far this year, though the outlook appears to be as favorable as a year ago. But funds for speculative construction are not available in large amount and are not expected to be this spring. The furniture trade is also on a rather light basis and the furniture men are having much difficulty in making shipments because of the shortage of cars as well as the numerous embargoes. Some furniture and other woodworking concerns are giving their attention to war work and so manage to keep busy.

< PITTSBURGH >

The market for hardwood is confined chiefly to the industrial trade and to small manufacturers of furniture, handles, etc. The yard trade is not taking hold worth a cent so far. Retailers are not yet ready to talk business in lumber buying. They prefer to wait until they can size up better the building situation at a little later date. Glass factories are taking only a fraction of the hardwood that they formerly used.

The big demand is from furniture and handle factories. The former find it very difficult to get high-class stock that is dry and can be secured promptly. The latter are scouring the country for little tracts of hickory and other woods, and are taking now many lots of timber that would have been turned down five or ten years ago. There is a great demand also for maple flooring.

Few changes have been made in wholesale prices the past month. In fact, wholesalers have been laying on their oars and only this week have they begun to get their men out on the road.

Joseph W. Cottrell of the Cottrell Lumber Company, which has a splendid hardwood trade with industrial concerns of this city, is down South this week looking over stocks at the mills.

The enormous demand for mine props along the Baltimore & Ohio and Pittsburgh & Lake Erie railroads is causing every kind of hardwood timber in northeastern Ohio to be slaughtered this winter on account of the prices being paid. For hickory and oak prices are far higher than were ever paid before, and the big question is whether a lot of this timber will pass inspection when it comes to the final consumer.

The American Lumber & Manufacturing Company is very busy on its shipments of 21,000,000 feet of ship timber which the Government bought for delivery by next June. A large part of this timber will come from the company's big hardwood operation at Lenox, Ky.

< BOSTON >

The situation of the hardwood trade in New England is very much involved with the transportation question, and its effects on all business. The coal supply has failed to improve and restricted operation has covered most industries even to those on urgent war orders. This statement is sufficient to indicate the difficulties here, the consequences of which will depend largely on future developments. Dealers are finding opportunity to get in a little long distance stock and locally produced or stored lumber is moving in volume and price on a scale never before contemplated. The trade shows every evidence of underlying strength and a disposition to "carry on" no matter what conditions are. One large hardwood yardman is quoted as feeling able to meet any of the commercial handicaps imposed except the problem of deriving and paying the several state and national tax obligations.

< BALTIMORE >

The members of the hardwood trade, along with other lumbermen, are up against it in the matter of transportation. Whatever business they might be able to get is blocked by the railroads, which are unable to supply cars and seem to find it impossible to move them, even when they have been loaded or unloaded. Of course, the demand has been affected somewhat by the policy of the government in subordinating everything to the war industries and, lately, to the shipbuilding program. Nothing that would tend to interfere with the activity at the ship yards, such as curtailment of supplies, is encouraged by the federal authorities, so that it is often out of the question even to have stocks of hardwoods accepted for shipment by the railroads, even though a government permit may have been obtained. This reduces the distribution to decidedly small proportions, with no prospect that they will be expanded in the near future. Of course, the milder weather is distinctly in favor of a revival in the trade, or at least of a somewhat enlarged movement. The railroads have no snow blockades to fight now, or is it necessary to buck up against other extraordinary obstacles, and they can give their attention to the movement of freight to a degree that appeared to be out of the question during the period of intense cold and snow. But in various ways the volume of business is held down to small proportions. To be sure, there is no prospect of a congestion of stocks even at producing points, for the same causes that hampered the dealers have also interfered with production, and the saw mills have fallen far below their normal output. Whether they will shortly get back to something like the old output remains to be seen. It looks now as though the labor question would become as troublesome as other retarding factors have been in the past. With the government holding all manner of inducements to workers, there is every prospect that it will be made utterly impossible for private employers to compete in the matter of wages and otherwise; for anyone at all willing to work can get employment at one of the munitions factories or on government projects and obtain far higher wages than a saw mill can afford to pay. It may be said that on all stocks which the sellers can deliver they are in a position to get very attractive prices; but the orders taken are relatively few in number for the reason that there appears to be no way of filling them. The high level of values applies to every division of the hardwood trade, and in recent weeks even the box makers have been in the market for almost anything that would serve their purposes in the way of the lower priced hardwoods. The information from abroad seems to be to the effect that a still further narrowing of foreign shipments may be looked for, the British and other governments holding down their requirements to the lowest possible limit.

< COLUMBUS >

The hardwood trade in central Ohio territory has ruled rather firm during the past fortnight. Demand from factories is the best feature, although quite a number of inquiries are received from retailers. While transportation is still bad, some improvement has been reported in places. On the whole, the demand would be better were it possible to make shipments more promptly. Prospects are for a continuation of the tight transportation situation.

Retailers have only fair stocks and there is a disposition to order for March and April delivery, if delivery could be assured. As it is some of the dealers are taking a chance and are placing orders. Others are holding off to see what will develop. Building outlook is slightly improved in central Ohio territory and a few buildings are under consideration. Some dwellings, apartments and business blocks will undoubtedly be constructed. Rural dealers are buying fairly well, as prospects for construction work in the country districts are good.

Box and implement factories are the best customers among manufacturing establishments. Furniture factories are also in the market for some stocks; but as a whole buying on the part of factories is for immediate needs only. Collections are not as prompt as formerly.

Quartered oak is in good demand and prices are unchanged from a fortnight ago. The same is true of plain oak. White oak is higher than red oak. Chestnut is strong, especially the lower grades. Poplar is in good demand and the same is true of ash and basswood.

< CLEVELAND >

Fears that many hardwood plants in the flats would be damaged by flood should the Cuyahoga river rise beyond the high water level were allayed last week when a warm spell loosened up the ice in the lake sufficient to allow the water to pass out. This warm spell also served to bring out some buying for construction under way, which had been held up on account of the cold weather. Shipping has not improved, but with what little buying was brought out the market for hardwoods as a whole is firmer, though not actually changed. The outlook for hardwood use now is a sort of flash in the pan effect, as absence of improvement in financial conditions does not make for good prospects for new work. The several Cleveland jobs under way therefore can be depended upon to be the principal consumers of material. There has been a slight weakening in maple flooring, but not enough to affect prices. Oak flooring is a bit firmer, but also held at former figures. In these lines it is believed the principal demand will be noted when the real spring drive starts. Transits are coming into Cleveland in a limited way only. Cars are almost as scarce as ever.

The following stock is in excellent condition, ready for immediate shipment

For Every Reason

Now is the time to buy timber. Market values are already on the up grade. They would be due for a rise even if times were normal.

Under present circumstances the upward pressure is doubly strong.

Buy Timber Now!

The war, when we were out of it, promised a great market for lumber in the near future. Now that we are in the war the demand is heavy, immediate and pressing, with promise of after-war demands greater than before. Everything points with unmistakable directness toward investments in timber now—today.

We have or can get what you want.

< INDIANAPOLIS >

Business conditions have been improved during the last week. Weather conditions are more favorable and many plants that were closed during the blizzards of December and January are in operation again. Transportation conditions are slightly improved and railroads are promising a larger supply of flat cars. Very few logs are being hauled to the mills as yet because of bad roads, and high water has handicapped mills depending on water transportation for their supply. These conditions are improving rapidly, however.

The trade reports an increased demand. Consuming plants that are working on sub contracts for the government are heavier buyers. Furniture industries which have been hampered in their operations as a result of traffic conditions and the coal shortage are buying more heavily. Better weather also has aroused interest among retailers.

The belief prevails quite generally that hardwood prices are destined to become higher soon because of the higher cost of logs and other materials.

The call for quartered white oak is strong and the demand for thick plain oak is increasing also. The gum demand is improved.

< EVANSVILLE >

Trade with the hardwood lumber manufacturers of Evansville and southern Indiana has been picking up for the past week or ten days and in the opinion of both manufacturers and retailers, business will continue to improve as spring advances and weather conditions get better. Logs have been coming in more freely, there are more flat cars and manufacturers ought to receive all the logs they want from this time on. Mills in this section are gradually resuming and two of the largest hardwood mills in Evansville are now being operated on steady time. Orders are coming in thick and inquiries are more numerous than they have been for some time. Prices are holding firm with a tendency to increase. Quartered white oak is in good demand, as are most of the first class grades of hardwoods. Collections are good. General trade conditions are better and the car shortage is not so serious at it was. The various wood consuming factories in Evansville are running on better time. Furniture factories are busier than they have been any time during the present year. Veneer manufacturers report the outlook fairly good. Building operations are picking up some. In the opinion of architects and contractors there will be a big improvement in building after the first of March. Planing mills are fairly busy and sash and door men report trade looking up some.

< LOUISVILLE >

Orders are now coming in fairly well for almost all grades of lumber. The furniture and automobile manufacturers have been buying more freely, and there is a good demand from the talking machine manufacturers and some other cabinet workers. Hardwood flooring is rather weak just now, but such lines as are not active are not affecting the general demand much, as the government demand is so heavy that all lines are active. Thick oak and ash are especially active, with a steady call for poplar, cypress, hickory, maple and elm. Mahogany and walnut are very active, and are in big demand for manufacturing gunstocks, aeroplane stocks, and other government requirements. Veneer mills report general activity, and a good demand for glued-up stocks, while the panel plants are all operating to capacity. Interior trims have not been very active, due to the fact that there is very little building underway and very little in sight. It is claimed that with the exception of plant additions and cheap residences, there is very little building in sight for some months to come. However, gum, which has become of much importance in interior work, is in good demand, with prices high and advancing. Prices on all hardwoods are strong, with indications of becoming higher as transportation facilities improve, and the demand begins to move stock more freely.

< MILWAUKEE >

Although the unfavorable railroad freight situation has been a thorn in the side of the northern hardwood lumber industry for many months, the shortage of cars and general congestion at terminals in recent days has had a particularly depressing effect upon manufacturers of furniture and other woodworking plants in Wisconsin. The condition is illustrated by the case of Sheboygan, a center for the manufacture of hardwood products, where factories are 200 or more cars short of immediate needs and warehouses are piled to the roofs with marketable goods. The ordinary daily needs are forty cars, but for weeks less than half this number has been available. The same complaint is heard from other localities, while sawmills in the North find increasing difficulty in getting sufficient rolling stock to keep manufactured lumber moving according to delivery specifications. At the end of January, forty-three large mills were nearly 12,000 cars short of requirements. A heavy snowstorm of February 15 and 16, which was especially severe in the North, has increased the seriousness of the situation.

Prices on all grades of hardwood are holding firm all along the line and the tendency continues upward. The sharp advance in logging costs is now beginning to be reflected in manufactured lumber prices, but its full force probably will not become apparent for several months longer. The demand at mills continues to be far in excess of the supply. Retail yards are buying sparingly, due to the government's suggestion that building operations be curtailed. The industrial demand, however, continues good, but is predicated largely upon government requirements.

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany & Qtd.-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

CENTRALIZE YOUR PURCHASES

The principles of factory economics demand the minimum of waste effort. Obviously effort can be saved by placing your orders as nearly as possible in one direction. Of course we can't supply the entire hardwood market, but with

Our own timber

Our own log transportation

Five big band mills

Half a dozen veneer machines

Big panel factory

Carefully trained labor that we have been able to keep

We are able to concentrate your shipments largely from one point.

We Cut 70,000,000 Feet of Hardwoods a Year

A company handling your whole list or a large part of it can operate more economically and smoothly with minimum prices and maximum service for you. This economic truism holds in your business—why not in ours? Try it out on your present needs, which we can supply in

HELP

If you own any Walnut timber or know of anyone who has some suitable for making gun stocks to supply the boys who are going to Europe to fight for

UNCLE SAM

you will render a valuable service to the Government and your fellow Americans by telling us where the timber is located and how to reach the owner.

Walnut gun stocks are urgently needed to complete the necessary rifles for our army. The metal parts are being made on schedule but there is a serious shortage of stocks because the owners of Walnut timber are not offering it for their Country's use.

Our boys must have guns before they can go over and fight.

Tell us of any Walnut timber you know of and we will do the rest.

Let's all work together for the accomplishment of our one great purpose -

THE GOLDEN RULE

Michigan Hardwoods *Cadillac Quality*

Nature has been generous in supplying Cadillac an abundant supply of superior timber and we are supplementing her work with the best methods of manufacture.

This has made Cadillac Quality famous.

Good timber, lumber well manufactured and seasoned, grades that are reliable and not blended to meet price competition, punctual service; — these are the elements of Cadillac Quality.

We sell direct to responsible dealers and manufacturers.

Theo. Fathauer Co., of Arkansas

HELENA

ARKANSAS

THE Theo. Fathauer Company of Arkansas is the operating subsidiary of the Theo. Fathauer Company, main office 1428 Cherry Ave., Chicago, the mill being located at Helena. Theodore Fathauer is president of the company, J. P. Swift, secretary, and Paul C. Swift, treasurer and manager. The capital stock is \$100,000.

The company manufactures fifty per cent gum, the remainder being oak, ash and maple. It logs its own timber from a twelve thousand acre tract near Ratio, Ark., hauling the timber on tram road about fifteen miles long, connecting with the Iron Mountain.

The mill cuts fifty thousand feet daily, turning the logs into lumber on the day they arrive at the camp, thus insuring bright, clear stock. The output is furniture material, implement and automobile stock, and low grade for box factories. The mill has excellent equipment and the yard usually contains three to four million feet of stock. The company employs about two hundred and fifty men at its Arkansas operations.

Integrity Quality Service Efficiency

It is these vital sparks of industry that are keeping the lights burning and the wheels humming at Helena. It was the steadfast adherence to these principles that has made Helena the greatest producing center of Hardwoods and Hardwood Veneers west of the Mississippi river.

The satisfaction of profitable trade binds our customers to us. From all Hardwood consumers who appreciate a product in which these qualities are inherent, we respectfully solicit correspondence.

The golden oak which grows in California, is not so named because of the color of its wood, but on account of the yellow fuzz on the under side of its leaf.

B & C—
We Manufacture Hardwood From Fine West Virginia Timber.
WARN LUMBER CORPORATION W. V. A.
Raywood,

White oaks ripen their acorns in a single season, while those of red oaks hang on the trees and grow during two summers. They are usually quite small at the close of the first growing season.

Yellow Poplar Lumber Company
Coal Grove, Ohio
Manufacturer

Oak makes the heaviest of bridge timbers or the finest of period furniture. Is there any other wood so versatile?

The color of the artistic English wood known as brown oak is said to be due to incipient decay which has spread through the texture of the wood.

There are no new problems to overcome in curing or caring for Oak lumber. It has been too long used.

A & B—
If you want Sound, Soft Textured White & Red Oak, both in Plain and Quartered, write
DUHLMEIER BROTHERS & CO., OHIO

The hardness of oaks vary as much as 50 per cent when they are compared among themselves, and there is no less difference among different species when their strength is under consideration.

TRY KNOXVILLE TENNESSEE

You can logically do so because you must ultimately depend more and more on this region for your hardwoods.

No higher type of timber can grow than that abounding in eastern Tennessee. It is found on a soil and in an environment which put quality in the trees generations ago. It is our task merely to see that this quality is utilized to the utmost in making the boards you buy. The best of equipment and highly trained organizations working in one place for years at a stretch make that task easy.

Then too you can be sure of getting the best possible service—always.

Ask about it from any of the following:

The Vestal Lumber & Mfg. Co., Knoxville, Tenn., & Fonde, Ky.

The J. M. Logan Lumber Company, Knoxville, Tenn.

The Little River Lumber Company, Townsend, Tenn.

The Babcock Lumber & Land Company, Marysville, Tenn.

(Main Office: Pittsburgh, Pa.)

Walnut, Chestnut, Hickory, Cedar, Ash, Basswood, Beech

MEMPHIS TENNESSEE

THE WONDER CITY OF HARDWOOD PRODUCTION

Agricultural Implements

Railroads and modern agricultural implements came into use about the same time. The implements produced more farm products and railroads carried them to distant markets. The days of farming with hand tools were numbered. Quicker and better supplies of food caused the rapid growth of cities. One farmer, with power plows, reapers and threshers, could feed fifty people as easily as he could feed five before. It is said that today in Texas and Louisiana one rice grower with power machinery can produce as much rice as 400 men can raise in India where hand tools are still in use.

Wood has always been important in farm tools, but its importance has greatly increased since agricultural implements have come into wide use. Search for the most suitable woods goes on as industriously now as in the days when every farmer depended upon his own efforts to supply what he needed for tools. A larger assortment of woods are in use now than formerly because they are brought together from widely-separated regions. Of course, the total quantity is much larger than in the days of hand tools. Two feet of wood sufficed to make a flail, but forty times that much is needed for a threshing machine. Only two kinds of wood could be used in a single flail, but a dozen or more kinds enter into the construction of a modern threshing machine.

To be continued

VIEW OF MILL AND YARDS MEMPHIS PLANT

OUR facilities for the proper manufacture of HIGH GRADE HARDWOODS are the best.

OPERATING two large band mills affords our customers a regular source of supply and certainty of securing the same texture of stock last shipped.

ONLY experienced lumber inspectors employed, shipping correct grades at all times.

OUR location assures prompt service.

Gayoso Lumber Company

MEMPHIS, TENN. ————— BAND MILLS ————— BLAINE, MISS.

"Running Rehaults Thru the Rough"

That's the title of the timely tale which will be the "headliner" in LOGGING for FEBRUARY. It tells how Shep. Bridgewater runs his rehaults thru heavy scrub oak in logging the Groveton Mill of Trinity County Lumber Co. at Groveton, Texas. You should read this story—and all the other good things in this number!

Let us send you a FREE COPY.

CLYDE IRON WORKS

Duluth, Minn.
U. S. A.

Designed for mountain logging and other conditions under which ground skidding is impossible. Costs less, needs a smaller crew, gives greater **working** time and larger capacity than any other similar machine on the market.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

Review and Outlook

General Market Conditions

INDICATING THE GROWING CALL FROM THE GOVERNMENT for hardwood stocks, the latest word on wagon construction shows a total of 240,000 army wagons and a million extra wheels already ordered. It is estimated that this will call for some 300,000,000 feet of thick stock which will have to come from fine logs, carefully manufactured and taking the cream of the mill production. The word coming from every direction heralds a growth of war business that will make the past and present consumption appear insignificant in comparison. Such business is of especial importance in that it is mostly specialized and to a large measure it demands a selection of choice stock. In fact, much of the material is of such nature that the ordinary lines of commercial stock cannot be manufactured to any great extent in conjunction with it.

In the face of all this government business, normal industries seem to have kept up their sales to a remarkable degree, and it has recently been authoritatively stated that while January furniture markets showed sales of only fifty per cent of normal, this does not indicate the condition of sales for the remainder of the year, as wholesale buyers of furniture are following the same policy as buyers in all other lines, i. e., they are not meeting needs for very far in the future. Furniture trade will be compelled to hustle after business for the remainder of the season, but according to the best evidence there is a strong likelihood that the aggregate when the season is closed will show a pretty close to normal turn-over of stock. The greatest trouble in the furniture and similar industries has been the difficulty in getting shipments. It is stated that there are several hundred carloads of furniture stored in Grand Rapids awaiting shipment. The same undoubtedly holds in all other producing centers.

On the other hand, there are certain industries where the production of commercial commodities directly interferes with production of government business. For instance, there is a rumor going about that within thirty or sixty days the government will arbitrarily stop the manufacture of pleasure cars and turn over to the production of war vehicles the entire facilities of the automobile factories. There is no definite statement on this score although the recent curtailment in this direction practically halving the authorized production of pleasure automobiles, signifies what might come later. So far as this having a deterring effect on hardwood sales is concerned, it will probably, as a matter of fact, have the opposite influence, as the war vehicle seems to require more wood in its construction than does the pleasure vehicle.

Close analysis of stock reports shows steadily increasing prices

and growing shortages in a good many of the standard lines of hardwoods. In fact, there seems to be hardly an item showing any accumulation, nor does there seem to be the slightest chance that hardwood prices will not continue to show strength. There is a definite movement on foot in hardwood circles looking toward the working out of definite cost figures which if compiled will undoubtedly reveal such startling increases that manufacturers will be strongly fortified in their contention that they must get more money to break even.

Promise of car relief having failed to materialize so frequently in the past, similar promises now are taken as something to be desired rather than to be expected. However, there is a more definite tone to the reports of greater ease in shipments that are coming from some sections, although in other originating points of hardwood shipment the greatest pessimism prevails on the question of adequate transportation facilities. In the Memphis territory the railroad companies seem to have fallen down miserably on their promises to give more cars for the handling of logs and as a result the production in many plants in that region is threatened and millions of feet of logs stored ready to load are menaced by inability of the railroads to supply sufficient log cars. The moist, warm season is rapidly approaching in southern woods and before very long it will not be safe to leave logs in the woods for any length of time.

A notable development is the increased demand for oak for commercial purposes. Oak veneer is going fast and lumber to go with it is feeling a similarly increased call. Buyers have come to understand how the government needs for high grade oak will affect the supply of commercial stock, and many of them are protecting their future requirements by buying now. Rotary veneers continue sky high with prices still going up. This holds in all lines. Low grades for boxes and crating are not procurable in sufficient quantities to meet the call, and needless to say, there is no question as to price on this material.

Want Legislature Abolished

IF THE PEOPLE OF MISSISSIPPI are correctly represented by a bill recently introduced in their state legislature, they want that body abolished, or, at any rate, want a chance to vote on the question of abolishing it and substituting in its place a commission form of government consisting of thirteen members.

Cities have tried the commission form of government, with some successes and some failures, but Mississippi appears to be the first state that proposes to dispense with its legislature and try a commission. It was hardly to have been expected that the experiment would

be tried in a southern state, for southern states are considered rather conservative and slow to change established customs for new. The vote, either on the bill in the legislature or on the measure by the people at large, has not yet been taken.

The bicameral plan of state legislation will be maintained by having eight commissioners stand in place of the present lower house of the legislature, and five for the senate. The commissioners are to be chosen on the basis of congressional districts and from the state at large.

The experiment, if it goes through, will be watched with interest. There is no question that much dissatisfaction exists with state legislatures, not in principle, but in practice. They are expensive and often are composed largely of a rather incompetent class of men, with little disposition or power to do good, and capable of doing much harm if they become subservient to corrupt men, stronger than themselves. Legislatures are noted for their slowness and their penchant for verbosity and debate. Weeks and months are fooled away in talk, and the people pay the bills.

But would a commission do any better? It has one advantage in that it does not contain so many persons, and the time spent in airing individual opinions ought to be shorter; but that depends largely upon the kind of men. Two or three hot air artists can talk as long and say as little as a score, and they could do the talking as well in a commission as in a legislature.

The most serious objection that has been urged against a commission form of government is that the commissioners being so few, they are in more danger of bribery than are the larger numbers composing a legislature. That objection undoubtedly should be given some weight, but experience has not shown that bribery scandals are any more frequent in commission rule than in any other kind. The facilities of a commission to economize in time and to save money for the public are the points that are given most weight with the people.

Costs and Other Things

ELSEWHERE IN THIS ISSUE appear two articles, one an interview on the thick oak controversy, the other a common-sense appeal to the hardwood interests to get together on cost figuring and find out what the true cost of producing is. These articles are commented on together because they have the relationship of cause and effect. As stated in the cost article there would have been no controversy on the selling price of the vehicle oak had the lumbermen always known just what their expense was in producing and just what they would have to sell for. They are nearer to that knowledge today than ever but the rule of thumb methods of some minimize the benefit from the most careful figuring of others. The plea contained in the article merits immediate action.

The official interview on the thick oak argument leaves a good deal to be desired by the lumbermen. The interview, however, clearly states that the prices offered were not determined by investigation of manufacturing cost although the vehicle committee states it desires and has attempted to enlist coöperation from the hardwood men. The fact remains though that those selling the material had no hand in setting the figures. It is claimed that the prices represent the market but they surely do not coincide with available, official figures for the same items as published at present.

The vehicle committee is undoubtedly sincere in its assertions of desire to coöperate but the very best way to evidence that sincerity is to make a real effort to find out if the unanimous claim of the hardwood men that the prices are too low, is not entitled to as much weight in the matter as is the vehicle man's judgment of what it costs to produce lumber.

Germany's Mortgage

A GERMAN STATESMAN, representing the war party in that military country, recently made a speech which was evidently intended for home consumption only; but a report of it escaped the censor and reached the outside world. He declared that unless Germany could

defeat her enemies and collect from them enormous indemnities, the country would be bankrupt for years to come. The empire's debt at present, according to his figures, is \$32,000,000,000. To carry that debt, in interest and sinking fund, will call for a yearly tax averaging seventy dollars for every man, woman and child in Germany. It will not be possible for the people to raise that sum of money yearly; so, he says one of two things must be done. An indemnity must be collected from enemies, or if that cannot be done, the property of Germans must be confiscated. The confiscation would not fall on the rich alone, but would take estates as small as \$2,500. That means that practically all the property in Germany would have to be put on the block and sold by the sheriff. Who would buy it?

When the kaiser turned the war loose in 1914 he thought six months would see it through and that he could collect sufficient indemnity from conquered enemies to pay all his debts many times over. His plans fell through, and he now finds a mortgage on his country. The word mortgage means "death grip," and that is about what the kaiser is finding it to be. He brought it on himself and on Germany and they will have to stand it; and every day the war lasts only draws the "death grip" tighter. It will not be the allies that will destroy Germany; it is destroying itself. Though the close of the war will find the allies terribly in debt, they will be in good financial condition compared with Germany. No wonder that Hindenberg would willingly sacrifice a million men on the west front in an attempt to get Germany out of its predicament.

The Country's Supply of Iron

THEY HAVE BEEN COMPILING FIGURES on the supply of iron ore in the United States and estimating how long it is likely to last. The prophecy was made in 1902 by Andrew Carnegie that within sixty or seventy years from that time, the good deposits of iron ore would be exhausted. That forecast has been quoted with apprehension in view of the fact that the ore is being used nearly twice as fast now as when Mr. Carnegie announced his pessimistic prediction.

This is looked upon somewhat differently from the warning that timber is approaching exhaustion, because the situation would be more serious. When iron has been taken from the ground, it is gone forever, but when one forest is cut, another can be grown in its place. The exhaustion of the iron supply would be at least as disastrous as the depletion of the resources of wood. People have been able to live without iron (the American Indians) but it is not known that any people ever lived very long without wood. At any rate, to use up all the wood or all the iron would produce a crisis in human affairs.

However, Prof. James Furman Kemp, of Columbia University, says there is nothing to be alarmed at, so far as the iron situation is concerned. The last annual report of the Smithsonian Institute, Washington, D. C., prints Prof. Kemp's statistics and sums up his conclusions, thereby showing that there is enough good iron ore in sight in this country to last the people of the United States 750 years, even with a considerable increase over the present rate of consumption; while if low-grade iron ores are counted, there will be enough to hold out as long as a human being remains on earth to mine it.

Some hickory handle men contend that it is better from a commercial standpoint to burn up low-grade handles than to sell them at a low price, for it prevents the sale of just that many high-grade handles at a good price. This is a queer way to figure, and it looks as though there is room for some argument on the subject, for timber, and especially hickory, is too scarce for any useful part of it to go to the slab fire.

Our export lumber trade is not yet what it ought to be, but it is improving some. Meantime there is the biggest lot of food stuff going abroad on record, which with other army supplies, is bringing better times to the money situation.

Hardwood Record Interviews Vehicle Makers

Important Points Brought Out in Conversation with the Vehicle Committee and Col. W. S. Wood of the United States Quartermaster's Department

In the interest of progress in the work of producing the various types of war vehicles for the government and in an attempt to eliminate misunderstandings which tend to retard such progress, **HARDWOOD RECORD** sought and recently obtained an interview with the wagon and vehicle purchasing committee through its chairman, A. B. Thielens of South Bend.

The interview took place at the Hotel La Salle, Chicago, on Friday, March 1. Those present were members of the wagon and vehicle purchasing committee, Col. W. S. Wood, in charge of vehicle production for the United States Quartermaster's Department and E. H. Defebaugh, president of **HARDWOOD RECORD**.

The following is a verbatim report of the conversation:

Mr. Defebaugh inquired as to whether the government had made a contract with the wagon industry to furnish so many wagons at three different prices.

Col. Wood: No, we made no contract with the wagon industry. We made contracts only with the individual. Each man had a different price on competitive bids. This was for the first contracts of about 10,000 in April, 1917. After the first wagon contracts were given out, which, as I say, were entirely on competitive buying and at different prices to different people, when the requirements of the government began to increase so lively, it was realized by the War Department that in order to get them out properly, and that the government should get its requirements filled, the entire wagon industry must be lined up, as we did in the leather industry, in the harness industry, and as we have done since then in wheels, etc. In other words, my idea is that in order to get the best results to win this war successfully and quickly, the way to do is to make all the industries as a body get right behind the government and push. As far as I know, under my direction the Jeffersonville depot is the first branch of the government, or first place, where an attempt was made to organize the industry. Last April I got a letter from General Baker in the office of the Quartermaster General, suggesting that it would be wise to call an assembly of wagon makers at Jeffersonville in order to talk over these things with them. They came, some fifteen of them, and from them I got such a clear idea of the entire wagon situation that I made a full report on it to the Quartermaster General, and recommended that they should have these gentlemen come on to Washington and talk with them there. These gentlemen went there, and I went there, and at that time there was formed what has since been known as the Wagon & Vehicle Committee, which is an Advisory Committee only to the depot quartermaster at Jeffersonville. They have no executive authority whatsoever themselves, and anything that they do is by the authority and under the responsibility of the depot quartermaster at Jeffersonville alone as representative of the Quartermaster General in the War Department.

The committee was composed of Mr. Board, Mr. Thielens, Mr. Lea and Mr. Parsonage. That committee was also recognized as a committee by the Wagon & Vehicle Association. This committee was recognized by a letter from the Quartermaster General in Washington, and also by a letter from me as depot quartermaster. It became an official committee. Later on, last December, I think, when Congress adjourned, they passed a bill that all these committees, "dollar committees," as they called them, should be abolished. This committee was also abolished, but Mr. Brookins of the War Industry Board wrote a letter to Mr. Parsonage who, during that time, had become an advisory member of the War Industry Board on wood products, in which he asked him to form an advisory committee for himself of this same board. This committee does not supply anything. This committee is simply advisory to the depot quartermaster.

Mr. Parsonage did form this committee. I retained it as my depot committee at Jeffersonville, and the Wagon and Vehicle Association retained it again as their committee.

Therefore, this committee is officially recognized, first, starting from the bottom up—by the Wagon & Vehicle Association; second, it is the Advisory Committee on matters pertaining to the purchase of wagons, of the depot quartermaster; third, it is recognized officially by the Quartermaster General's office in Washington. And, fourth, it is a recognized official committee by the War Industries Board. The personnel of this committee has changed somewhat; for instance, Mr. Lea has received notification of his commission as a major, and reported for duty at Jeffersonville to take charge of the wagon situation at that depot; and, other changes.

Mr. Defebaugh: This committee then is not recognized as buyers of lumber for the wagons that they contract for?

Col. Wood: They do not contract for the wagons. The quartermaster at Jeffersonville contracts with the individual wagon makers.

Mr. Defebaugh: The intimation in the correspondence with reference to contracts was that this committee, as representing the government,

perhaps not as plainly as that, intimated that they were government contractors, and that they had a right to make the price. They did not say that they had the right to make a price, but they had influence enough with the men who bought lumber for these same wagons, to get them to cancel contracts.

Col. Wood: That is all balled up.

Mr. Defebaugh: The wheel company at Memphis.

Col. Wood: As the authorized representative of the quartermaster general's office I have the duty imposed on me to buy these wagons. I call on the committee to recommend to me what quantities, in their opinion, what quantities of wagons the different manufacturers can make. It is their business to find out—what is the organization; what stock the different wagon makers have; what machinery they have, etc., so that they can say to me such and such a firm can make, say 2,000 wagons. I call on my committee to produce for me costs, etc., which will indicate to me what is a fair price to pay the manufacturers for making the wagons. These costs are based on labor, the cost of hardwood, and materials of all kinds. I consider these costs, and if they look all right to me, I send them on to the Quartermaster General's office with a recommendation of acceptance or rejection. The Quartermaster General's office passes them on to the War Industries Board, where the price is either approved, or they cut it down. Then I tell these wagon people that they must make so many wagons at such and such a price, to be done at such a time, and then I advise them, that in order that they can make a fair profit, I am going to try to hold the prices of different hardwoods at a certain maximum, and I say to them, now, in buying your lumber you must not go above the maximum because if you do you will begin to rocket the prices, and you will make the cost of wagons go up so that they cannot be produced for the government at the fixed price, therefore, you must keep under these prices that I am trying to hold, and if you cannot get wood stock at these prices, tell me, I will tell the committee, and we will try to tell you where you can go and make arrangements to get it.

Mr. Defebaugh: Who was consulted in making this basis of costs?

Col. Wood: The committee procured these from various manufacturers—from eight to twelve manufacturers.

Mr. Defebaugh: I am not talking about the wagons. I am talking about the lumber going into the wagons.

Col. Wood: Well, I should say that probably the different purchasers for the manufacturers.

Mr. Thielens: Yes—and the market.

Col. Wood: That these prices are right is clearly shown from the fact that we have been able—or the manufacturers of the wagons have been able up to this time to get all the lumber that they wanted at these prices, and we anticipate that they will, right straight along, and if the price of lumber is raised it will simply result in the government paying more money than necessary for these wagons, and I do not propose to allow it.

Mr. Defebaugh: There is more money involved in that material, in the lumber, than any other material that goes into a wagon.

Col. Wood: Yes.

Mr. Defebaugh: We have several national associations, just about the same as the wagon manufacturers. Why should not we be consulted in the cost of our goods, which, as you know, has advanced as much as twenty or thirty per cent?

Col. Wood: Why are we able to get lumber at our prices? Are we made a present of this lumber? Are these people so patriotic that they are turning out this lumber at a loss? I do not think a man is entitled to make a profiteering profit, and if I find a man in any connection with this that I know is making a profiteering profit, if I can put that man in jail I will do it.

Now, I will go back again further. When we started this thing it was a small proposition of ten thousand wagons, which at that time was looked upon as a big proposition. In the past ten months the thing has come up so that from the ten thousand wagons it represented in April, there is now practically 240,000 wagons, and here within the past month I have told my committee, and I have written to my executive officer at Jeffersonville that I believe the time had come when hereafter we should attempt the same plans that I understand are being worked by the cantonment branch and by the shipbuilding branch. That is, to send for the representatives of the different hardwood associations and put the burden on them. The committee should not have to bear these burdens. Say to the associations that you have got to produce, and put the responsibility right onto the associations, instead of making the committee bear the responsibility.

Mr. Defebaugh: The argument has been whether or not this committee can cancel a contract after making it.

Col. Wood: The committee makes absolutely no contracts whatsoever. All contracts are made by the depot quartermaster at Jeffersonville. If you refer to the placing orders for hardwood material, the committee cannot cancel any orders that are placed by manufacturers. Nor do I. That is entirely a personal matter between the manufacturer and the man from

whom he buys his hardwood. We set a price, say for spokes at thirteen and one-half cents. If a wagon manufacturer can buy spokes elsewhere for that price, or below, that is all right; it is his business. If he cannot do that he comes to the committee and informs them and they will tell him where he can go to get them at or below that price. It is then his business to make his purchase of spokes upon his own responsibility. The committee has nothing to do with it.

Mr. Thielen: I would say, gentlemen, that this is the third interview on this subject today.

Mr. Defebaugh: Am I asking anything unfair?

Mr. Thielen: No, you are not.

Col. Wood: I said to Mr. Thielen last night when he told me that you had asked to get the straight of this matter—I said, By all means let us see Mr. Defebaugh. We want the thing placed just as it is, the truth about it, and not these rumors or statements that are going around.

Mr. Defebaugh: In correspondence with Mr. Thielen's committee, it was stated that if the prices that had been sold at, or had been quoted, were not satisfactory, they would be satisfied to put it up to the trade commission.

Mr. Thielen: I made the statement myself, and it is a part of our record that if the prices recommended by this committee, which are the prices fixed by Col. Wood as the maximum were not acceptable to the producers, that the only recourse was to go before the Federal Trade Commission, and in that connection, with the statement I read a letter from this committee to Mr. Downman in which the price recommended was \$80 for three-inch and \$85 for four-inch oak at Chicago delivery, and Mr. Downman, in his reply, stated that he approved of the general plan of the committee in its operations, and if the producers had been furnishing substantial quantities of oak at these recommended prices during 1917 he was opposed to any advance, and it would be necessary for them to exhibit their costs before the Federal Trade Commission.

Then, furthermore, the committee to make sure of the prices being properly quoted, wrote to every man on the committee, giving him a copy of my telegram to Mr. Downman and a copy of Mr. Downman's reply.

To show you that this committee desired your co-operation, in open meeting they asked that the Southern Hardwood emergency bureau indicate a man to become a member of this board, and they selected Mr. Lang, and this was solely for the purpose of proving to these people that we wanted to co-operate. I do not understand your co-operation. Mr. Lang sat in on our meetings, etc., two or three times, and he came to me as a gentleman and said, I cannot in right continue in this work and still be true to the other side.

Mr. Defebaugh: The reason I came here was I felt there was a misunderstanding. I am sure the lumber trade people felt this committee was just trying to buy this stuff cheap. I know these lumber fellows well enough to know that they are disorganized, and that their prices are not organized prices, and with the right kind of co-operation I think this thing can be worked out along the right kind of lines. At the same time, with the increased cost in the lumber business, I am sure Mr. Thielen's company will show at least as high a basis of prices in the last three months. Oak ought to be \$5 a thousand higher. Also compared with other woods, oak is considerably cheaper, with the exception of railroad timber and ties.

Another thing, Colonel, I know that these men only want a fair price for the stuff, but they do not want to sell it for less than it is worth. The cost ought to be based on what the lumber manufacturers' figures indicate, and not on what a buyer indicates or what a wholesaler indicates. The other day at a little meeting a man said, It is a funny thing, but it costs me \$7.50 to get my logs into the mill. Another fellow said, It costs me \$4. I will bet that the cost committee of the trade commission never had any \$7 logging costs in their figures. I know these things to be a fact, because another man sitting there turned to his figures which were nearly \$7, due to scarcity of labor, scarcity of cars, etc. You know that in your business costs are increased probably sixty per cent.

Mr. Thielen: I understand this gentleman's position. He is like we are. He is the goat. He is trying to please both sides. Now, then, this Kelsey case is not the first one, but it is the last one. This Kelsey case is a matter which Col. Wood has explained to you, is for adjustment between Kelsey and the other people. Col. Wood has stated to you that he did not say to Kelsey that he would have to cancel his contract.

Col. Wood: We are always willing to meet these people. I am protecting the government. That is my business. The Jeffersonville depot under my direction from a five million a year proposition has grown to be a 250 to 300 millions a year proposition. From 145 people working in the depot and 900 outside, it has come up to more than 4,000 inside and more than 22,000 outside. I have with me ninety-two commissioned officers. All branches of the Jeffersonville depot have greatly increased, and as I say the wagon business in its inception started with a mere ten thousand wagons, and now in ten months has come up to 240,000 wagons, and we must change certain of our methods as the increasing business indicates to be wise. We want to make use of the hardwood association, and I say we intend to bring them in soon, and we will place the responsibility of getting the material upon them. We will bring their responsibility before the country if they fall down. And the prices have got to be right when they come in.

In connection with the question of profits, Col. Wood said:

"The wagon people, on our figures, as approved by the Industries Board, should be making a little over eleven per cent, but I question if they are making ten per cent." He also said he believed that not over fifty per cent of the manufacturers in any industry know how to figure their costs.

Col. Wood: I have no authority to fix sales prices of lumber. I cannot fix any prices because I have no authority to fix prices, but we do this—say to the manufacturers, Do not buy materials beyond certain prices. To illustrate, it is like this: I go into a shoe store to buy a pair of shoes and I tell the salesman I want to buy a pair of shoes to cost not over \$4. He says to me, "The lowest price shoe we have is \$5." I say, I am very sorry. I will have to go elsewhere. I do not tell him that he must sell his shoes to me for \$4, but I simply indicate that that is the highest price I will pay. It is the same way in the wood stock for wagons.

Mr. Defebaugh: If you can get all this stuff you want at these prices, as a buyer you are foolish to do otherwise. If you want to be sure of your stuff, you can use me any way you want to to bring about the necessary co-operation.

Mr. Thielen: When we find out definitely how much footage we want, we will tell these people. But, I would like to impress upon this gentleman, that there has been every willingness on the part of this committee to meet these gentlemen and to co-operate.

Tell these fellows among themselves to get busy too and see what they can do in the way of producing dimension stock. I do not mean that we are looking for it now. The government has joined with the wagon men to put up additional kilns to handle other stock. Wood stock should be produced in dimension sizes at the source.

Dedicate Plants to National Service

Members of the open competition plan of the Hardwood Manufacturers' Association, at their meeting at Memphis on March 2, discussed market conditions, transportation, labor and stocks of hardwood lumber, together with other subjects of paramount interest at this time.

It was agreed that, because of the large demand from government and from private industry and because of the serious interruption to production incident to labor and transportation conditions, the price position of the market was quite strong. It was pointed out that transportation conditions are showing little improvement and that labor is getting much scarcer as to supply and also much higher as to price.

The members realize that government requirements in the way of lumber and timber for ship building, for airplane manufacture, for the making of wagons and other vehicles, for wooden containers, and for other purposes directly connected with the war program, are going to be enormously heavy and it was the expressed sense of the meeting that those identified with the association in this territory are willing to devote their plants, their timber holdings and their other resources solely to supplying the government with its needs if necessary, to the exclusion of non-essentials of every character requiring lumber.

It was emphasized in this connection that lumber interests everywhere must come to exactly the same conclusion and that the sooner they do the better it will be for them and for all concerned. It was made quite clear in this connection that the transportation is resolving itself more and more into the question of what use is to be made of the products for which transportation facilities are wanted.

Resolutions were adopted commending the trade acceptance as a means of facilitating business, but it was pointed out in the general discussion that use of this instrument is necessarily limited because it is so little understood and so little used by the hardwood trade at large.

While here F. R. Gadd, assistant to President Robinson of the Hardwood Manufacturers' Association, said that it had been decided to hold a monthly meeting of the open competition plan of the association at Alexandria, La., for the convenience of those members of the association identified therewith in Louisiana and Texas. He had just returned from Alexandria, where the first meeting was held in conjunction with the Southwestern Hardwood Manufacturers' Club. The next meeting will be held March 27.

Mr. Gadd also announced that the monthly meetings for the eastern territory would be held in future at Huntington, W. Va., instead of at Cincinnati, the change being made because of the serious curtailment of passenger service on the Chesapeake & Ohio. The next meeting at Huntington will be held March 19. The monthly meetings at Memphis will be continued as usual.

It's Time to Know Your Costs!

Manufacturers' Association Seeks with Open Letter to
Bring the Necessity Home

A movement has been put on foot through the office of Frank R. Gadd, assistant to the president of the Hardwood Manufacturers' Association of the United States, to bring to the hardwood lumber manufacturing trade of the country an understanding and appreciation of how important it is in these days of changes and upheavals, of uncertainties and world conflict, to know the basic cost of its commodity so that prices may be intelligently aligned and regulated in conformity with value.

The open letter referred to in the sub-heading comes to Hardwood Record with a letter from Mr. Gadd in which he sounds the warning and to show his desire for national discussion of the question as a concrete issue of today and not as an abstract matter of theory for solution at some indefinite future date, he makes the following statement:

A copy of this letter is going to the American Hardwood Manufacturers' Association and to the other trade associations, as it will do little good for the members of this association to discuss the subject unless we can get all the manufacturers of the country talking about it.

The open letter is shown in the panel in the center of this page and is given prominence because it represents a concrete

TO ALL MEMBERS:

Lumber and building materials have been least affected by the influences which have caused the price of all other commodities to soar to unheard of heights during the last three years, according to a document which has just been issued by the Bureau of Labor Statistics of the United States Department of Labor.

The publication is termed "Wholesale Prices 1890-1916" and includes 285 pages of figures, facts and charts, which clearly trace the course of the wholesale price of practically every article sold in America. The compilation goes further and groups different commodities into classes, such as farm products, food, clothing, fuel and lighting, metals, etc., and then compares the trend of prices in certain groups.

Thus one chart traces the prices of three big classifications: fuel and lighting, metal and metal products, lumber and building materials from January, 1913, to January, 1917. The effect of the war on prices is clearly seen in this chart, but lumber and building materials suffered the least. In fact, the advance in the price of lumber during this period is almost negligible. This chart shows that lumber, starting from a point indicated as 99 in January, 1913, dropped to 91 in August, 1915, and rose to 105 at the beginning of 1917.

The cheapness of lumber and building materials is even more vividly illustrated in another tabulation listing the advance in all commodities during the year 1916. Lumber is the lowest in this list with an increase of only 8% over the previous year. The average increase for all commodities was 23%. It is unfortunate that this report did not show the average prices obtained during the year 1917, as we are confident that these figures, when issued, will also show that lumber and building materials have not advanced in price in comparison with all other commodities.

From the information obtained from this report, however, it would seem that a discussion of the question of costs at our next meeting would result profitably to our members, as some of them do not seem to realize that the increases in price they have received for their lumber is more than offset by their increased cost of operating, the increased cost of operating now as compared with pre-war periods being more than the increase in the selling prices. A comparison of your sales will show just what the Government report states, that prices on lumber dropped after the beginning of the war, remained practically on a level during 1915 and 1916, the increase not beginning until the early part of 1917. The price of all other commodities and of all material entering into the manufacture of lumber increased rapidly from 1914 on. If we would make comparisons of 1915 and 1916 sales with pre-war periods decreases instead of increases would be shown. Many manufacturers who do not keep accurate costs have doubtless felt that because of the increased prices they were making satisfactory profits, when in reality they were simply using up their stumpage and operating at a loss.

We have before us the figures of one of the largest of manufacturers which show that for the year 1916 their operating cost, including stumpage, labor, supplies, depreciation, fixed charges, etc., were approximately \$24.00 per thousand feet, while for the year 1917 these same charges were increased to approximately \$36.00 per thousand feet or exactly 50%, the net increase aggregating \$12.00 per thousand feet. In 1916 their average selling price was near \$28.00 per thousand feet, approximately what it had been for the past two years, while for the year 1917 it was \$38.00 per thousand feet, indicating an advance of 35%, or \$10.00 per thousand feet, on an average. Thus it will be seen that this firm's business showed a net loss of \$2.00 per thousand feet as compared with the year 1916.

That operating costs will show a marked increase in the current year over 1917 is not doubted. Everyone well knows that the price advance of 35% obtained by the manufacturer, above referred to, does not compare with the price advance of other commodities. For instance, steel has advanced from 300% to 500% and under Government regulations shows an approximate advance of 200%. The price of coal advanced as much as 500% and under Government regulations was allowed to stand at something like 150%. The price of grain, that is, hay, corn and oats, has advanced from 50% to 100% and oats, the food mostly used, showing 100% increase.

In order to continue in the lumber business saw mill owners will have to meet the advances of labor and the increased prices of commodities they are using in connection with their business that are sure to come, and at the same time they should receive what they are entitled to, namely, enough increase in the price of their product to offset increased heavy production cost. If the costs of other lumber manufacturers were like the one quoted above, it is clearly evident that if they maintain the same profits that they made prior to the war, their selling price must be increased \$10.00 to \$15.00 per thousand feet. Of course, if a lumber manufacturer's cost has not increased in proportion to the ones named, then the necessary increased selling price for them would be lessened in proportion as their cost is less than the one quoted. The figures, however, we believe are largely representative and they should cause every lumber manufacturer to be determined to examine more carefully into his costs to see to what extent the above increase in selling price should apply to his business.

Look into your costs and be prepared to discuss same at our next meeting.

Very truly yours,

FRG/S.

F. R. GADD, Assistant to President.

probably never have arisen had the lumber manufacturers been united and consistent from the beginning on their costs and selling prices. There is not the slightest doubt that in the investigation which is bound to come the prices offered will be shown as unreasonably low and unfair to the lumbermen but just the same had the lumbermen been prepared with a clean-cut analysis in the beginning there would never have been an argument.

It won't do to arbitrarily advance selling price without regard to cost nor will it be safe to sell at low figures with the hope that they may show a profit. If you think your cost is low look up the figures cited in the circular letter.

But the only way to find costs is to dig in NOW and get them and forget all the high-sounding and general stuff that has filled convention programs in the past. Conventions can NEVER solve this thing—it must be done by committees—the best that can be chosen and Hardwood Record herewith furthers Mr. Gadd's letter with the suggestion that the various hardwood associations appoint respective committees to meet all together and to stay together until something promising immediate and unmistakable results is

attempt to get definite action on the most important subject now before the lumber trade. To illustrate the direct bearing which accurate cost knowledge has on the trade, the present controversy and rather unsavory dispute over selling prices for thick oak would

evolved. Uncle Sam is fast becoming the biggest buyer of hardwoods and he is going to clearly state that he wants to know the why of prices. If he isn't shown he is going to use his own judgment and he is too busy an individual to waste time on guesses.

The "Devil's-Claw Carpenter"

In that strip of semi desert, stretching from the lower valley of the Rio Grande in Texas and Mexico, across New Mexico and Arizona, there is a tree which is a fit subject for a psychological as well as a botanical study. It illustrates the viewpoints of different observers who have undertaken to give it appropriate names. Strange it is that a tree so beautiful as to be called paradise flower by one observer should be thought so hideous by another as to be named devil's-claw. It is the same tree, but is seen under different conditions. Still other travelers consider ram's horn the most appropriate name for it; and yet others who are not quite so heartless as to couple this tree with the diabolical talons of Satan, modify the idea slightly and call it cat's-claw.

The botanist calls the species Gregg's acacia (*Acacia greggii*). Except during a period of about one week in early spring when the tree is in bloom, it is a doleful specimen of uncouth vegetation. Most of its associates are little better. Many of them carry such thin foliage in summer that they cast little shade. Devil's-claw's leaves are double compound, but so small that a group of forty-eight leaflets have been actually hidden under a silver dollar, though they are not usually that small. In midsummer many of the devil's-claw trees that occupy the bluffs overlooking the Rio Grande seem to be dead. Unless examined close at hand no foliage is visible, so thin is it, and so covered with the whitish dust that settles over everything. A little later the leaves fall, but so little changed are the trees in appearance that the shedding of the leaves may pass unnoticed. The branches look the same afterwards as before.

One feature stands out in horrid prominence. The thorns can be both seen and felt. They are curved like the claws of eagles, but are not so large. They grow along the sides of the small branches, with their murderous points curved back toward the tree's main stem, and what they catch they hold with a tenacity that justifies the name devil's-claw.

A RARE WOOD

The wood of devil's-claw will never reach a very extensive market. All that grows between the mouth of the Rio Grande and the mouth of the Gila—2,000 miles across the half-desert country—would probably amount to less lumber than may be cut on ten acres of redwood or Douglas fir timberland. No factory in the United States, as far as reports show, has ever used one foot of this wood; yet it is exquisite in its beauty. It is dark rich red, but changes into other tones and tints in the same trunk, blending through intermediate cloudy effects into gray and green. No other wood of America shows so great a variety of colors; but, unfortunately, few others show so many defects and unsightly scars where pits and cavities have been overgrown and included in the trunk. Sometimes these pits fill with wood that seems to grow there by some abnormal process, and this included growth may be a worthless splotch, or it may display colors suggesting onyx. Defects largely predominate, so that the process of cutting the really valuable wood out of a trunk is slow and costly, and the stock thus secured is usually in small billets.

Trunks of suitable size are used for fence posts, fuel, and railroad ties; but sometimes novelties and small articles of furniture are made by natives who have the skill and inclination to do the work. The wood is so hard that no man can drive a nail in it, and few carpenter tools will cut it. It saws more like ivory than wood.

THE DEVIL'S-CLAW CARPENTER

There was, a few years ago and still may be, a man in the Rio Grande valley who had made a specialty of working with devil's-claw, and had gained considerable local notoriety on that account. He was called "the devil's-claw carpenter," and he considered the term a compliment. When the writer of this was in that region on one occasion, and heard so much of this man's wonderful work with this wood, it was thought worth while to procure more information at first hand. The man was finally located in a small town on the bank of the Rio Grande, in Cameron county, Texas—a typical devil's-

claw region. He was not hard to find, since there were only a dozen or so saloons in the place, and it was said that he was sure to be in one of them. True to prediction, he was found in a back room, with a dozen Mexicans at a card table. That, by the way, was only the third day after the outbreak of the insurrection against Madero, and the town being on the border, hundreds of Mexicans had swarmed across the Rio Grande into Texas, with the idea of safety first.

The devil's-claw carpenter was more than willing to show his shop and its contents, as soon as he understood what was wanted. It was a dark night, but he led the way unerringly through lampless side streets and alleys, and up a dark stair which he rendered negotiable by repeatedly striking matches. The place had a clammy suggestion of "The Murders of Rue Morgue." His shop was likewise his living room, as was apparent from the unwashed mush bowl and spoon on the table, and a cot in the corner. A kerosene lamp with a cracked chimney, black with smoke, furnished the illumination.

The work bench was one end of the dining table, and all the visible tools could have been carried in one hand; and on this table were piled the articles made of devil's-claw, which the carpenter had whittled, sawed, and filed into shape, and on which his local fame rested. He used other Rio Grande woods also, but he specialized on devil's-claw which he cut on the Rio Grande bluffs.

The light was poor, but it sufficed to show gems of workmanship in which bits of wood of various colors were joined so perfectly that it was scarcely possible to say whether it all was one piece, or composed of many. It was difficult to determine which was most to be admired, the natural beauty of the wood, or the skill of the eccentric genius that worked the pieces into shape. He gave the devil's-claw wood all the credit, but all of the credit did not belong with the wood.

He was anxious to sell something, and said that he had not sold a single article in all the years that he had been making them, but had once loaned some to an exposition which made use of them to advertise the resources of Texas. When he named some of his prices, it became apparent why sales had not been up to his expectations. The smallest and cheapest article he had was held at twelve dollars, and it could not be bought for a cent less. He had tea trays, paper weights, jewel boxes, miniature tables, checker boards, and many conceits not made for any particular purpose and bearing no special name. He was obsessed with the idea that he was famous and that connoisseurs, perhaps crowned heads, would finally come to his terms and possess his devil's-claw novelties and curiosities. His prices may not have been excessive, if the time required in collecting the material and making them were counted at living wages.

German Business Men Notified

The Chamber of Commerce of the United States some weeks ago called for a referendum vote from members in all parts of the United States upon the proposition to boycott Germany's business men after the war, unless the Germans themselves take effective steps to rid themselves of the military caste that has plunged the world in war and is still seeking to overthrow neighboring democracies. It was to be a warning to the Germans that they could not maintain a dangerous war machine and at the same time expect trade with America.

The referendum vote has now been taken and it is overwhelming in its sentiment in favor of cutting Germany off from our trade after the war unless the Germans themselves overthrow their war-made rulers and put in their place a government in which the people have a voice. The Chamber of Commerce's vote was 1,204 in favor of the proposed trade restriction and 154 against it. This should serve as notice to Germany that if she expects to do business with this country she must not only repent but must bring forth fruit worthy of repentance.

The National Chamber of Commerce has 500,000 members scattered over the whole United States and they represent the country's business. The vote was given by the representatives of the whole membership.

Occurrences at Washington Interesting to Lumbermen

Personal Mention and the Activities of Various Boards and Committees

The big hardwood development of the month in Washington was the closing and abolition of the Southern Hardwood Emergency Bureau and the War Service Bureau of the National Hardwood Lumber Association. This was done by mutual agreement upon the ground that there is not enough business here to warrant the expense involved in maintaining the bureaus. The action of the southern and national bureaus leaves the Northern Hardwood Emergency Bureau alone in the field here, and it is said that it has not considered abolishing itself. The two former hardwood bureaus accomplished considerable here by getting in touch with the government and allied needs, keeping the trade informed, letting government authorities know what the lumber industry can do, and garnering considerable business. The work will be continued from the home offices of the associations.

The National Hardwood Bureau, according to Chief Inspector Hoover of the national association, has placed orders for over 7,000,000 feet of lumber. It also took some orders for cypress lumber and for hemlock.

The northern hardwood bureau reports the shipment of considerable birch lumber for propeller stock. It is understood that the use of northern hardwoods for making vehicles for the army will be permitted by the government. It is believed that northern oak will be easier to get in some instances than southern hardwoods.

The navy department is understood to be buying about 1,000,000 feet of lumber per day. A good deal of it is being bought without competitive bids, and the delay incident thereto, because Lumber Purchase Adviser Morford of the navy department bureau of supplies and accounts knows that the Director of Lumber, Council of National Defense, has already fixed the price of lumber of many kinds, sizes and grades for many purposes. He does not go behind the government price as a rule, but seeks bids if there is no fixed price.

Mr. Morford says that the navy has been reckless in the use of ash lumber for purposes for which substitutes can be used. He mentioned ship's ladders and furniture for the naval training stations and barracks. He says that oak and cabinet woods are now being substituted.

The ash shortage, said to be due to the big demand for this wood for airplane construction, has not yet hit the navy, it is stated, but it has taken steps along conservation lines in the interest of other branches of the government service. Navy lifeboat oars are still being made of ash by the New York Boat Oar Co. and a Memphis company that has a subcontract from the New York concern, and also does business with the allied governments.

Just now the navy is out after about 100,000 feet of oak lumber for shipment to the Orient.

The Northern Hardwood Bureau has received orders recently for a quantity of hemlock lumber for more building construction undertaken by the war department at the cantonments at Rockford, Ill., and Battle Creek, Mich.

Under H. K. L. Williams, who is in charge of hardwoods for the signal corps of the army, is J. C. Wickliffe, secretary of C. C. Mengel & Brother, who has been placed in particular charge of mahogany. Over both of these gentlemen is Henry Lockhart, Jr., as chief of the Foreign and United States Materials Division of the Signal Corps.

Mr. Williams is reported to want basswood and poplar for airplanes. Poplar is used in training machines, basswood in the wings.

An estimate of \$400,000,000 appropriation to make up a deficit in the aviation program has been submitted to congress very recently.

During the debate recently in the house Representative Towner of Iowa stated that investigations of the United States Bureau of Standards demonstrated that mahogany was not the only wood suitable for airplane propellers, but that there are plenty of native woods in this country available and suitable for this purpose.

Veneer paneling in eighth of an inch thick with a hardwood core and softwood exterior is needed in great quantities for airplane production, it is learned. The National War Emergency Bureau of the Veneer and Panel Industry is understood to have information that this material is needed not only for the fuselage of the machines, but also for the covering of the wings. Recent government specifications permit this latter use of veneer in substitution for linen cloth, which is very scarce.

It is reported that there have been amicable agreements reached between representatives of the United States government and of its allies practically dividing the mahogany and walnut lumber supplies of this country to meet the war needs of the grand alliance as far as possible.

A call for skilled woodworkers and other mechanics has again been sounded. Secretary of War Baker, the Committee on Public Information, and the Signal Corps of the army have united in the call for such men by the thousand to perform very necessary work in the aviation corps of the American Expeditionary Forces and the army at home.

Woodworkers are also needed, it is understood, in the big ordnance repair and manufacturing shops being constructed at a cost of \$25,000,000 in France, for taking care as far as possible of the matter of vehicles and wheels for the American armies.

The war service committee of the furniture and fixture and allied woodworking industries is reported to be quite successful. Details of its work are not yet available, but it is understood to have received orders for airplanes, propellers, wagon and auto bodies and wheels, boxes, etc. The committee is getting organization in good shape here, tabulating information about the members of the bureau, distributing information, receiving and answering inquiries from various government departments, etc.

Large contracts have been placed by the government for wooden boxes for shipping millions of shells, grenades, rifles, cartridges, and many other instruments of warfare, some of which may prove a surprise to the Germans.

Government box contracts have been awarded to sash and door factories and furniture factories as well as to straight box factories, although the bulk of this business naturally goes to the old line box people. It is reported that some of the prices at which certain concerns took government box contracts were much too low, owing to the highly technical character of the specifications of many of the boxes required for ordnance supplies.

The price of wooden boxes for 14,000,000 cans of foodstuffs is understood to have been fixed by the food administration purchase bureau, which is buying food for the allies and for the American army and navy.

W. S. Goodwillie, a Chicago box manufacturer, has been commissioned a captain and placed in charge of the section of packing boxes and containers, of the ordnance department.

The Southern Pine Emergency Bureau has received orders for 18,000,000 feet of lumber for Charleston, W. Va., powder factory and Hog Island ship yard, and various camps, Washington constructions, etc., also 52,000,000 feet the preceding week for the Nashville, Tenn., powder factory, with a quantity of special sawed stuff for the British government, and orders to replace lumber Gen. Pershing got from England, and other good business in sight.

(Continued on page 33)

Figured Gum Passes Final Test

THE O. K. Houck Piano Company has met with great success in the FIGURED GUM piano it has had on exhibition for some time.

Several other houses are now making sample cases in FIGURED RED GUM. The Edison phonographs are now shown in this wood. Its use in many other internationally known products has brought public recognition.

The trade would buy YOUR product in FIGURED RED GUM.

We are able to help greatly in your choice of material for sample lines as we are the largest producers; as we keep on hand a stock of logs for filling exceptional orders; as our warehouse contains one million feet of FIGURED RED GUM, sawed and sliced, in all thicknesses.

Our standing as the leading producer bears testimony to the correctness of our methods and equipment, and of the quality of our timber

Standards as a Hobby

Production of Uniform Sizes as Well as Thicknesses Would Result in More Economical Production

THE IDEA OF established standards and the plea for standardization is not new by any means. Both have been before us for many years and standardization has been a factor of importance in the industrial life of the country for a generation or more. The idea of standards as a hobby, however, has become more widespread with the new year, and with the government setting an example and insisting upon standardization in airplane work and in motor work and other work for the army and government needs new force is given it.

With the example of the government before us leaders of industry on all sides are now mounting the standard hobby at such a rate that unquestionably standardization will be a subject of importance in every line of industry throughout the year and as a final outcome there will perhaps be more progress made in establishing recognized standards during the year than has been made in a period of several years heretofore.

In the veneer and panel industry we have been discussing this matter of standards something more than ten years. The writer finds by reference to earlier notes and previous writings that a discussion between Mr. Underwood and Mr. Doster, back in the summer of 1906 was a means of starting an argument on this very subject.

There had been a convention session of veneer and panel men in the course of which Mr. Doster, on behalf of the Hardwood Manufacturers' Association told of what they were doing in the lumber industry, how the organization was keeping a list of stock and keeping the industry informed about how much was on hand of this and that kind of stock so that with this information before it the trade might be so guided in its work as to let up on the manufacture of stocks that were accumulating too heavily and concentrate on those sizes which seemed to be most needed.

After it was all over Mr. Underwood remarked to Mr. Doster that he liked the talk very well and that the logic of it would apply as well to the veneer industry as to the lumber business, except on the point of stock on hand. He said that in the veneer business they didn't have stock on hand, but cut the veneer and made the panels on orders. Moreover, he argued that they couldn't do it any other way, so there was no chance in the veneer industry to use the idea of stock statistics.

The writer took issue with Mr. Underwood at that time and insisted that if the veneer and panel men were not cutting stock ahead of orders it was time they took up standardization and developed the practice of establishing standards and carrying stock ahead of needs. The sash and door industry was cited as an example of stand-

ardization, also the sawmill industry as a whole. It was pointed out that one of the serious problems in the manufacture of rotary cut veneer was then, as is now, the question of how to make a clean up disposal of the stock. The argument was advanced then, just as it can be now, that to establish the practice of cutting certain sizes in standard stock and carrying it against future needs will do a lot toward helping solve this question.

For example, a buyer has an order for certain widths in veneer. It goes without saying that the manufacturer will produce some stock in cutting that will not fit the width. While he might get along very well if it was narrow stock, it will more likely be 12 inches or wider. Suppose it is an order for 18-inch stock, what are you going to do with the stuff that won't make 18 inches? Let us go over to the sawmill and see what they do there. It's very simple, isn't it? They get what 18-inch boards they can out of a log and the rest goes into standard stock, of one kind and another, is piled on the yard, and, in the course of time, is sold. Can't we do something of the same kind in the veneer factory? If not, why not?

The sawmill has one advantage over the veneer factory in that it can cut part of a log one thickness and part another, at will, and thus better control the diversifying of their product. But what would this avail them if they had to cut to order exclusively and could not cut standard stock against possible future needs with some assurance that it would find sale?

The key to the whole situation is in having a sufficiently varied and constantly required list of special orders to help make an economical clean-up of timber. If you are fortunate, there are times when you can get this effect by having on hand a long string of orders so varied in dimensions as to dovetail in with each other nicely to make a close clean-up. But to get things in this shape is not always possible. You can't logically expect to take an order and make the acceptance contingent on getting another to match it. You may make them subject to strikes and other things, presumably beyond your control, but veneer will have to be mighty scarce and hard to get before the average buyer will offer you an order to be cut only when you can get another order or two that will work nicely with it, so as to help clean up your timber closer. It wouldn't be good business, and, besides, what's the use—why not have some standard sizes to help you make this clean-up? It need not interfere with your work when you are lucky enough to have a list of orders that go well together, and it will help you out considerably when you haven't. In fact, this is the keynote to the solution of the economical manufacture of rotary-cut veneer. Then, why not?

One of the things which distinguishes our sawmill and lumber industry from that of the old world is its standards. In much of the old world country, the sawmill simply converts the logs into flitches, thick plank and timbers, and these in turn are worked up at the planing mills and factories in whatever dimensions are required. In this country we do differently. We coined the word *lumber*, and built up the lumber business around the inch unit as a standard, and early developed the habit of cutting the stock to standard thickness, width and length, and undoubtedly quite a measure of the great success and progress of the lumber industry of the United States is due to this early standardization. Anyway, out of it we have built up the greatest lumber and woodworking industry the world has ever known and at the present time we are doing the same thing with the veneer business.

Also we are gradually making progress at standardization in the veneer and panel business. We have been both unintentionally and unconsciously reducing veneers to standard thickness and it is only a step further to making standard widths and lengths. We are doing this in many lines now and many people are able to carry certain stocks of veneer ahead of needs. In panels it is not so easy nor has as much progress been made as in veneer, but some progress is being made even there. Meantime, many veneer people feature stock on hand and advertise it today.

One phase of the veneer business practically estab-

lishes its own standards and that is the fine face veneer—the figured stock and the flitch stock. This must be cut to suit the timber and the width and figure adapted after it is cut to the best combination for getting results. This is a special branch of the industry, however, one in which the figure and face appearance are the controlling factors. There is, of course, some room to exercise the standardization idea here, but the main field for riding the hobby of standards to bigger things and better results is in the plain rotary veneer industry, and in the making of plain panels and built-up lumber.

Just before the war turned the world upside down we had some interesting development started in connection with standardizing the veneer industry. At a meeting held at Indianapolis Robert E. Belt, of the Federal Trade Commission, made a talk to the members attending, in which the subject of standardization played an important part.

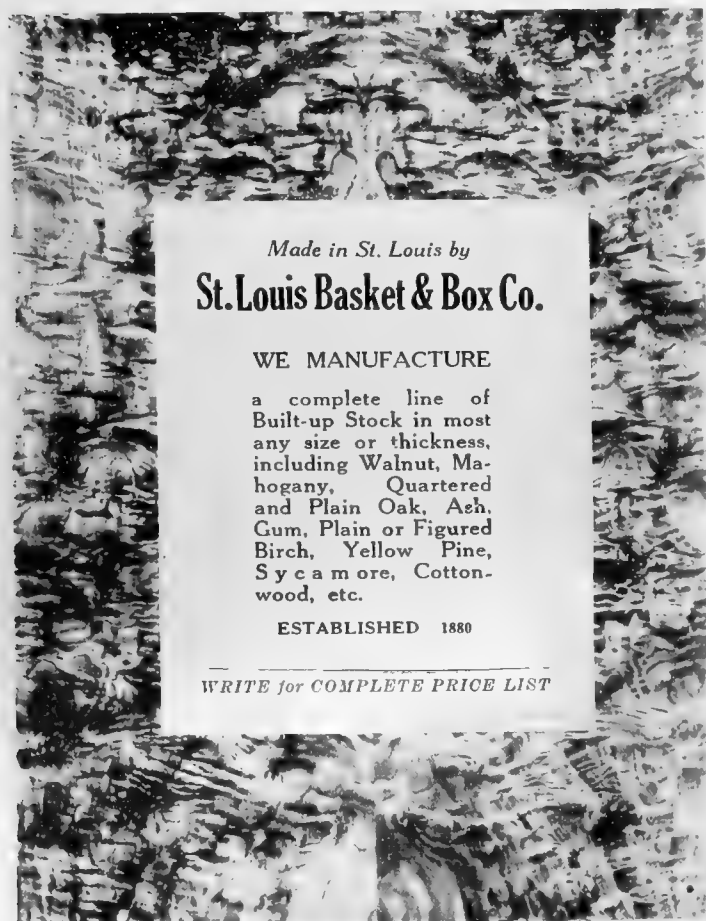

Mr. Belt had in mind not merely the standardization of sizes and testing methods, but also the standardizing of cost sheet methods and cost figuring generally.

At that time, too, a committee was named to go before the National Hardwood Lumber Association with the subject of veneer grading rules and specifications. The idea of that conference was to investigate the practicability of including the grading rules of veneer in with the standard rules for grading lumber. Still, in a way, it was a step toward standardization.

It is easily apparent, however, from observation and talks with those engaged in business, that we are gradually working toward more standards and more stock carrying in the veneer and panel business. Moreover, since the standard hobby is one that will be ridden extensively in practically every industry during the present year, it should prove a splendid way in which to push the idea of more standards and more following of standards in the veneer and panel industry. J. C. T.

Veneer has been successfully substituted for paper for certain purposes. When cut thin, the printer makes use of it for cards and stationery. It is not claimed that in price it is a competitor of paper, but as a novelty it is popular. The amount of rough handling it will stand surprises most people. It may be sharply bent without breaking or splitting, and ink shows well when the printing has been properly done. Wooden visiting or business cards are not unusual.

A radical change has taken place during the past fifty years in the popular definition of veneer. It was once commonly understood to mean something flimsy or counterfeit, something not as good as it looked. That view has changed, and it is now understood that there is nothing sham about veneer. It is not intended to be a covering for faults and defects, but rather as a finish that adds value to the article. It is known that an article covered with veneer may be better than one of solid wood. That understanding has been reached by a long process of education relating to the uses of wood.

American Veneers of Foreign Wood

The Output Is Small, but the Cost May Range Quite High

THE UNITED STATES is so well supplied with wood of its own that it has little reason to bring wood from foreign countries to work into veneers; yet nearly 25,000,000 feet, log scale, are imported annually for that purpose. This has nothing to do with veneers imported already cut or with panels made abroad and shipped to this country. The stock cut from imported logs is small in comparison with that produced from homegrown material, and is approximately six per cent of the whole. The following foreign woods are imported in the log and are cut into veneers in this country. The figures cover one year:

Wood Imported	Feet, Log Scale	Cost per 1,000 Feet, Log Scale
Mahogany	16,057,000	\$ 97.50
Spanish cedar.....	5,140,000	92.19
Maple	1,025,000	15.02
Circassian Walnut	809,000	318.33
Birch	500,000	15.00
Beech	500,000	12.00
White oak	463,000	100.00

Elm	25,000	12.00
Satinwood	15,000	200.00
Rosewood	15,000	140.00
Ebony	1,000	180.00

Of these woods, beech, birch and elm may be dismissed as of no special interest, because they came from Canada and are of the same kind as grow on our side of the international boundary. They were imported for no reason except that they were convenient, and could be had as cheaply as similar wood on this side of the line.

Foreign Oak

Information regarding the imported oak is incomplete and its origin is not stated. It was all converted into veneer in the state of New York. Its price indicates that it did not come from Canada, as it cost too much—more than twice as much as the oak grown in this country that went to veneer mills. While the high price seems to exclude Canada as its origin, the price is rather too low for European oak. Possibly it was Japanese oak which can be laid down in this country at the price quoted. Oak from Japan, and similar oak from Siberia, have found considerable demand in the United States.

Louisville - - - Kentucky

The Asiatic oak is soft and works well, but it lacks the characteristic figure of some of our native oak.

A previous article in this section of Hardwood Record dealt with mahogany as a veneer wood in this country, and its further discussion may be omitted here. This leaves Spanish cedar, Circassian walnut, satinwood, rosewood, and ebony as the foreign veneer woods that go to mills in this country.

Circassian Walnut

Less Circassian walnut is made into veneer today than at the time the above figures were compiled, which was a few years ago. Statistics of the veneer industry are not compiled very often. This walnut comes from the shores of the Black and Caspian seas, and this region has had little commerce with the outside world since the beginning of the war. About all the walnut that has been made into veneer since then has been cut from logs in storage at the beginning of hostilities. So far as America is concerned, it has few left, and the production of Circassian walnut veneer the present year may be expected to be very small.

This is the same tree that bears the "English" walnuts found in the stores; but the trees which bear the nuts have been planted in Europe and America. Large numbers of them are growing in California, and in course of time their trunks may be cut for veneer; but that time will not come soon, for the trees must be quite old before the wood becomes finely figured, and in some localities it never does. Most of the Circassian walnut logs from Russia and Turkey are cut in old walnut orchards which were planted from one hundred to three hundred years ago. They have ceased to be profitable as nut bearers, on account of age, and are sold as logs.

Satinwood

Satinwood is not an important source of veneer in this country, as only 15,000 feet of logs are demanded yearly. The logs are seldom more than twelve inches in diameter. The wood is yellow and very hard and heavy. It resembles boxwood of which wooden rollers of skates are made. The wood's value does not depend on figure, for it has none.

The supply comes from the East Indies and the West Indies, but the trees in the widely separated regions are not believed to be identical, though much alike. It is probable that the supply reaching the United States comes from the West Indies, chiefly Nassau and neighboring islands east of Florida. A similar tree grows in Florida, and is found principally in the Marquesas keys and Boca Chica keys. In Florida it is commonly called yellow wood. Its family (the rue family) has several representatives among the trees of this country. The wood is used both in the solid and veneer. As solid, its chief demand comes from makers of brush backs. As veneer it is made into small articles of furniture and into musical instruments. When the wood is fresh it has a disagreeable odor and a bitter taste, but these largely disappear

Call on our Representative, R. S. WOODBRIDGE, when in Grand Rapids, Mich., Vinkemulder Bldg.

when the stock becomes thoroughly seasoned, and no complaint on account of them is ever heard in relation to the finished articles.

Rosewood

A dozen or more distinct woods are known as rosewood, and some of them are not related to the others. They grow in many parts of the world. But the rosewood which finds its way to the veneer mills of the United States perhaps all comes from Brazil and is all of the same species, *Dalbergia nigra*, a tree belonging to the family to which locust, mesquite, and redbud belong. It reaches our market as small logs.

The wood is about as heavy as hickory, and in color

is blackish or purplish brown. It contains many pores, but they are usually tightly packed with resin so that they are not prominent in the polished wood, though they can generally be seen. The name is due to the wood's faint smell of roses, though the odor is largely lost after the wood has been seasoned. There is nothing in the color suggesting roses.

The largest use of the veneer is in the manufacture of pianos, but it enters into the construction of other musical instruments. Many small articles are made of solid rosewood.

Ebony

The use of ebony by veneer makers is so small that it is scarcely worth mentioning. It is more demanded in solid than in veneer. It comes from many parts of the world and is identified as many species, but all belonging to the same family as persimmon. It is valued chiefly for its rich color. Ebony is commonly thought of as black, and that is the color of most that goes to market; but ebony may be had in most colors common to other woods. The color is found in the heartwood and is due to pigments deposited there while the tree is growing. The sapwood is nearly as white as the sapwood of hickory; but little demand exists for the sap. Its principal use is in the manufacture of shuttles for weaving. Most of the ebony of commerce comes from East Africa or Ceylon, though a little is shipped from various countries. Most ebony veneer goes to piano factories.

Spanish Cedar

When cedar is mentioned, most people think of softwood, but Spanish cedar is a hardwood with broad leaves. It is misnamed, for it is not a cedar. It belongs to the same family as the China tree which, though originally introduced from Persia, has run wild in the Southern states. But Spanish cedar cannot stand our climate and is not found growing in the open in the United States. It is nearly related to mahogany and closely resembles it, but the wood is much softer.

Cigar boxes constitute the largest use of Spanish cedar veneer. It may be cut very thin. It has been reported cut to the thinness of one-thousandth of an inch, but that is too thin for any practical purpose.

Vermillion

A large number of woods from foreign countries are made into veneers in the United States, but no exact figures are obtainable. Principal among such is vermillion or padouk. This wood's color suggests its name. Car builders are its largest users in this country and it is among the handsomest and most expensive of foreign woods. The genuine article comes from the Anadam islands and adjacent shores, but there are other woods which resemble vermillion and carry its name, which are something else. The Philippine islands have woods which pass in the market as vermillion, though botanists insist that they are different from that produced in the Anadam islands. Users of the wood can distinguish no difference.

Wooden Caster Coming Back

It is not exactly proper to say that the wooden caster for beds and other heavy furniture is coming back, for it has never gone out. It did lose some ground, however, to the metal caster. Since metal has increased so greatly in cost, while wood has remained practically the same, the little wooden wheel is regaining whatever ground it lost. The caster is made of hardwood and the harder the better, but it must be a wood not easily split or crushed. One of the advantages of a wooden caster over one of metal is that it is less noisy when rolling over the floor. Birch, beech, maple, and lignum vitae are good caster woods. In non-splitting qualities black gum is excellent, but it is not hard enough to stand severe usage. Mesquite has properties that seem to place it among our best native woods for casters, but it is not much used. Turkish boxwood is usually regarded as the highest class caster wood, but it is expensive.

Russian Veneers Missed

Before the war Russia exported much veneer and veneer panels, largely to Great Britain, while a little came to America. This supply has now wholly ceased and there is no way of telling when it will again begin. Much of that Russian veneer was made of white birch and alder. Three years ago a Russian veneer manufacturer visited the United States in the interest of the trade and addressed a number of association and board of trade meetings in this country, where he gave interesting descriptions of the processes of manufacturing his product. One point that attracted the attention of veneer makers here was that in Russia it was customary to dry the sheets of veneer by passing them between hot rolls. In that way they were quickly made ready for gluing into panels. The absence of Russian veneer from its former markets will create a demand for something to take its place, and American veneer makers ought to be able to get some of the business.

Veneer for Coffee Drums

It is announced that a large veneer mill is to be built at Sacramento, Cal., and will specialize in rotary cottonwood and sycamore veneer for coffee drums and fruit baskets and crates. Cottonwood is considered one of the best woods for coffee and sugar drums. It is white in color, light in weight, and tough in texture. Sycamore is little inferior to it in all qualities except color. The veneer industry in California, so far as hardwoods are concerned, has never been large, and only three hardwoods of that region can be regarded as wholly suited to veneers for the barrel and basket business. These three are cottonwood, sycamore, and alder. The supply of these woods is not great in any one region, but the trees are scattered in many places along the water courses. The shipping drum business on the Pacific coast will be stimulated when the supply of home made veneer becomes available.

Veneer panels are no more durable than is the glue that holds the sheets together. For that reason the improvement of glue and the development of the veneer industry have gone on side by side. Glue must have holding power that is not seriously affected by weather changes; for the panel that falls apart in damp weather is a failure. It is probable that panel makers are the largest users of glue; at least it is certain that they are the most exacting users.

When the cores are utilized as they may be, there is little waste when wood is manufactured in veneer by the rotary or the slicing process. Even the loss due to sawdust is eliminated. Little veneer is now made by sawing, which formerly was the principal method of making it. The easy manufacture of very thin lumber by the band resaw has met a demand which was formerly filled, in part, by sawed veneer.

(Continued from page 10)

The Georgia-Florida Yellow Pine Emergency Bureau reports the receipt of orders recently for 1,000,000 feet of ties and 1,000,000 feet of timber for government work at Fort Navassah, N. C., and 1,000,000 for government construction in this city, also 3,200,000 feet for Hog Island and other projects.

The Alabama-Mississippi Emergency Bureau has received orders for 3,000,000 feet of lumber for camps and is in line for 12,000,000 or 15,000,000 feet each for the Nashville and Charleston powder plants.

The North Carolina Pine Bureau recently received orders for six to seven million feet of lumber for camps, for animal embarkation facilities at Newport News, for a government ammonia plant at Perryville, Md., and for other work.

The capacity of army hospitals is to be doubled and the aviation fields to be made larger, according to information obtained in official circles here, thus increasing the demand for lumber.

Representatives of the aircraft board, shipping board, navy department, cantonment division and signal corps of the war department, war industries board, and Pacific coast lumbermen have formed a conference to keep in close touch with the Pacific coast lumber production, and the situation as regards the needs for shipping and aircraft. Capt. A. E. Selfridge of the lumber director's office has been appointed Washington representative of the west coast lumber interests. Howard Coffin of the aircraft board is chairman of the conference. J. H. Bloedel, H. B. VanDuzer and Col. Disque are the Pacific coast members of the conference. Col. Disque has been here recently. Under the new scheme the West Coast lumber emergency bureau has been merged into the government service, with Lynde Palmer still in charge of its office here.

Messrs. Coffin, Selfridge and Palmer are members of the West Coast lumber conference, which also includes H. F. Howe and Capt. H. M. Darling of the aircraft board; James O. Heyworth of the shipping board wooden ship division, Major Durant and Capt. Dorsey of the cantonment division of the war department; M. Doubleday of the Navy Department. The conference disposes of questions arising in connection with the government orders here and the lumber production of the West.

A hearing before the federal trade commission on the cost of producing southern pine has been set for this city, March 12, when efforts will be made to settle the question whether prices on lumber orders of the government during the last three months shall be raised, and what the future price will be.

A freight embargo has been imposed on all shipments north of Potomac Yards, Va. Lumber can't be moved except with the special order of the government officer in charge of work for which it is needed.

It has been announced that the shipping board has sent James Bentley and Wood Beal to Jacksonville and New Orleans, respectively, to take charge of the work of locating and getting out big timbers from the southern pine forests which the board officials say they have not been able to get from the southern lumbermen, owing to the expense and delay involved in the production of these timbers. Bentley and Beal have sent timber cruisers to look over the southern forests and Bentley has reported that in Florida and Georgia they have discovered 400,000 trees suitable for making big ship timbers. Similar reports are expected on the forests of other southern states.

James Heyworth, in charge of wooden shipbuilding for the shipping board, says that Bentley has arranged to get a number of logging crews and teaming outfits to go into the woods and cut the timber that is being marked by government experts, and also to haul it to mills where it will be manufactured for the government, the timber and mill owners being compensated by Uncle Sam at reasonable prices. The government will commandeer the timber if necessary, it is stated. Heyworth says that there were still 10,000,000 feet of southern pine big ship timber due from the South

February 1, out of 101,000,000 feet originally ordered. Twenty-five million feet have been furnished from that section, and 65,000,000 feet have been ordered from the Pacific Coast for wooden ship building in the South and East.

Shipbuilding contracts for 24 wooden ships held by the Southern Shipbuilding Company, Charleston, S. C., and Hampton Shipbuilding Company, Norfolk, Va., have been cancelled by the shipping board because the companies have not begun work on the vessels yet. The government may take over the shipyards and build ships itself. It is stated that building of steel and wooden ships on the Pacific Coast is beating eastern and southern records.

Organized labor is getting active in efforts to direct the wooden shipbuilding program. John J. McGee of New York has submitted to the President a plan involving the government's taking over all the shipyards. If this is done he says labor can produce 750,000 tons of wooden shipping every sixty days, or 5,000,000 a year, after they get started. Many new yards would be built under the plan also.

Mr. McGee, who formerly headed the skilled labor bureau of the emergency fleet corporation, says that difficulty in obtaining big timber has caused delay in the wooden shipbuilding. He favors the abandonment of the Ferris type and the building of many 5,000-ton wooden ships of the Hough, Donnelly, Hawks and similar designs.

Mr. McGee is reported to have been offered an appointment by the Canadian Munitions Department to take charge of shipbuilding in Canada, and invited to take 5,000 carpenters and woodworkers besides other workmen with him. According to William L. Hutcheson, president of the Brotherhood of Carpenters, Mr. McGee has accepted the proposition.

Hutcheson declares that there are 50,000 carpenters idle who could be used in shipbuilding if the material, especially big timbers, were on hand. This statement was made at a conference between Hutcheson and representatives of the navy department and shipping board and metal trades union. It was added that wooden ships of other types than the Ferris type do not require timbers heavier than 8 by 12 and that such ships are being built on the Pacific Coast for the French government. One company is said to have a contract for 59 ships of this type.

Government housing preparations are proceeding rapidly. The President has approved the bill providing \$50,000,000 for the shipping board for housing shipyard workers, and \$8,000,000 has been allotted for housing operations at Hog Island shipyard. Other allotments of millions are to be made for shipbuilding towns along the Atlantic coast. Much of the housing will be frame construction in the form of portable houses, barracks, and permanent dwellings.

A general housing bill providing for housing workers in munition plants, etc., at a cost of another \$50,000,000 has been reported favorably by the house committee on public buildings and grounds, and will pass the house of representatives at the first opportunity.

To provide for housing government employees in the District of Columbia a bill has been introduced by Representative Mapes of Michigan making \$10,000,000 available. Extensive construction operations have been undertaken here and others are planned to accommodate government departments and offices and in them large quantities of lumber are needed.

Harold P. Plummer, Union Lumber Company of Los Angeles, Cal., and the Union Steamship Company, has joined the United States food administration as a volunteer in connection with the handling of marine transportation problems falling within the scope of the food administration's activities. He will aid in coordinating the work of the administration, the war trade board, and the shipping board.

Secretary of the Interior Lane has ordered the sale of 70,000,000 feet of timber located on lands in Oregon formerly included in the land grant to the Oregon & California Railroad Co., which was declared forfeited to the government a couple of years ago.

Modern Hardwood Operations

TOP TO BOTTOM—(1) LOG LOADER AT WORK. (2) LOG YARD IN THE WOODS. (3) LOGS ARRIVING AT MEMPHIS MILL.

The Gayoso Lumber Company of Memphis, Tenn., is one of the widely known and substantial lumber concerns of the South. It has been in business in that city twelve years and has kept pace with the development of that prosperous region and contributed to its success.

The company first opened a plant for business in Memphis in March, 1906, and at that time was capitalized at \$50,000. It purchased ample yard space in South Memphis along the main line of the Yazoo & Mississippi Valley railroad, thereby exhibiting excellent foresight in planning for the future and the business expansion which the future would bring to that growing region.

When the company located at Memphis it represented the busi-

THE BIG MEMPHIS MILL.

ness formerly conducted by the Ransoms at Nashville, Tenn. At the time of the move to Memphis the officers of the company were John B. Ransom, president; Arthur B. Ransom, vice-president; W. A. Ransom, secretary and general manager, and Charles R. Ransom, treasurer. Now, after a period of twelve years, W. A. Ransom is president, and C. R. Ransom secretary and treasurer.

When the business was carried on at Nashville years ago it was concerned with hardwoods, for which Tennessee has always been noted.

The establishment of the business in Memphis was well advised. That city is the natural center for the hardwood business of a large section of the South. Its facilities as a manufacturing and distributing point have been thoroughly established. Twelve years ago when the Gayoso Lumber Company located there, the importance of Memphis as a hardwood metropolis was not quite so well known as it is at present, but even at that time the city's place in the lumber industry was assured.

C. R. RANSOM, SECY.-TREAS.

Gayoso Lumber Co., Memphis

The Gayoso company has its own timber and all facilities for logging and manufacturing. It is now drawing its principal supply from its tract of 50,000,000 feet of splendid timber from the famous St. Francis basin in Arkansas. The cut consists of splendid gum, oak, ash, hickory, cottonwood, tupelo, cypress and willow. The company has now on sticks a stock of about 10,000,000 feet and when logs permit runs its Memphis mill night and day. It is prepared to load out twenty cars a day at Memphis and ten cars a day at Blaine. It takes more than 400 employees to keep the big business humming.

The Ransom boys are sticklers on efficiency not only in the manufacture but in the marketing of their product. They insist

PART OF THE MEMPHIS LOG PILE CONTAINING 1,000,000 FEET

upon proper yarding to the end that there shall be no unsightly nor confusing accumulation of dangerous refuse and that the piles be so carefully laid and built that the drying process results in the finest possible finished product. These methods have proven a paying investment in the sales.

Nobody in all the Southern hardwood trade is more popular than are the members of the Gayoso Lumber Company. They are public-spirited to the extreme and big hearted and genuinely hospitable. Their success is the deserved result of hard work and excellent judgment.

C. R. RANSOM, SECRETARY.

When the Gayoso company moved to Memphis it laid ample foundation for future growth by securing ground for manufacturing and yard purposes, and timber for raw material. Since that time the company has grown steadily.

At this time it is operating two band mills with a combined capacity of 110,000 feet a day. The larger mill is located at Memphis and its output per day is 60,000 feet of sawed lumber. The other mill is at Blaine, Miss., and cuts 50,000 feet a day.

TOP TO BOTTOM—(1) PART OF MEMPHIS YARD. (2) MAIN OFFICE AT MEMPHIS. (3) SORTING SHED MEMPHIS MILL.

Current Prices on Hardwood

The Hardwood Manufacturers' Association on March 7 issued its bulletin showing average market prices computed on its first hand report of direct

sales. Figures which come from this most reliable source are an excellent indication of what should be received for the various species of lumber referred to.

The figures follow:

OAK

The demand is generally active for all grades of Oak, with thick stocks in big demand. Wagon, vehicle and wheel manufacturers are in the market for enormous quantities of thick Oak which they are unable to obtain at the unsatisfactory prices they have offered which apparently have been arrived at without regards to cost or current market conditions. The average market price of Oak is as follows:

POPLAR

The demand for Poplar is as strong as ever. Stocks of Common and Better Poplar are badly depleted and production is very light. The demand for thick stocks on the part of the Government has developed into tremendous quantities.

The average market price for Poplar, F. O. B. Cincinnati, is as follows:

Is the Yearly Lumber Cut Increasing?

Many people take for granted that the production of lumber is increasing from year to year. Some of the sermons on the necessity of conserving our timber supply are based on that assumption. The fact is, no man knows whether the annual cut of lumber in this country is on the increase, or on the decline, or standing still. It may seem strange that nobody knows, in face of all the statistics that have been compiled in the past seventeen or eighteen years; but it is the condition of the statistics that is the reason why nobody knows, because nobody is able to interpret the figures to the point of finding out whether the cut is increasing or not. Following are totals covering the period from 1899 to 1915, both years inclusive:

Year	No. of mills reporting	Cut in feet
1899	31,833	35,084,166,000
1904	18,277	34,135,139,000
1905	11,666	30,502,961,000
1906	22,398	37,550,736,000
1907	28,850	40,267,154,000
1908	31,231	33,224,369,000
1909	46,585	44,509,761,000
1910	31,934	40,018,282,000
1911	28,107	37,003,207,000
1912	29,005	39,158,414,000
1913	21,668	38,387,009,000
1914	27,506	37,346,023,000
1915	16,815	31,241,374,000

Sixteen years ought to be time enough to show whether the tendency is up or down; but it only shows great variation when one year is compared with another. The figures further show a remarkable fluctuation in the number of sawmills whose output is included in the totals. In 1905 the number was 11,660; in 1909 it was 44,585, nearly four times as many; while in 1916 the number was 16,815.

It is not probable that any such fluctuations occurred in the actual number of mills at work from year to year. The apparent changes in number must have been due to failure on the part of mills to send in reports some years, while they reported other years. It is on account of such extremely fragmentary statistics that it is impossible to determine whether the cut of lumber has increased, decreased, or stood still since figures began to be first compiled in 1899.

The Chamberlin Bill

One of the most far-reaching measures ever proposed in congress, so far as the lumber industry is concerned, is the bill of Senator Chamberlain of Oregon authorizing the president to commandeer timber, standing or down, logs and lumber for the war purposes of the army, navy, shipping board and aircraft board. The bill was reported from the senate committee on military affairs recently after a secret session at which Director W. S. Gifford of the council of national defense appeared and testified. It is learned that administration senators plan to push the measure for early passage. Prominent lumbermen declare that they will fight the bill, not because they do not want to do everything possible to help the government win the war, but because they believe that the enactment of this legislation would give the industry a black eye in the mind of the public. Lumbermen hope to be given a hearing on the bill before a house committee when the bill comes up before that body.

Another bill of special interest to the lumber trade passed the house of representatives this week. It is to punish by \$10,000 fine and thirty years' imprisonment the destruction or injuring of war material and war transportation facilities by fire, explosives or other violent means, and to forbid the hostile use of property during the war. The bill would protect, it is believed, lumber mills and other establishments producing war materials and supplies, protect those products themselves, and all means of transportation and communication, together with buildings, bridges and other structures appurtenant thereto, wharves, docks, etc., ships, etc., used by the United States.

Civilian Workers Wanted for Ordnance Department

The ordnance department of the government is seeking civilian workers who have had high school education, some shop training and the natural ability to adapt themselves to new work to qualify for government appointment in which, under government instructors, they will receive the necessary training for positions to be filled. While the list is rather extensive, those positions that might interest readers of *HARDWOOD RECORD* are inspectors of gun carriages and parts, assistant inspectors of motor vehicles and artillery wheels, and inspectors of ammunition packing boxes. Inspection of the many things with which the government is equipping our armies is just as vital in the war as is the fighting itself and those who respond to the call will be volunteering for the national service.

Memphis Shy One-Half of Needed Logs

There is comparatively little improvement in transportation conditions in the Memphis territory as affecting the supply of logs available for the mills, with the result that those plants depending on the public carriers for their log supplies are being forced to operate intermittently. The Yazoo & Mississippi Valley Railroad has failed to furnish the 100 cars per day it promised recently for log handling, and difficulty is being experienced in securing anything like enough cars on either the Frisco or the Missouri Pacific system in Arkansas.

J. W. Dickson, at the meeting of the Lumbermen's Club, March 2, threw a great deal of light on the log situation on the Y. & M. V. road. The Valley Log Loading Company loaded approximately 1,150 cars in February, or an increase of about 200 on the Y. & M. V., compared with January, and an increase of about 100 on the Missouri Pacific in Arkansas. Still, it is not loading more than 50 per cent of what it has facilities to load and the whole problem resolves itself into a question of cars.

J. H. Townshend, secretary-manager of the Southern Hardwood Traffic Association, advises that the Missouri Pacific system in Arkansas has agreed to furnish more cars for log handling, but that the Frisco holds out comparatively little encouragement for any increase. He went to St. Louis to confer with officials of these two lines. Mr. Townshend estimates that there are 70,000,000 feet of logs ready for loading on the Y. & M. V., the Missouri Pacific, and the Frisco system, about 30,000,000 feet on each of the two first named and about 10,000,000 on the last. The time for flood waters is not far distant, and the logs are, in many instances, already beginning to deteriorate.

Mills having their own logging and railroad equipment are securing all the logs they need. Those dependent on water transportation, too, are faring exceedingly well. But those dependent on the public carriers are strictly up against it and they see little immediate prospect of relief. It is estimated that the latter mills are not producing more than 50 per cent of normal, but the steady operation of the mills securing their supplies with their own equipment or bringing out their logs on water is increasing the general output in this territory well above 50 per cent.

Conditions are favorable for work in the woods which is making better progress. Practically all firms report that they have plenty of logs ahead.

Shipments of lumber are showing little increase. In fact, conditions in this respect are hardly so favorable as they were a fortnight ago. Then practically all of Central Freight Association territory could be reached and lumber shipments could be made into part of Eastern Trunk Line territory. Now there are comparatively few shipments possible into the former, and none can be made into the latter. This is the information given by the Southern Hardwood Traffic Association. The Illinois Central, the Frisco system and the Missouri Pacific will all handle shipments for delivery at points on their own lines, but none of them will accept shipments of lumber for delivery to points off their own rails east of the Illinois-Indiana state line. The Mobile & Ohio will not accept shipment of lumber for delivery north of the Ohio river and this leaves the Louisville & Nashville and the Nashville, Chattanooga & St. Louis as the only available lines for handling shipments into the destinations in Central Freight Association territory open for receiving such.

Pritchard Returns—Will Push Work

John M. Pritchard, secretary-manager of the American Hardwood Manufacturers' Association, has, with the discontinuance of the Southern Hardwood Emergency Bureau at Washington, returned to Memphis and taken up his duties as active manager of the former organization which represents the recent merging of the old gum and oak associations.

Mr. Pritchard was drafted into the service in November, when the bureau was organized, as the most available man for its management. His services were loaned to the government by the old Gum Lumber Manufacturers' Association, and, when the gum and oak associations were consolidated and he was elected manager of the new association, his leave of absence was continued indefinitely.

The bureau, under the management of Mr. Pritchard, rendered good service to the government. It taught buyers of hardwood lumber and timbers for the government departments just where hardwood lumber could be bought, what the mills were capable of producing, where they were located and to what extent they might be depended upon for government requirements.

Mr. Pritchard brought with him to Memphis all files and letters bearing on unfinished business of the bureau, and, with the knowledge already imparted to buyers of hardwoods in the various government departments, the latter will in future address their inquiries to the National Hardwood Lumber Association at Chicago, and to the Hardwood Manufacturers' Association at Cincinnati. It is believed that these organizations will be able to furnish all the information desired.

Discontinuance of the bureau at Washington also releases other prominent lumbermen of Memphis and the Memphis territory from further government service, including H. B. Weiss, R. L. Jurden, W. A. Ransom and Ralph May, all of Memphis; and W. B. Burke, of the Lamb-Fish Lumber Company, Charleston, Miss. These gentlemen have been spending two out of every six weeks of their

time in Washington since last November, acting in an advisory capacity to the bureau and to the government buyers of hardwood lumber and timbers. They have rendered splendid service, but they are glad that their period of service is over because of the time required from their regular business. Officers and members of the association are delighted to have Mr. Pritchard back again.

Mr. Pritchard said today that he had no special statement to make beyond the mere announcement that he expected to get behind the association and push it in every way possible because he is convinced that the kind of service afforded the members will determine the real measure of success of this organization.

Practically all old members of the gum and oak associations have completed transfer of their membership certificates to the American Hardwood Manufacturers' Association and the latter has received ten members who were not identified with either of the old organizations. Eight of these were published in the last issue of the **HARDWOOD RECORD**. The other two are J. M. Card Lumber Company, Chattanooga, Tenn., and Bayne Lumber Company, Lefey, La.

F. M. Sibley of the propeller section, equipment division of the aircraft board, with headquarters at Cleveland, O., has requested the association to compile and file with him information regarding stocks in the Memphis territory available for the manufacture of airplane propellers, principally quartered white oak and quartered yellow poplar. He advises that contracts will shortly be let to about fifty firms and that he wishes this information so that he may direct the contractors to sources of supply. This information is being requested of the members of the association, and will be compiled and forwarded to Mr. Sibley every two weeks. Quartered red oak has been barred as a material for propellers, at least, for the present, according to the information that has been given out by those having the matter in charge.

Frank F. Fish Announces Discontinuance of War Service Bureau

As announced elsewhere in **HARDWOOD RECORD**, certain of the war service bureaus and committees of the hardwood interests that have been serving in Washington have discontinued the work, the interests represented having decided there was no further necessity for their presence at the Capital. In announcing the discontinuance of the War Service Bureau of the National Hardwood Lumber Association on March 1, Secretary Frank F. Fish writes the following letter:

"Conferences with the gentlemen in charge of the office of the director of lumber of the Council of National Defense with reference to the future necessity of maintaining bureaus in Washington covering hardwood lumber, have resulted in the conclusion that the quantity of hardwood lumber needed by the United States government direct and by our allies does not warrant the maintenance of any hardwood emergency bureau in Washington. It is further agreed that an emergency of sufficiently serious nature to warrant Washington offices is not likely to arise in the future and it is, therefore, entirely satisfactory to the director of lumber that the War Service Bureau of this association and similar hardwood bureaus now in Washington arrange to close their Washington offices and supply any future information desired regarding hardwood lumber direct from their headquarters. This decision refers particularly to the National Hardwood Lumber Association, the Hardwood Manufacturers' Association, Cincinnati, O., and the American Hardwood Manufacturers' Association, Memphis, Tenn.

"In view of the above decision, the War Service Bureau of the National Hardwood Lumber Association wishes to announce to its members that on March 1 the Washington office will be closed. Arrangements have been made with the office of the director of lumber and also with our allies whereby all inquiries for hardwoods and all information regarding the hardwood situation will be sent direct to our Chicago office, 1864 McCormick building, as well as to the other hardwood associations at their headquarters. Immediately on receipt of information from the director of lumber, or our allies, we shall place the inquiry in the hands of all of our members, requesting them to make quotations direct, either to the director of lumber or to the department of the government requiring the lumber, and we shall endeavor in all cases to furnish accurate information and positive instructions to members to enable them to place quotations direct before the party interested. Beyond any question this plan will result in economy of both time and expense, and enable the hardwood lumbermen to serve the government just as efficiently as if bureaus were continued in Washington.

"All unfinished orders will be handled from our Chicago office, and we shall endeavor to keep our members fully and promptly advised on all points referring to the requirements in hardwood lumber of the United States government or our allies."

With the Trade

Statement from Colonel Wood

Secretary E. W. McCullough of the National Implement and Vehicle Association sends **HARDWOOD RECORD** the following letter and statement from Colonel W. S. Wood, U. S. Quartermaster Department, Jeffersonville, Ind., and asks that it be published:

C. S. Brantingham, President National Implement and Vehicle Association. My Dear Mr. Brantingham: It has occurred to me, and in fact been brought to my attention, that the true status of the wagon and vehicle committee, that is, its official status may, as yet, not be clearly understood by all members of organizations involved in the manufacture of wagons, including the various lumber associations. Consequently, after talking the matter over with my association I have decided that it would be wise to have published in the different trade publications the enclosed brief statement as to the status of the committee, in order that it may hereafter be understood.

On this same subject when I formed the hide and harness committee it seemed wise to me that the standing of the committee should be well established at the time, therefore, at that time I published a brief similar notice in the various trade journals of that association.

I will, therefore, ask you if you will please see that the enclosed notice is distributed to the proper journals in order that it may reach all interested. The committee, together with Mr. Schrevesande, has been in session at the depot here since Friday morning, and will probably not finish its work until Monday, and even then we will have another meeting on Wednesday.

With my kind personal regards, I am,

COL. W. S. WOOD.

The statement dated Jeffersonville, Ind., February 17, gives a brief sketch of the history of the vehicle committee in the following words:

There was established in April, 1917, at the Jeffersonville depot of the quartermaster's department, and in the office of the Quartermaster-General at Washington, a wagon and vehicle committee, for the purpose of advising and assisting the depot quartermaster at Jeffersonville in placing the large orders for vehicles and transportation, which it became evident would be needed for the successful prosecution of the war. This committee was composed originally of R. V. Board of the Kentucky Wagon Manufacturing Company, A. B. Thielens of the Studebaker Corporation, R. W. Lea of the Moline Plow Company and E. E. Parsonage of the John Deere Company. The official standing of this committee is as follows:

1. It is the official committee of the Jeffersonville depot advisory to the quartermaster in charge of that depot.
2. It is a committee officially recognized by the office of the Quartermaster-General in Washington.
3. It is a committee officially recognized by the war industries board at Washington.
4. It is also an official committee of the National Implement and Vehicle Association.

This committee meets at Jeffersonville upon the call from the depot quartermaster and the actions taken from that depot upon the recommendation of the committee are the official actions of the quartermaster department, represented by the depot quartermaster.

Since its foundation this committee has been somewhat changed. E. E. Parsonage, now acting as the advisor of the War Industries Board at Washington upon matters pertaining to vehicles; and H. J. McCullough of the Emerson-Brantingham Company, having been added as a member, as was also Thomas A. White of the St. Mary's Wheel Company. P. B. Schrevesande of the Grand Rapids Equipment Company, Grand Rapids, Mich., representing some 1,200 manufacturers in the furniture industries, has been added to the sub-purchasing committee, and as advisory with the wagon and vehicle committee.

The sub-committee, so-called purchasing committee, meets every Thursday in Chicago at the LaSalle hotel, which meetings are open to those interested. Prices paid for vehicles, etc., are fixed by the War Industries Board upon the recommendation through proper channels of the depot quartermaster at Jeffersonville.

Memphians Reach France

There having been quite a number of members of the Twentieth Engineers, second forestry regiment, in the convoy with which the unfortunate Tuscania sailed, lumber circles have naturally watched anxiously for news of the safe arrival of many young lumbermen who joined this regiment. Word has been received at Memphis of the safe arrival of the following members of the Twentieth Engineers: Marion Wellford, Joseph Cooper, W. C. Thompson, Paul Rush, D. E. Thompson, J. J. Pilkinton and J. E. Catterhenry. Harold Weiss of Wynne, Ark., has also been heard of as arriving safely on the other side.

Becomes Manager of National Casket Company, Lumber Department

Malcolm Miller, well known in hardwood operating circles, has joined the forces of the National Casket Company, and is now manager of the lumber department, with offices in the Oliver building, Pittsburgh, Pa.

Mr. Miller has been manager of the hardwood department of the American Lumber and Manufacturing Company for the past few years, and in this and his past connection has made an excellent name for himself as a practical and accomplished hardwood lumberman.

Nickey Impressed With Necessity For Sacrifice

S. M. Nickey, president of the Green River Lumber Company, Memphis, just returned from a trip of inspection of his large timber holdings on the Pacific coast in British Columbia, told members of the Memphis Lumbermen's Club, at the regular semi-monthly meeting of that organization last week, that business men of Memphis and of the entire country must take a more serious view of the war if the United States is to achieve its ultimate goal, "Peace with victory." In his talk he said:

"The hospitals of Vancouver are filled with maimed and wounded, with men with one leg or one eye or no leg or no eye at all, and what I saw out there brought the war home to me in a closer way than anything with which I have come in contact. I feel different after having been there, and I want to say to you gentlemen that we must all take a more serious view of the war. We must realize that we must do business with the sole objective of helping to win this war. We must get back to the economies of our grandfathers and of our great-grandfathers. We must do with less of everything and support Liberty bond loans, thrift stamps and every other agency for raising funds. And the sooner we realize these facts the better it is going to be for us and the better for the country under whose protecting flag we live.

"British Columbia has sent 500,000 to 600,000 volunteers to the aid of the British Empire in this war, and if the United States had done as well it would now have an army of over 5,000,000 on the western front. The atmosphere out there is subdued, but beneath the surface there is that dominant spirit of bulldog tenacity which has made the British people so powerful in both peace and war."

S. M. Nickey was re-elected as national counsellor, as representative of the club, in the Chamber of Commerce of the United States.

An invitation was read from the National Wholesale Lumber Dealers' Association to members of the club to attend the annual of that body in New York City, March 27-28.

R. E. Dickinson, chairman of the river and rail committee, reported that the management of the Yazoo & Mississippi Valley railroad was not living up to its promises in connection with a larger supply of cars for log hauling. In this connection, J. W. Dickson, of the Valley Log Loading Company, said his firm was averaging forty-two cars per day on that line with three loaders and that it was not putting its other two machines in operation because the number of cars did not keep the present ones busy.

"We have forty-one customers for whom we load on that line," said Mr. Dickson, "and we are giving them an average of one car per day. Their average requirements run from one to twelve cars daily. We can load eighty cars per day just as cheaply as we can load forty-two. We have the equipment, the men and everything else necessary.

It was announced that a committee of the Southern Hardwood Traffic Association would hold another conference with Superintendent A. H. Egan of the road in question early next week.

The house committee reported that the employment bureau maintained by it had found positions with lumber firms for fifty-five persons during February.

The secretary was instructed to send circulars to members for the purpose of securing their vote on the proposition of greater development of the water powers of the country. This is a matter submitted for referendum by the United States Chamber of Commerce.

The attendance at this meeting was unusually large. Among the visitors was F. R. Gadd, assistant to President Robinson of the Hardwood Manufacturers' Association, and U. S. Lambert of the Stark-Lambert Lumber Company, Beaumont, Tex.

Texas Sawmill Changes Hands

The mill and timber holdings of the Athens Lumber Company, Aldridge, Tex., were recently purchased by the Keith Lumber Company, which operates a mill at Voth, that state. The mill at Aldridge has a daily capacity of 30,000 feet and cuts both pine and hardwood. Its lumber will be shipped to Voth for reworking.

Organize Interstate Lumber Company

The Interstate Lumber Company, with a capital stock of \$10,000 has been organized to do business in St. Louis, Mo.

The company will handle hardwoods and is composed of well known figures in the hardwood business. Office is in the Wright Building.

J. W. Thompson, formerly a master carter, is now at Memphis and of late associated with different hardwood concerns, is the organizer, vice-president and treasurer of the company. The other officers are: H. G. Haseall, Pickrel Walnut Company, president; J. P. Phillips, Pickrel Walnut Company, secretary. The other interested are: George E. Hibbard of Steele & Hibbard Lumber Company, St. Louis, and Kerby A. Raine.

J. V. Hill

J. W. Mayhew, assistant to the president of the W. M. Ritter Lumber Company of Columbus, Ohio, writes *Hardwood Record* the following letter under date of March 5, announcing the death of J. V. Hill, who was well known in hardwood circles, and who of late has been employed by the government as inspector of airplane stock in New Jersey:

"J. V. Hill, one of the most competent hardwood inspectors that ever got on a pile of lumber, who for years was in our employ, and later chief inspector of the Hardwood Manufacturers' Association, died in a hospital at Elizabeth, N. J., from complication of kidney and liver trouble, March 3, 1918, at 4 a. m. At the time of his death he was in the employ of the government as inspector for airplane stock at the Standard Aircraft Corporation at Elizabeth, N. J. G. S. Hill, his son, has asked me to notify you of his death, as he thought the many friends of Mr. Hill, who are readers of the *Hardwood Record*, while they would regret the fact of his death, would be glad to have the information. His body is expected in Columbus this afternoon. He will be buried from the home of his sister, Mrs. P. D. Shough, 511 Miller avenue, this city, at 3 p. m., Wednesday, March 6, 1918. He has another sister here, Mrs. J. O. Legg, 525 Gilbert street."

Rushing Wooden Buildings at Washington

To accommodate 10,000 new government employes made necessary by our entrance into the war, a million feet of lumber is being converted into three office buildings at breakneck speed in the national capital. Construction of the trio of office buildings, which provide exactly a million feet of floor space, was begun on October 11 and the entire project will be completed within the next few weeks. The three office buildings are supplemented by an administration building and a power plant, all of which are built of wood. Each of the three office buildings is three stories high, 420 feet long with six wings at right angles averaging 350 feet in length. These buildings occupy a park which extends from Seventh Street and from B Street North to B Street South near the site of the old Pennsylvania depot. The unusual quantities of supplies used in the buildings is indicated by the following figures—7500 double hung windows with frames, 30,000 pounds of sash weights, 1,000,000 feet of tarred felt for sub-floors, material for 65,000 square yards of exterior plastering and six carloads of nails.

Hardwood News Notes

◀ MISCELLANEOUS ▶

The Barr-Holaday Lumber Company has sustained a fire loss at its Holly Bluff, Miss., plant.

At Sagola, Mich., the Northern Saw Mill Company has incorporated with \$100,000 capital.

The Bohn Refrigerator Company has succeeded the White Enamel Refrigerator Company at St. Paul, Minn.

The capital stock of the Reynold Brothers Lumber Company, Franklin, N. C., has been increased to \$25,000, and that of the American Cabinet Manufacturing Company, New Albany, Ind., to \$150,000.

A fire loss has been sustained by the Jacob Jaekle Furniture Company, Buffalo, N. Y., and at Dubuque, Iowa, a loss reported at \$20,000 was suffered by the Farley & Loetscher Manufacturing Company, due to fire and explosion.

Recent incorporations are: The McMann-Carpenter Box Company, Detroit, Mich.; the J. C. Cobb Coffin Company, Blytheville, Ark.; the Ludington Woodenware Company, Wilmington, Vt., capital \$100,000; the Dixie Specialty Company, Knoxville, Tenn., capitalization \$10,000, for the manufacture of clothes pins.

The Shawano Hub Manufacturing Company, Shawano, Wis., has reorganized as the Shawano Box Company.

An increase in capital stock to \$600,000 has been effected by the North-east Casket Company, Fond du Lac, Wis.

The Wayne Millwork & Lumber Company recently began business at San Francisco, Cal.

A loss by fire is reported by the Wisconsin Land & Lumber Company, Hermansville, Mich.

The Old Planing Mill Company, Glasgow, Ky., has increased its capital to \$18,000, as has the Bockstege Furniture Company, Evansville, Ind., from \$195,000 to \$300,000.

A. W. Laing, T. J. Robson, C. H. Wetzel, George D. Hourless and G. L. Rice are the incorporators of the Kanawha Valley Lumber Company, Kanawha, W. Va., capitalization being \$100,000.

The Gillet Manufacturing Company, producing furniture at Clio, Mich., has increased its capital from \$20,000 to \$100,000.

Among recent southern incorporations are: The Standard Casket Company, Birmingham, Ala.; the Dempsey Camp Shipbuilding Company, Carrabelle, Fla.; the Sweeney Manufacturing Company, West Memphis, Ark.

At Buffalo, N. Y., the Standard Hardwood Lumber Company is reported to have sustained a loss by fire.

The capital stock of the Indiana Handle Company, Houston, Texas, has been increased to \$100,000.

At Portland, Ind., the Sheller Wood Rim Manufacturing Company announces a capital stock increase from \$25,000 to \$50,000.

At St. Louis, Mo., the St. Louis Manufacturing Company has been incorporated to do woodworking business with a capital stock of \$100,000.

◀ CHICAGO ▶

An involuntary petition in bankruptcy has been filed by the W. K. Cowan Furniture Company, this city.

The title of the Hoskins Body Company, Chicago, has been changed to the Graff Manufacturing Company.

John Roseen, Chicago, has filed an involuntary petition in bankruptcy.

Maurice Welsh, Welsh Lumber Company, Memphis, has been spending the past week in Chicago, being sick in bed most of the time he was here.

Among prominent northerners spending time in Chicago during the past week were: George E. Foster, Foster Latimer Lumber Company, Mellen, Wis.; George N. Harder, Rib Lake Lumber Company, Rib Lake, Wis.; Clarence Christensen, general manager Hackley, Phelps, Bonnell Company, Phelps, Wis.; J. H. O'Melia, Rhinelander, Wis.; J. P. Bushong of the Northwestern Coopers and Lumber Company, Gladstone, Mich.

The Lumbermen's Association of Chicago had a general rally at the headquarters at a luncheon on Thursday, February 28. The purpose was to awaken interest in the drive for funds in behalf of the work of the war recreation board. Chicago lumbermen are responding nobly to the call. Walter D. Wood, secretary of the executive committee of the board, was speaker, and C. B. Flinn of the war board of the Lumbermen's Association held the chair.

The Robert Maisey Lumber Company, J. C. Deacon & Co., and Henry Witbeck were the principal sufferers in a fire which destroyed the sheds of these three companies on Wednesday night, March 6. The total loss was about \$50,000 and is covered.

Albert Deutsch, president of the Sabine River Lumber & Logging Company of San Antonio, Tex., and president of the new Southwestern Hardwood Manufacturers' Club, passed through Chicago last week on his return from a month's stay in the East.

A committee of Memphis lumbermen composed of R. L. Jurden, R. H. Darnell, James E. Stark, C. R. Ransom and T. E. Jones met with Col. W. S. Woods of the quartermaster's department at Chicago last week and the question of supplying thick oak for war vehicles. They were told that the government has already ordered 240,000 wagons and 1,000,000 extra wheels from which it is estimated that about 300,000,000 feet of vehicle stock will be needed. In support of the lumbermen's side of the controversy over prices, the American Hardwood Manufacturers' Association has written a very strong letter to the vehicle committee in which the lumbermen's case is frankly and energetically set forward. The principal controversy now hinges on the recent cancellation of orders of a prominent southern vehicle manufacturer, it being claimed (and probably with justification), that undue and unfair influence was exerted by the vehicle men toward the cancellation of this business. It is stated that counsel has been engaged and that the matter will shortly be worked out on a more definite basis.

A letter has been received from the Hardwood Manufacturers' Association enclosing inserts covering changes made in the grading rules at the last annual meeting of the association. F. R. Gadd, assistant to the president, advises that these are now ready for distribution to the membership.

◀ BUFFALO ▶

The owners of timber in New York state, and especially of trees that they value as trees, are wondering if the coal shortage will not oblige them to sacrifice the trees more than they would wish to. The owner of a grove of more than 500 sugar maple trees, who lives in an adjoining county, said the other day that these trees looked pretty good to him as producers of revenue in the line of sugar, but he was afraid the public or the government would demand that he cut them down for fuel, which was the last thing he would think of doing. The hard maple tree has undergone many changes of value in recent years. It was once considered of not much account, except for show or for making sugar. Then suddenly it jumped high in value as a lumber tree, and now it will be hard to estimate which of the three values is uppermost. The value of sugar, however, is the only one that will save the trees as tapping them does not appear to hurt them.

The dry kiln of the Standard Hardwood Lumber Company sustained severe damage by fire on February 25, the loss being estimated by President Robert F. Kreinheder as \$80,000. The cause was a lightning stroke. About 160,000 feet of hardwoods in the kiln were burned. The firemen suc-

ceeded in confining the blaze to the building, though a large quantity of lumber was piled near by.

The Adirondacks are expected to be an important source of spruce for airplanes by next fall as the result of the completion of a short railroad line which has been under process of construction for some months. The line is a private one and owned by the White family. It runs from Rome into the heart of the mountains, and the additional shipping facilities are quite badly needed to open up for market several million feet of timber.

Fire in the factory of the Jaeckle Furniture Company on February 24 caused a loss of \$200,000, the three-story brick building being destroyed. The company was an old-established one, and is said to have been planning to go into the manufacture of goods on war contracts.

Three of Buffalo's lumbermen have been taking a short recuperation trip to Mt. Clemens this month, and enjoying the baths there, the party consisting of M. M. Wall, O. E. Yeager and Peter McNeil. They have been visiting this health resort nearly every year for a number of years past.

The Shortsville (N. Y.) Wheel Company has shut down its plant and will dispose of it with the equipment.

◀ PITTSBURGH ▶

The American Lumber and Manufacturing Company now has government contracts for more than \$1,000,000 worth of lumber for shipbuilding purposes. A large part of this is oak.

J. C. Linehan & Company, a new hardwood wholesale firm, are now nicely established at 527 Park building. "J. C." is looking up his old industrial and railroad trade and taking in some very nice business for a starter.

Building permits in Pittsburgh last month amounted to only \$414,688. This is the lowest total for February for many years.

The Frampton-Foster Lumber Company is filling many railroad orders at present for oak timbers and other lines of construction work. The company is constantly buying new lots of lumber through its agencies, and is taking mighty good care of its customers this year.

The Russell Shovel Company, whose plant at Aliquippa, Pa., was burned February 6, with loss of \$300,000, is arranging to rebuild at once.

The Acorn Lumber Company reports a fair demand for hardwood, but says that the shipping conditions are not easing up any to speak of, and that deliveries are extremely slow. Prices are pretty firm and on some lines are likely to increase in the near future.

The Joseph W. Cottrell Lumber Company, which has a big gum and oak operation at Lumber City, Ga., is turning out a fine lot of stock for which it finds a ready market. Mr. Cottrell spent two weeks lately at the mill.

The Duquesne Lumber Company reports that its hardwood operations in Tennessee are moving along as slowly as could be expected with the labor and railroad conditions as bad as they are at present. Demand is good and prices are getting better.

◀ BOSTON ▶

Herbert W. Bowler, well known in the New England hardwood trade as a former National Hardwood Association inspector, and subsequently with Holt & Bugbee Company of Charlestown, has now embarked in business at Waverly, Mass., handling principally native hardwoods.

A fire loss of \$250,000 was caused recently when the entire yard and plant of the Wm. H. Sawyer Lumber Company at Worcester, Mass., was destroyed. Circumstances surrounding the discovery of the fire and the current report of the firm's supplying of government stock have strongly established the suspicion of incendiarism.

The Young Lumber Company having outgrown its quarters at 95 Milk street, Boston, has moved to the Lawrence building.

◀ BALTIMORE ▶

M. S. Baer of Richard P. Baer & Co., is back from a southern trip, in the course of which he visited Mobile, where a large sawmill has just been completed for the Magazine Hardwood Company, the manufacturing end of the firm. The old mill, which was much smaller, will be dismantled and the machinery probably sold.

Among the visiting lumbermen here during the last week was John Morrow of the Morrow-Gorman Company of Chattanooga, Tenn. Mr. Morrow had been at Washington, in conference with some of the government officials, and booked orders for account of the federal authorities, amounting to about 3,000,000 feet. He went over the details with the authorities and took up the loose ends of the deal.

J. McD. Price, until now engaged in the wholesale hardwood trade here and before that secretary of the National Lumber Exporters' Association, has closed his office in the Knickerbocker building and will shortly move to Barnesville, N. C., there to take up the supervision of a sawmill on a tract of timber acquired in conjunction with Fred Arn of the J. M. Card Lumber Company of Chattanooga, and president of the National Lumber Exporters' Association. Mr. Price is to make his headquarters at Barnesville. It is stated that the timber is among the finest in the East, never having been touched before.

Frank Price, for years a widely known member of the hardwood trade, domestic as well as export, died March 6 after a short illness of pneumonia. Mr. Price was a son of the late Richard Price, and one of five brothers, all of whom became prominent in the trade, doing also an extensive foreign business. When still a young man he entered the office of his father's firm, Thomas & Price, but later organized the firm of Price, Welch & Co., which operated extensively in West Virginia. After the dissolution of this concern he entered the office of Price & Heald, of which his brother, Richard W. Price, was senior member, and when this firm changed, owing to the death of Richard W. Price, some six years ago, he established himself in the investment security business. Mr. Price had also been secretary of the Lumber Exchange about a quarter of a century ago. He retained much of his acquaintance with the trade and because of his debonnaire disposition made many friends. He is survived by his wife, three sons and a daughter.

The Baltimore Lumber Exchange at its quarterly meeting held March 4 at the Merchants' Club, made a number of changes in its by-laws, among them being an advance in the charge for inspection of lumber by the corps of the Exchange to sixty cents per 1,000 feet. Fifty-three cents of this amount will go to the inspector and the other seven cents of the Exchange, this being an increased income for the Exchange of two cents. The reason for the increase is the advanced cost of living, which has troubled especially the inspectors, who have had little to do all the winter in consequence of the closing of the bay by ice and the railroad embargoes. The buyer is to pay half of the inspection charge and the seller the other half. In the future also, there will be no five per cent less, the charge being net.

Other changes in certain charges were made to meet the increased cost of doing business, and the inspectors are to be required to obtain a license and a Lumber Exchange stamp, being required with the latter to mark their tally sheets. It was voted that the change shall go into effect at once.

The special committee named to arrange for a permanent meeting place for the Exchange, reported through Lewis Dill, in the absence of the chairman, P. M. Womble, that the committee had seen various localities and had also conferred with the management of the new Southern Hotel, which will open its doors next Wednesday for business. The management held out some strong inducements in the way of providing rooms and other things. The local promoter of the Old Colony Club was also seen and submitted proposals that are regarded as exceptionally liberal and advantageous. He stated, however, that no definite arrangements could be made until after the opening of the hotel. The Exchange, therefore, voted to let the matter go over without final action until the committee has had time to see the manager of the club when the hotel is conducting business.

The membership committee reported that the American Propeller Manufacturing Company and the Bagby Furniture Company, had been elected to membership. The former concern manufactures the wooden propellers used by aeroplanes.

After the business of the evening had been disposed of, the members sat down to a discussion and an excellent luncheon. Parker D. Dix, the president, occupied the chair, and L. H. Gwaltney was secretary.

◀ COLUMBUS ▶

President A. H. Kemper of the Toledo Lumbermen's Club has made the following appointments for 1918: Entertainment committee—Fred J. Puck, chairman, The Western Manufacturing Company; Chas. H. Schroeder, The C. H. Schroeder Company; Ira W. Gotschall, The Gotschall Manufacturing Company. Membership committee—Ben R. Johnson, chairman; Ben L. Stephens & Co.; John P. Bartelle, Kelsey & Freeman; Fred W. Duttweiler, F. W. Duttweiler Lumber Company. Advertising committee—Ben L. Stephens, chairman; Ralph B. Way, The Swan Creek Lumber & Supply Company; Walter D. Schuller, The Witker Manufacturing Company.

O. H. Bachtel, president and general manager of the Bachtel Lumber Company of Canton, was recently honored with the election to the presidency of the Canton Builders' Exchange.

The Rinderknecht Lumber Company of Dayton has been incorporated with a capital of \$50,000 to deal in lumber. The incorporators are George C. Rinderknecht, Sr., George Rinderknecht, Jr., Mary H. Rinderknecht and Catherine Van Allen.

The Sedalia Grain & Lumber Company of Sedalia, O., has increased its capital from \$25,000 to \$35,000.

The Mohler Lumber Company, North Canton, has increased its capital from \$20,000 to \$50,000.

R. W. Horton of the W. M. Ritter Lumber Company reports an increasing demand for hardwoods both from factories and retailers. The best feature at this time is the factory demand, especially from box and implement concerns. Furniture manufacturers are also buying rather actively. Prices are firm at the levels which have maintained for some time.

J. A. Ford of the Imperial Lumber Company reports a good demand for West Virginia hardwoods with prices well maintained in every particular.

Excellent work has been done by the Dayton Lumber Trade Exchange of Dayton since its organization in the latter part of 1916. This is shown by the progress obtained in getting the lumber trade of the Gem City better acquainted and doing away with petty jealousies and envies. One of the

most important works of the exchange is to eliminate as far as possible inaccuracies in the drawing off and mathematical errors in figuring lumber bills. To accomplish that end a Central Mill Survey Office is maintained. S. S. King is president; Henry W. Requarth, vice-president; John Westfall, secretary, and John W. Parent, treasurer.

< INDIANAPOLIS >

Many complaints have been registered with the Indiana public service commission during the last two weeks by shippers over the fact that so many empty cars have been sent through this territory, while no cars were available for local shipments. Many of the shippers, including a few lumber manufacturers, have made the claim that the railroads have been discriminating against the Indiana shipper. The condition was explained by railroad officials who said that they had received orders from the government to send the cars to western points. This condition has been improved somewhat, as most of the emergency demands in the western states are said to have been met successfully. Cars have been more plentiful during the last week, and conditions are said to be improving rapidly.

The National Lumber Company of South Bend, Ind., has bought the business of one of its competitors, the McErlan & Jackson Company. The latter company will retain possession of its ground and building until its business affairs can be closed. The members of the firm will retain their interests in the Builders' Supply & Specialty Company.

The Cannelton Planing Mills Company of Cannelton, Ind., has discontinued business. The company's plant has been operated successfully for the last thirty years.

< EVANSVILLE >

Elmer D. Luhring of the Luhring Lumber Company, and Henry Sauer of the Cottage Building Company, this city, returned a few days ago from Washington, D. C., where they went at the instance of the Evansville Chamber of Commerce to consult the war department in regard to securing contracts for making boxes for the government. The gentlemen were encouraged by their visit, and believe in a short time the local planing mills will be able to land some of these contracts.

The Klammer-Goebel Furniture Company of this city, has filed a notice with the secretary of state of the increase of its capital stock from \$60,000 to \$150,000. The officials of the company say the increase will be used to extend the business of the concern generally.

Bert Tisserand, who has charge of the hardwood end of the business of the J. C. Greer Lumber Company, recently returned from a business trip through southern Indiana, southern Illinois and northern Kentucky and reports trade picking up nicely, and in his opinion business is going to improve right along.

A boom has been started for the democratic nomination for governor of Indiana of Mayor Benjamin Bosse, president of the Globe-Bosse-World Furniture Company. Mayor Bosse is at the head of several other large wood consuming plants in Evansville, and is regarded as a man of splendid business qualifications.

George O. Worland, secretary and treasurer of the Evansville Veneer Company, reports trade coming along all right, and his big plant is being operated in most of its departments on steady time. Mr. Worland says he is looking for a very nice spring and summer business.

The Banta Furniture Company of Goshen has filed notice with the secretary of state that it has issued \$50,000 preferred stock, making the total capitalization \$100,000.

The building permits for February of this year in Evansville showed an increase of nearly \$4,000 over the corresponding month of last year.

The Sheller Wood Rim Manufacturing Company of Portland has increased its capital stock from \$25,000 to \$50,000.

Steamboats and towboats along the Cumberland river have the contract to carry several million feet of lumber to the site where the government will erect a large power plant at Hadley's Bend on that river. Boats are bringing in a great many staves and ties to the local port from points along Green and Barren rivers, with the resumption of navigation on those rivers several weeks ago.

Charles M. Frisse, secretary of the Globe-Bosse-World Furniture Company, reports the plant being operated on practically full time now, and he is looking for a very nice trade all year.

The Hercules Buggy Company, Evansville, has employed about forty girls in the plant to take the places of men and boys who have left the company to take up government service.

< MEMPHIS >

The E. Sondheimer Company announces that it has torn down its old mill at Sondheimer, La., and that work of replacing the plant with a new one began March 4. All the machinery and all the material necessary for the rebuilding of the mill has already been received and twenty-three millwrights have been secured to rush the work through to completion as soon as possible. A bonus will be paid for each day the con-

and Easiest Handling

buy the

Hoosier Self Feed Rip Saw. This machine has earned thousands of dollars for owners in the manufacture of dimension lumber, crating, etc., because its entirely novel design, resulting in surprising ease of operation and adaptability, makes possible a profit where a loss is often expected in this work. The

Hoosier Self-Feed Rip Saw

has a positive and powerful feed which handles the heaviest material the sawmill takes just as readily as the lightest.

The table, raised and lowered with the crank in front of the machine, is always level—always securely locked.

The Hoosier rips anything up to 6 inches thick and 17 inches wide. It feeds 35, 75, 100 or 150 feet a minute.

Manufactured exclusively by

tractor finishes the plant under ninety days. The mill, as rebuilt, will have a daily capacity of 50,000 feet of lumber.

Information reaching here from Rison, Ark., is to the effect that J. F. McIntyre & Sons of Pine Bluff, Ark., are building a mill on the Saline river, six miles from the former point, which will be used practically altogether for the cutting of hardwood material for use in filling government contracts. A tram road will be built to a connection with the St. Louis Southwestern (Cotton Belt) Railroad to facilitate handling the output of the plant.

The DeQueen Lumber Company, DeQueen, Ark., which recently began business by purchasing holdings of the Fitts & Burroughs Lumber Company in Arkansas and Oklahoma, has purchased 500,000,000 feet of pine timber near that point, and is planning the building of a planing mill which will be electrically driven, and which will have a daily capacity equivalent to that of the sawmill proper, ten cars per day.

The Madison Lumber Company, Tallulah, La., will have its plant in operation there in a few days. The necessary spur tracks and other facilities are being installed as rapidly as possible. This company was formed a short time ago, and has a capital stock of \$50,000. Rudolph Sondheimer of the E. Sondheimer Company, Memphis, is president of the company.

The Gayoso Lumber Company, which recently completed extensive repairs and improvements at its big hardwood mill in New South Memphis, began this week to operate it on double shift. It secured quite a lot of logs on its yards during the period it was closed down, and is thus insured a fair supply of timber for the immediate future.

The Crenshaw-Gary Lumber Company will soon begin operating its big barge on Sunflower river for handling lumber from its plant at Richey, Miss., to Vicksburg, where the Mississippi will be reached. The barge has a capacity of 500,000 feet or more. The company has several other barges of similar capacity to be delivered shortly, and these will be used for handling both logs and lumber. The barges have been purchased because of inadequate transportation facilities by rail.

F. E. Gary of the Crenshaw-Gary Lumber Company has sold his handsome home in Morningside Heights subdivision to Graham Smithwick, a cotton man, for a consideration of \$30,000. This is one of the handsomest homes in Memphis.

M. S. Shadburne, who has had ten years' experience in the general claims department of the Louisville & Nashville Railroad, has been installed as manager of the claim department of the Southern Hardwood Traffic Association. This organization has been handling claims for members since it was launched, and the amount involved therein has

All Three of Us Will Be Benefited if You Mention **HARDWOOD RECORD**

become so heavy that a speer man had to be secured to devote all of his time thereto.

Some idea of the handicaps imposed by the recent freeze in the Mississippi may be gathered from the statement of Max Sondheimer that it required more than two months for the E. Sondheimer company to secure delivery at Shreveport, La., of a towboat purchased on the Missouri river in December.

Officials of the Southern Hardwood Traffic Association and the American Hardwood Manufacturers' Association have about reached the conclusion that they will have no success in their efforts to secure an export licensing bureau for Memphis to issue licenses covering exports of lumber to Canada. They have found that cities as far away as New Orleans on the south and San Francisco on the west will have to secure their licenses from the bureau in Washington, and they expect Memphis to have to follow suit.

◀ LOUISVILLE ▶

Manufacturers and employers in general are just beginning to realize the importance of checking the proposed eight hour law for Kentucky, and as a result of this work it is believed that too much pressure has been brought to bear during the past few days for the law to be enacted. The Kentucky Manufacturers' & Shippers' Association, through its legislative committee, is waging a warm fight against this bill, while any number of trade organizations, individuals and big manufacturing concerns have gotten busy. A steady stream of protests has been carried to Frankfort by some of the biggest operators of the state. The coal, oil, railroad and other big interests are opposing the passage of the act, which would include all employes which are not affected by any laws already in effect. The Louisville Hardwood Club, at its last meeting, went on record as opposing the passage of this act, and has launched a protest against its enactment with the representatives of this district.

Edward F. Devol, sales manager of the Louisville Point Lumber Company, a concern with which he has been connected for the past five years, has resigned his position, having enlisted in the coast artillery division. Mr. Devol has gone to Columbus, O., from which point he will be assigned to service.

March 22 has been set by the Interstate Commerce Commission as the date for hearing of Docket 9991. W. P. Brown & Sons Lumber Company, Louisville, vs. Southern Railway Company et al., relative to rates on lumber from Brasfield, Ark., to Athens, Tenn., the Brown company asking for reparation on overcharges and establishment of a twenty-four cent rate as against a twenty-five and one-half cent rate, alleging violation of the fourth section. The case will be heard in Louisville.

George E. Wilt, for several years with the Pennsylvania passenger department in Louisville, who for the past few years has been in the Nashville department, has accepted a position with the W. R. Willett Lumber Company of Louisville, and will travel part of Kentucky and other sections. W. R. Willett, head of the company, recently returned from a trip to New Orleans, Nashville, Atlanta and Chicago.

D. E. Kline of the Louisville Veneer Mills has returned to Chicago in connection with handling the operations of the veneer manufacturers in connection with supplying the government with aeroplane and other needs produced by the veneer and panel manufacturers.

The scarcity of material is resulting in C. M. Sears of the Edward L. Davis Lumber Company of Louisville, spending practically all of his time in the South just now, in an effort to secure stock for the local company.

W. A. McLean of the Wood Mosaic Company of New Albany has gone East again to look after some interests. Just before leaving the city Mr. McLean had some of the French and English army officers stationed at Camp Taylor, Louisville, over to his plant to see how gunstocks, airplane stock and other war supplies are being turned out. Another recent visitor at the Wood Mosaic office was Mr. Litchfield of Boston, who is a member of the hardwood lumber house of Litchfield Brothers at North Vernon, Ind.

The labor situation in the South has shown considerable improvement with the return of spring weather, but the opening of the agricultural season, coupled with the second army draft, is expected to make the situation even worse than it was during the winter. At the present time the lumber manufacturers of the South are having much trouble in obtaining cars. For a time a fair supply of cars was being received, but the lifting of embargoes to points in the East and North has resulted in a heavy movement of cars out of the South under load. Many of the empties which ordinarily would have been returned to the South have been sent into the West and Northwest to move the grain crops, and as a result the car supply is now so short that the mills are having much trouble in getting logs in or lumber out. However, shipments are moving eastward into the Pittsburgh-Buffalo sections, although Boston and New York territory is still embargoed.

A new concern has been incorporated at Owensboro, Ky., as the Owensboro Wheel Company, capital \$100,000, to manufacture various types of wheels. Joseph W. Allen, John Reinhardt and L. G. Reinhardt are named as incorporators.

Lumber dealers who in the past have sold supplies of hardwoods to the Henderson Wagon Company of Henderson, Ky., can cut that concern off their lists. The plant has been down for some time, and was recently sold for \$52,000 to the H. J. Heinz Company of Pittsburgh, who will convert it into a pickle factory. The sale included property and buildings, but the woodworking and other wagon manufacturing machinery is yet to be disposed of.

VIRGIN TENNESSEE

The Mengel Box Company of Louisville, operating a large lumber plant at Hickman, Ky., recently lost a towboat, “The Mengel Box Company,” in a high wind on the Mississippi, near Hale’s Point, Tenn., opposite Osceola. The high wind filled the boat with water and she broke in two. A barge of logs was carried down stream, but will probably be caught. The steamer was waiting for a derrick boat to complete loading some log barges at the time of the accident. The vessel was valued at \$50,000.

At Somerset, Ky., the I. R. Longworth Company, spoke manufacturer, has resumed operations after being out for some time as a result of the recent floods in that district. The company is now buying material to manufacture spokes to fill government orders on escort wagons and artillery wheels.

A new concern, operating as the Edgett & Fulton Lumber Company, has been incorporated at Erlanger, Ky., with a capital of \$20,000, by J. R. Edgett, Minna Edgett and Blaine Fulton. Col. John Edgett recently stated that he had purchased timber in Tennessee and was planning to install a mill.

The Turner, Day & Woolworth Handle Company of Louisville, manufacturer of handles, chuck blocks and wood specialties, has also entered the spoke game. This company, through its state branch plants, has been handling local advertisements for hickory and white oak rived spokes at London and other towns.

R. C. McNay, head of the R. C. McNay Lumber Company of Crittenden, Ky., has succeeded J. W. Bennett as manager of the Williamstown Lumber Company of Williamstown, Ky., Mr. Bennett having enlisted in the Forestry Service.

G. B. Borders, purchasing agent for the McCammon & Keller Company of Lebanon, Ky., sawmill operators which has installed a new spoke factory, has been kept on the jump in supplying the mill with spoke material of late. Mr. Borders is offering to buy white oak and hickory spoke timber delivered at factory on side track on woods; split out in block, log or tree. In fact, he is willing to take material in most any form to obtain it.

Announcement has been made to the effect that the Huddleston Timber Company of Huntington, W. Va., has started work on the second boundary of timber recently purchased from F. M. Stafford, near Paintsville, Ky. J. H. Johnson who, for several years, has been with the Rock Castle Lumber Company, has secured a big crew and has gotten things well started.

◀ ARKANSAS ▶

The Sweaney Manufacturing Company of West Memphis, Ark., has filed articles of incorporation and received a charter to do business. The capital stock of this company is placed at \$25,000. This company is erecting a sawmill, installing new machinery, and will cut dimension stock. A. S. Sweaney is president and manager of the company.

The Standard Lumber Company of Texarkana, Ark., has recently filed articles of incorporation, showing a capital stock of \$100,000. H. P. Fouke, C. W. Fouke and George Weber are the incorporators. This concern has been in business at Texarkana for many years, but has only recently incorporated.

The Hicks-Stevenson Lumber Company of Mena, Ark., has bought thirty auto trucks to be used in hauling logs from the woods to the mill and lumber from the plant to the railroad.

Both William A. Priddle, snark of the universe and vice-president of the Beaumont Lumber Company at Beaumont, Texas, and Emerson D. Tennant, secretary-treasurer of the Concatenated Oder of Hoo-Hoo, Saint Louis, have signified their intentions of attending the big Arkansas Hoo-Hoo concatenation to be held in Hot Springs on the night of June 8, in connection with the fourteenth annual meeting of the Arkansas Association of Lumber Dealers, which will be held in that city on June 7 and 8. The two meetings coming together are expected to insure a large attendance, and Secretary J. B. Webster of the Association, who is also vicegerent snark for the state of Arkansas, is expecting the biggest and most successful gathering of lumbermen and Hoo-Hoo that has ever been experienced in Arkansas. The citizens of Hot Springs, through the Business Men’s League, are preparing entertainment features that will make the visitors long remember their visits to the Vapor City.

◀ WISCONSIN ▶

The Weidemann-Lindem Manufacturing Company, Marinette, Wis., manufacturer of lumber, interior woodwork, etc., has decided to establish a department for the production of coffins and caskets. An addition will be built to the plant at once and new equipment installed. The working force will be increased by about twenty-five men.

To get every piece of rolling stock into service without delay and keep it in good shape, the West Milwaukee car and locomotive shops of the Chicago, Milwaukee & St. Paul are now working a ten-hour day. About 4,500 men are affected. The car shop has been working nine hours and its 2,000 employees now are receiving overtime for one hour’s work a day.

Milwaukee box manufacturers furnished a large amount of box and crating stock gratis to Base Hospital No. 22, a Milwaukee unit which has been in training at the Milwaukee Auditorium for several months, and is now going into active service. Donations were made by the John Schroeder Lumber Company, August C. Beck Company, Mueller & Son Company, Kieckhefer Box Company and National Box Company.

American Lumber & Mfg. Co.
PITTSBURGH, PA.

The Winnegar Lumber Company, Winnegar, Wis., has awarded a contract to Ever Anderson, Ashland, Wis., for the construction of ten new dwellings for employees of its mill and yards.

The Anson-Gilkey & Hurd Company, Merrill, Wis., was compelled to close its mill and factory for several days last week when an engine cylinder head blew out.

Henry Stichter, David Hint and Ed Rossy, New London, Wis., have established a custom sawmill at the foot of Waupaca street, and expect to saw between 750,000 and 1,000,000 feet, mainly hardwood, for local consumers this season.

D. McVicar, Madison, Wis., has awarded contracts through Edward Tough, architect, for the construction of twenty-five dwellings in that city. This is only the beginning of an extensive campaign to be undertaken in Madison to furnish housing accommodations for about 1,000 workmen who have been imported in recent months to man two new ordnance plants and fill up the ranks of existing manufacturers.

Walter W. Oeflein, a well known building contractor of Milwaukee, is considering an offer to take entire charge of the construction of 1,500 workmen's homes to be erected at Camden, N. J., by the Newport Ship-building Company. The project involves more than \$3,000,000.

The Brown Land & Lumber Company, which has been operating at Rhinelander, Wis., recently incorporated with a capital stock of \$750,000, and will operate sawmills in Rhinelander and Parish, Wis.; Ray, Minn., and Champion and Helena, Ark. The concern also will open a cedar department, with headquarters at Green Bay, Wis.

The Colby Lumber Company, Colby, Wis., has resumed sawing operations for the new season and expects to cut about 750,000 feet of hardwood and mixed logs during the next sixty days. The logs are now being brought from its camps about six miles from Colby.

The Milwaukee Woodcraft Corporation has been organized at Milwaukee with a capital stock of \$25,000 by representatives of a number of woodworking factories in order to facilitate matters with respect to soliciting and handling government contracts for the production of airplane parts and other other wood war materials. Marshall C. Moss, president of the Rockwell Manufacturing Company; John W. Diercksmeier, manager of the A. F. Meckelburg Sash & Door Company, and S. H. Grobden, head of the S. H. Grobden Manufacturing Company, appear as incorporators. Representatives of the woodworking interests recently held a conference with George Ellis, secretary of the Lawson Airplane Corporation, Green Bay, Wis., with the idea of associating themselves with this concern for the establishment of assembling plants and that any government work received may be equitably distributed among the various companies in accordance with previous output and capacity. As soon as matters reach a greater degree of maturity, further announcements will be forthcoming.

Representatives of five or six potash manufacturers in northern Wisconsin met in Wausau, Wis., on March 2, at the invitation of C. T. Edgar of that city, to discuss the matter of the protection of the rapidly growing potash industry of the United States against foreign competition, during and after the war. As a result of the meeting, the Northern Potash Association was formed with the following officers: President, C. T. Edgar; vice-president, James Roper, Menominee, Mich.; secretary, A. E. Solie, Wausau; treasurer, H. B. Richmond, Shawano, Wis. A second meeting has been called at Appleton, Wis., on April 4. The consensus of opinion at the meeting was that Congress should place a protective tariff of at least ten per cent on potash.

Hon. Isaac Stephenson, Marinette, Wis., former United States Senator and noted lumberman, became a great-grandfather on Feb. 26, when a daughter was born to Mr. and Mrs. Howard S. George of Menominee, Mich. Mrs. George is a daughter of W. S. Carpenter, a widely known lumberman of Menominee. Mr. George is with the colors and at present is serving as a sergeant of infantry at Camp Custer, Battle Creek, Mich.

Charles W. Crotty, Tomah, Wis., who has been giving his services to the Wisconsin State Council of Defense for several months as market commissioner, has accepted an assignment to duty as a lumber expert for the government, and recently left Madison for Washington. Mr. Crotty is widely known in the logging and lumbering industry of the middlewest.

Capt. Alfred H. Wright, Merrill, Wis., who some time ago was commissioned as commander of a company of the United States Engineers (Forestry), expected to leave for France within a short time, according to letters received from Washington by his sister, Mrs. Hiram J. Smith of Racine, Wis., at the beginning of March.

The Hardwood Market

< CHICAGO >

Some commercial factories seem to be taking more cognizance of the effect which government purchases will have on supplies of lumber and veneers, at least, that would be indicated by the greater activity in some of these circles. Oak veneers, particularly, are moving well, seemingly having been stimulated in recent weeks by prospective shortage as well as by greater need within the factories themselves.

Have you seen any better Walnut logs than these?

THEY all grew right in Indiana where hardwoods have always held the choicest farm lands. The best growth of timber as well as the best yield of wheat comes from good soil. The soundness of the log-ends shows that they fed on the fat of the land. My

**The MOWBRAY
& ROBINSON CO.**

(INCORPORATED)

CINCINNATI, OHIO

In other lines such, for instance, as box lumber, the demand seems increasing and in all directions the price tendency is upward.

Such building as may be done this spring in Chicago seems rather late in starting, probably on account of continued severe weather, but when final figures are in, it will probably be found that the total is greater than anticipated.

◀ BUFFALO ▶

The hardwood market is in a little better position than a month ago by reason of the opening up of railroad transportation to some extent. This does not mean that business on the various rail lines is anywhere near normal, and delays are numerous as well as vexatious, but yards are reporting the receipt of a larger number of cars from the mills, including those of the South, and it is now somewhat easier to get lumber from the yard to the consumer. How long this improvement is likely to continue is a matter of conjecture, but with more open weather a good gain is looked for.

The demand shows up fairly well, though still confined to war order industries. Airplane, truck and shipbuilding concerns are thus the most important factors in the market, but a large number of concerns of various kinds are finding an increased need of hardwoods. In the furniture business not much is doing, though some plants in this line have adapted their equipment to the manufacture of products needed in the war and are thus doing a more active business than for some time past. The outlook for speculative building this spring is regarded as poor, as the money is not likely to be forthcoming for it.

Lumbermen are unable to do any export business without a license, a fact which some were not aware of until it was brought to their attention when an effort was made to ship stock. This, of course, cuts out a good deal of business for some concerns, which ordinarily do a good export business. But some trade is now being done, as it is not difficult to get a license where the stock is essential for war work abroad.

The Buffalo Chamber of Commerce is taking up the discussion of plans by which a greater amount of Niagara Falls power can be made available for the industries of the city.

◀ PITTSBURGH ▶

Hardwood men are very busy these days, especially the manufacturers. Country mills in Tri-State territory are hurrying operations in order to get just as much done as possible before the farming season begins when their supply of labor and teams will be cut into very badly. The continued calls from the drafts are also making bad work with mill forces. The supply of hardwood at the mills is not large, and if anything like normal shipping conditions prevailed it would very soon be used up. Demand for oak is the best ever seen in this city, especially for oak timbers. General and mixed hardwoods for mining and industrial propositions are also very badly wanted. Automobile demand is very much lighter than usual at this season. There is a pretty good call for furniture hardwood where it is dry and ready to ship.

◀ BOSTON ▶

There seems to be basis for reporting a still further advance in most hardwood items as spring opens. While previous developments had apparently gone to the practical limit for profitable manufacturing, the large prospective needs for war work, most especially in thick poplar, ash, maple, birch and oak, have served to again push up values. The confidence that transportation will begin to improve and that many partially suspended operations will try to start up leads to caution in booking orders where stock is so certain to be immediately absorbed. The government's policy of negotiation for stock on hand and to be manufactured at the mills, places the dealers in a very difficult position with much of their usual source withdrawn, and only incidental contact with the direct government usage in many departments.

◀ BALTIMORE ▶

The general situation in the hardwood trade here continues to be about as it has been for some time, with the difference that the weather now presents no handicap to the movement of stocks, and that such impediments as restrict the volume of business done must be sought in another direction. Among these impediments the foremost one is inability to make shipments, this applying to the mills as well as to the wholesalers and the yards. Some improvement in the transportation situation has taken place, to be sure, but very formidable obstacles are still encountered by the hardwood men, and they count themselves fortunate when they are able to get a few cars through. To have a permit is by no means always a certain way of having shipments taken care of, and the sellers therefore hesitate to take orders, not knowing if they will be in a position to make delivery. The needs of the government lying in directions other than most of the hardwoods, this division of the lumber business is far less benefited by the existing military needs than yellow pine, for instance, so that the hardwood men have no great amount of such business to fall back upon as a substitute for deficiencies in other directions. In addition, it is to be said that considerable shifting in the trade currents has taken place, and frequent readjustments are required if a hardwood man wants to keep going. Various new requirements have arisen, while old ones

are either eliminated or deferred for the present; hence the hardwood man must be constantly studying the situation to ascertain where he is likely to be able to place stocks. The prices received are on the whole good, it being mainly a question of getting the lumber to take care of the business that can be obtained, for such is the impairment of shipping facilities that the necessities of the users of hardwoods are for the most part ahead of their ability to get stocks. The mills are again in a position to take up operations, with little or no interference by the weather, but they find such scarcity of labor that many of the plants are unable to attain anything like their normal capacity, so that the production is not likely to run far ahead of the ability of the country to absorb the output. The scarcity of labor is also one of the causes that go to increase the cost of manufacture beyond anything perhaps ever experienced by the mills; consequently, there is small prospect that the market will slump on those dealers who have the courage to augment their holdings on the present basis. There are no developments in the foreign trade that would tend to give the situation a materially different aspect.

◀ COLUMBUS ▶

The hardwood trade in Columbus territory has ruled firm during the past fortnight. Buying is not as active as would be the case if shipments could be assured, but there is a fair demand coming in from all sections and prices are ruling strong. Indications point toward more active building operations than was expected several months ago, and that is giving a more optimistic view to the situation.

Buying on the part of factories is one of the best features. Concerns making boxes and implements are in the market for stocks. Some buying is also done by furniture factories. Factories are generally buying for immediate consumption, as they are not inclined to accumulate stocks. Some buying for delivery during April and May is reported.

Railroad traffic is slightly improved, but is still far from normal. Embargoes are still in force and congestion is reported at many junction points. Taking it all in all the warm weather has aided the railroads in securing better movement of lumber, as well as other commodities. Collections are not as good as formerly.

Quartered oak is strong and prices are unchanged from the previous announcement. There is also a good demand for plain oak stocks at former levels. Chestnut is strong and the same is true of poplar. Other hardwoods are unchanged.

◀ CLEVELAND ▶

Although marked improvement in outlet for practically all descriptions of lumber is noted with the turn of the month and the advance of more springlike weather, there is not the improvement in hardwoods in this market usually seen at this time of year. One reason advanced by wholesale interests is that dealers are still pretty well stocked up on all descriptions, and the other is that the real outlet for hardwoods, principally interior finishing of uncompleted construction, is still too early. The long and severe winter brought all building operations, so far as lumber working was concerned, to a standstill, and now that this work can proceed, most of it is still in the partly finished stage outwardly. Consequently, it will be several weeks, it is believed in hardwood circles, before the demand for these materials develops. The result at the moment is to bring some weakness into this market, more so in oak and maple flooring, which is wanted more than other descriptions, anyway. These will probably be among the last items taken on by builders. The present stocks are sufficient to meet a good inquiry. Receipts are better from the South, West and Southwest, in the last two weeks, than for months past, the improved weather conditions being instrumental in making for better railroad handling. This is a great relief to local lumbermen. Good demand for transits is noted in the last two weeks.

◀ INDIANAPOLIS ▶

The hardwood market is firmer than it has been in several weeks, but conditions are not as yet pleasing to the trade in general. More cars are available and the shipment of logs is proceeding in a more satisfactory manner, but freight restrictions continue to hold back the operations of the trade.

During the last week there has been a more optimistic tone in all lines of business, as it has been found that money is moving more freely than had been anticipated. The hardwood manufacturers of Indiana are especially pleased with the automobile outlook. A month ago motor car manufacturers were talking of reducing their requirements for hardwood, but the demand for pleasure cars and trucks has so increased as to cause the automobile trade to take a more optimistic view of the situation.

Consuming plants are also facing a more encouraging outlook. The furniture industries especially are heavier buyers, and report the general condition of their business improved. Box manufacturers are experiencing difficulty in filling the demand, and all box-making materials are bringing top prices. Woodworking plants in central Indiana are working on large contracts for the government. The demand for oak and hickory is strong, and there has been an improvement in the gum demand.

Architects and contractors report that there is considerable estimating being done, and that the prospects for the coming building season are better than had been anticipated.

◀ EVANSVILLE ▶

The hardwood manufacturers of Evansville and vicinity report that trade conditions appear more encouraging now than they have at any time for the past six months. Many of the large hardwood mills in this section that were forced to remain closed down during the cold weather in January and February are now running on full time. One large manufacturer said a few days ago that trade in the north and northwest just now is exceedingly good. Most of the river mills in Evansville remain closed, and it is not known when they will resume operations. Collections are good. Manufacturers report that logs are coming in more freely and the car shortage is not as acute as it was a month ago. The general opinion of the manufacturers is that cars are going to get easier and that it is going to be an easy matter to ship stuff east in a short time. The prices on the best grades of hardwood lumber are still tending upward and it is the opinion of the leading manufacturers in southern Indiana that the tendency for prices to soar is going to continue all this year. There is a splendid demand for quartered white oak just now and plain white oak is in better demand than it has been for some time past. Walnut is picking up some and there is a belief that gum is going to get stronger within a short time. Elm and maple are fairly strong and hickory and ash are good. Due to the fact that many of the box factories in this section are being operated on good time, there is a good demand for cottonwood lumber at this time. Quartered sycamore is moving along all right. Many of the large wood-consuming plants in Evansville and those at Tell City, Ind., Henderson, Ky., and Owensboro, Ky., are being operated on very good time. Building operations in Evansville are getting more active, and while contractors and architects say that the building this year may not compare to other years, they look for considerable building to be done.

◀ MEMPHIS ▶

There is an excellent demand for southern hardwoods. Very little salesmanship is required, but there is an extraordinary amount of energy and ability necessary in manufacturing hardwood lumber and in finding means of delivering it. The latter are the two big pressing problems confronting members of the hardwood trade here at this time, and they are making comparatively little headway because transportation condi-

Harris, McHenry & Baker Co.
LUMBER AND MILL WORK
 Elmira, N.Y.

November
 9th,
 1915.

Paepcke Light Lbr. Co.,
 Chicago,
 Ill.

Gentlemen:-

We are using your Red Gum lumber in the manufacture of our high class interior trim and general planing mill work.

This gum is giving excellent satisfaction, being highly graded, soft texture, good widths, and long lengths, also dry, straight and flat.

Respectfully,
 Harris, McHenry & Baker Co.

Dict.
 RRE/LG.

Of course it is true that

Red Gum

is America's finest cabinet wood—but

Just as a poor cook will spoil the choicest viands while the experienced chef will turn them into prized delicacies, so it is true that

The inherently superior qualities of Red Gum can be brought out only by proper handling

When you buy this wood, as when you buy a new machine, you want to feel that you have reason for believing it will be just as represented.

We claim genuine superiority for our Gum. The proof that you can have confidence in this claim is shown by the letter reproduced herewith.

Your interests demand that you remember this proof of our ability to preserve the wonderful qualities of the wood when you again want RED GUM.

Paepcke Leicht Lumber Company
 CONWAY BUILDING 111 W. WASHINGTON ST.
 CHICAGO, ILL.

Band Mills: Helena and Blytheville, Ark.; Greenville, Miss.

tions, affecting both log supply and lumber distribution, show so little improvement.

Owing to the reduced output and the relatively light stocks, the relations between supply and demand are considerably strained, and prices are firm, with an upward tendency. There is an exceptionally active demand for the lower grades of cottonwood and gum. The box manufacturers are absorbing these as fast as they can be produced and delivered. There is a good call for the higher grades of sap gum and for the upper grades of cottonwood. There is likewise an urgent demand for, with a quite limited supply of, box boards in both cottonwood and gum. Many buyers are unable to secure their requirements. Thick, plain oak, 6/4 and better, is in excellent demand, and indications are that there are large requirements which must shortly be filled on the basis of the statement that approximately 300,000,000 feet of such oak will be necessary for the completion of contracts already awarded for army wagons and extra wheels therefor, to say nothing of the quantity that will have to be manufactured to take care of other contracts to be awarded later. There is a good call for quartered oak in the higher grades, and high grade oak veneers are in very satisfactory request. Plain oak in No. 1 common is reported dull and there is but a moderate call for firsts and seconds red gum. Ash, hickory and cypress are in splendid call, and the movement is as large as offerings and transportation conditions will allow.

◀ LOUISVILLE ▶

There has been very little change noted in the market prices on hardwoods handled here within the past two weeks. There is a good demand for practically all southern hardwoods, excepting quartered oak, which is moving slowly, due to the fact that the furniture factories are not buying at the present time. Gum is fairly active and is maintaining its level in spite of the fact that the demand for interior trim is somewhat off. Hardwood flooring is showing some improvement, but has been quiet for months. During the past month there has been a heavy movement of southern hardwoods, which has been checked somewhat by the shortage of cars. However, orders are still coming in freely, and with embargoes lifted from all but a few far eastern points, the situation is generally better. There is a very strong demand for walnut and mahogany for airplane work, while walnut is still in heavy demand for gunstock manufacturing. Cutting clear firsts and seconds for filling such orders has resulted in the market being full of common grades and short dimension stock, which has not been in very active demand. At the present time the bulk of the hardwood demand is from concerns filling government orders and from the truck and wagon manufacturers, most of whom have government orders.

Ash, elm and hickory have been lively, and continue steady in demand and price, thick stocks of ash being very high. Poplar is also active, box-boards being especially good. The veneer trade and panel manufacturers have been working to capacity on supplying airplane stock or manufacturing airplane parts. As a whole, the hardwood trade in this section is in excellent shape, and the situation would be generally satisfactory if traffic conditions were normal.

◀ ASHEVILLE ▶

Good weather the past week has started logging and sawing again, although the labor shortage still gives concern to band mills in this territory. Eastern Carolina chair factories are showing considerable activity, and a good many orders were shipped last week to the East on permits and for government use. Dry lumber is scarce, and some green lumber is being marketed. There is strong demand for thick oak and for poplar, basswood and chestnut.

◀ MILWAUKEE ▶

As the season advances, conditions relating to logging in northern Wisconsin and upper Michigan become more uncertain daily, and within the last week or ten days the operation of some concerns have been badly hampered and interrupted by the arrival of soft weather, which has ruined iced roads and made the woods a sea of mud. The spell of moderate weather has just been preceded by the heaviest blizzard of the season. Since then weather conditions have been very irregular, as might be expected at this time of the year, and most loggers are hastening their work with all possible speed because the end of the season is believed to be near at hand.

On the whole, logging operations in the North during the winter now coming to an end were uniformly satisfactory, particularly with regard to climatic conditions during the greater part of the season. While the acute shortage of labor was a serious factor earlier, a fair amount of men were procured later, but their inexperience lowered efficiency. Abnormally high wages and greatly increased costs of all necessities made logging work this winter the most expensive on record and already is an important factor in stiffening lumber prices all along the line.

The demand for hardwoods of all kinds is maintained on a broad scale by government demands and the large requirements of industries that are working to a greater or lesser extent on war contracts. There is a comparatively enormous demand for box and crating stock, while orders for the finer and more select grades for purposes such as airplanes and other materials have assumed a volume far above that ever before experienced.

TIMBER LANDS FOR SALE

TEN TO TWO HUNDRED MILLION

As desired. Hemlock and Hardwood. Northern Wisconsin. No Commission. Address LAND COMMISSIONER, Soo Line, Minneapolis, Minn.

INDIANA HARDWOOD TIMBER & LAND

The estate of the late J. R. Johnston, comprising 1,525 acres of land over a million feet virgin timber, will be sold at public outcry on Monday, March 18, 1918, at Mansfield, 10 miles southeast of Rockville, in Parke County, Indiana. The property has been subdivided into 12 tracts, six of which, designated as timber tracts, contain land and timber as follows:

118 acres, 100,000 ft.	63 acres, 300,000 ft.
246 acres, 300,000 ft.	80 acres, 165,000 ft.
80 acres, 100,000 ft.	24 acres, 100,000 ft.

Timber will be sold with and without land - 800,000 feet of above timber is high-grade white oak, poplar, ash and hickory, oak and poplar predominating; remainder miscellaneous native growth. Inspection invited. For terms and information address PARKE DANIELS, Commissioner, Rockville, Ind.

TIMBER LANDS FOR SALE

From the Forest to the Ship Atkins Always Ahead!

Saws are the most needed tools of all. Not ordinary Saws, but Quality Saws that stand up under ceaseless war-time grind.

This is why ATKINS SILVER STEEL SAWS are closely identified with the great ship-building drive. The perfect ingredients of SILVER STEEL and exceptional workmanship make reliability certain in Atkins Saws.

Use them at once. Put war-punch to your production and reduce costs.

Perfect distribution enables us to offer the same superior Atkins Service as before. For catalog and prices, write or wire our nearest branch.

NORTHERN MANUFACTURERS**Ahnapee Veneer & Seating Co.**

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany & Qtd.-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

Kerry & Hanson Flooring Co.
Grayling, Michigan

We are members of the Maple Flooring Manufacturers Ass'n.

I Think It's Coming—

at least don't turn your back on the probability of extreme shortage of hardwoods this year.

I hope you're planning for that condition, for isn't that just one more reason why you should buy now from our unbroken stock of 15,000,000 feet of Southern Hardwood? It's made right, and it's piled right, on one yard that's built right—level so that all piles dry exactly the same.

You know what you want! Very well, your order will be shipped exactly as you place it, for my company **MAKES** every foot of lumber sold (25,000,000 feet a year) at the one big plant at Deering. Every log comes from its own solid boundary of timber, the best of upper St. Francis Basin growth. That means choice stock and absolute uniformity.

Not a board is picked out for either width or quality. It's shipped straight National grades containing the full product of the log.

This dope holds for the whole line—cottonwood, oak, gum, cypress, elm and maple.

Before the selection is broken, can I get you to talk over a trial order with my company? You will be treated right from the first day on—right lumber, right service and a follow-up clear through on delivery.

Sincerely yours,

WISCONSIN LUMBER CO.

GRAND RAPIDS VAPOR DRY KILN GRAND RAPIDS MICHIGAN

GUARANTEES

There is a difference in them — not alone in wording and salesmanship, but in intent, in actual service and in ability to perform.

The Grand Rapids Vapor Kiln guarantee is based on a scientific measurement; it is original and the result of our thirty years' experience in wood-working.

We know the difference between ordinary kiln operation and ordinary guarantees, and we know you do want dependable guarantees based on real service and tests.

Need we say more?

HELP

If you own any Walnut timber or know of anyone who has some suitable for making gun stocks to supply the boys who are going to Europe to fight for

UNCLE SAM

you will render a valuable service to the Government and your fellow Americans by telling us where the timber is located and how to reach the owner.

Walnut gun stocks are urgently needed to complete the necessary rifles for our army. The metal parts are being made on schedule but there is a serious shortage of stocks because the owners of Walnut timber are not offering it for their Country's use.

Our boys must have guns before they can go over and fight.

Tell us of any Walnut timber you know of and we will do the rest.

Let's all work together for the accomplishment of our one great purpose—

WIN THE WAR

THE GOLDEN RULE

Michigan Hardwoods *Cadillac Quality*

Nature has been generous in supplying Cadillac an abundant supply of superior timber and we are supplementing her work with the best methods of manufacture.

This has made Cadillac Quality famous.

Good timber, lumber well manufactured and seasoned, grades that are reliable and not blended to meet price competition, punctual service; — these are the elements of Cadillac Quality.

We sell direct to responsible dealers and manufacturers.

DIMENSION STOCK Mahogany and Walnut

Aside from our production of lumber and veneers—We are manufacturing kiln-dried mahogany and walnut dimension stock at the rate of 2,000,000 feet annually, and this department has been steadily growing since 1902. We think that these simple facts make detailed argument unnecessary—as to our prices, quality of our stock, and promptness of service.

However, we have ready for mailing a circular which explains in detail how and why you can save time, money and trouble—through our dimension stock.

But if you don't care for the circular, and if you realize what an expensive luxury your waste pile is, send us your cutting bills, as you would give them to your stock-cutters. We will quote a specific price for each style you manufacture.

C. C. Mengel & Brother Co.

High Grade Lumber

The hardness of oak varies as much as 50 per cent when they are compared among themselves, and there is a wide difference in the strength when their strength is compared.

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

TRY KNOXVILLE TENNESSEE

You can logically do so because you must ultimately depend more and more on this region for your hardwoods.

No higher type of timber can grow than that abounding in eastern Tennessee. It is found on a soil and in an environment which put quality in the trees generations ago. It is our task merely to see that this quality is utilized to the utmost in making the boards you buy. The best of equipment and highly trained organizations working in one place for years at a stretch make that task easy.

Then too you can be sure of getting the best possible service—always.

Ask about it from any of the following:

The Vestal Lumber & Mfg. Co., Knoxville, Tenn., & Fonde, Ky.

The J. M. Logan Lumber Company, Knoxville, Tenn.

The Little River Lumber Company, Townsend, Tenn.

The Babcock Lumber & Land Company, Marysville, Tenn.

(Main Office: Pittsburgh, Pa.)

MEMPHIS TENNESSEE

THE WONDER CITY OF HARDWOOD PRODUCTION

Agricultural Implements

Statistics showing the manufacture of agricultural implements in the State of Illinois give a fair idea of the kinds of woods demanded by the industry as a whole. Considerably more than one-third of all the agricultural implements made in the United States are produced in Illinois, the total in that state amounting to 137,000,000 feet a year, and for the whole country 320,000,000. Illinois uses 23 principal woods in this industry, and sixteen of these grow in the Memphis region. It is not practicable to determine just what part of the country's total supply of this wood is furnished by the country contiguous to Memphis, but a conservative guess would place it at one-half.

That is a pretty substantial showing for one region. The supply includes both hardwoods and softwoods, and the country east, west, north and south of Memphis produces these. Oak and hickory are the most important of the hardwoods, but ash, cottonwood, and gum meet a large demand. The yellow pines and cypress rank highest among the softwoods in this industry. Some of the woods are sought because they are strong and tough, others because they are light and take a smooth finish. Both kinds are wanted in certain parts of implements, but little wood is taken at haphazard. It is chosen to meet some particular requirement, and when a wood satisfactory for a special place has been found, it is seldom replaced by a substitute.

WHOLESALE HARD WOOD LUMBERLincoln, Nebr.,
May 28, 1917The Long-Bell Lumber Company,
Omaha, Nebraska.

Dear Sir:-

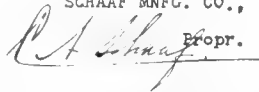

In answer to your letter of May 25, we will say that we are highly pleased with the Forked Leaf Brand of Oak Flooring purchased of you in January.

The select oak was graded as high as most manufacturers' clear oak flooring. One of the contractors to whom we sold flooring for 4 houses states that your flooring is so evenly matched that it will save about \$5.00 worth of labor on every thousand feet, compared with some other brands he had been using.

We are certainly glad that we got in touch with your brand of oak flooring, as it will no doubt be a good drawing card for our business.

Very truly yours,

SCHAAF MFG. CO.,

 Prop.

Our famous "Forked Leaf" Brand Oak Flooring can be shipped in mixed cars with Arkansas Shortleaf Pine.

BAND RESAWS

Kenova, W. Va., Oct. 1, 1917.

Gentlemen: The Standard Perfected Band Resaw which we bought of you a year ago is giving us perfect satisfaction. It has never failed us once, but it is on the job and ready for business all the time, and the more you give it the better it seems to like it.

Respectfully,

KENOVA BOX COMPANY.

Wm. B. Mershon & Co., Saginaw, Mich.

It Tells Just What the Consumers Use

ANY hardwood or veneer man considers his personal knowledge of the requirements of his own trade his greatest asset.

But he realizes that if that knowledge is confined to a limited number of concerns his sales will be the same year after year. Hence to grow he must acquire more knowledge regarding other possible customers.

Do you as a seller of hardwoods or veneers think it is good business to invest years of your time and quantities of your money to gather that knowledge when you can get logically collated first-hand and absolutely live and authentic information on thousands of such consumers and can have the use of it immediately after application?

The cost is nominal and the service is elastic in its form and can be made to fit your peculiar requirements exactly. Write now and get the benefit of the annual corrections.

HARDWOOD RECORD,

CHICAGO, ILL.

- 50.00 for 1st prize
- 40.00 for 2d prize
- 30.00 for 3d prize
- 20.00 for 4th prize
- 10.00 for 5th prize
- 5.00 each for next ten best.

Desiring to give every present user of the HILL STEAM NIGGER the benefit of the accumulated experience of its many operators, we have decided to pay the prizes above mentioned for the best articles submitted in writing, stating: (a) how you secure the best results in its use; (b) the methods and practices you employ in keeping the HILL NIGGER at its highest operating efficiency; (c) how you insure its long life and hold repair expense at a minimum.

For Your Guidance in Offering Contribution

In writing your letter, please keep the thought in mind that you are doing so for the benefit of the entire trade, as well as yourself, as we intend to use the information you and others give us to compile a book of information for HILL NIGGER users.

Do not be concerned as to your grammar, as what we are looking for is information, and the articles

will be judged on a basis of the value they represent to the Sawyer's Fraternity.

The only requirements are that your article be in our hands by June 1st, 1918, and that it consist of not less than 200 words. Please write on one side of the paper only. Prizes will be awarded and paid by July 1st, 1918, the winner's names and addresses being announced in prominent lumber trade papers.

You certainly can get one of these
15 Prizes
(Contest closes June 1, 1918)

A Chance to Help Your Local Branch of the Red Cross

We will gladly receive letters from any one connected with the Saw Mill Industry bearing, in a general way, on HILL NIGGERS. For instance: (a) cases of extremely long life of a particular HILL Nigger; (b) odd experiences in the introduction and use of the early-day Nigger; (c) reasons why the HILL is the favorite Nigger; (d) suggestions as to improvements; (e) discussions as to relative merits of the oscillating and stationary types, solid forged steel base bars, etc., etc., and will pay your RED CROSS Branch \$1.00 for each letter accepted.

EVERYBODY KNOWS

EVERYBODY ADMITS

That the
Hill Nigger
Is

- The Original . . . We originated it.
- The Best We have had 37 years to make it the best.
- The Cheapest . . . In the long run because of satisfaction secured. In first cost because of our quantity output.
- The Simplest . . . Our experience has shown us how to simplify.
- The Standard . . . Because it is the original, best, cheapest and simplest.

Vol. XLIV

CHICAGO, MARCH 23, 1915

25. 22.

General Market Conditions

DISCOURAGING WORDS COME FROM THE SOUTH as to manufacturing conditions. The fact that the logs are being loaded into the mills have not been a real time factor dependent upon the carriers for their transportation against a standard condition. Only the mills will improve their unloading equipment are able to keep their logs rolling. In fact, the south has the car situation because that is what is required there are 60,000 feet to 70,000,000 feet of log, and the logs are standing awaiting hauling in the Memphis region alone. More complete information on the Memphis shipping and production situation is given in an article elsewhere in this week. But the conditions described are having a noticeable bearing on markets, both as to demand and current prices.

Many a factory man is worried today over his supply of hardwood lumber, veneers or panels. Many let their stocks run down to a dangerous point and there is a scramble for a great many items. One large panel manufacturer said the other day that he has orders that he can't fulfill before fall and yet has been called on by four large factory buyers in the last two weeks, all of whom wanted to place additional orders. Nothing will bring our population to a quicker realization of the war conditions than interference by war work with the smooth running machinery of commercial work. The trade which buys hardwood products as raw materials is showing it is its evident desire to get in orders before the war demand makes more exhaustive inroads than it already has. A prominent walnut man who also handles other lines on his own account said recently that he finds a very active call for walnut from the furniture people. These buyers have no difficulty in understanding that walnut will show a very large percentage of production suitable for war work. Yet the same thing is true of many of our other hardwoods that never were before thought of for belligerent purposes. Quick trade is developing much faster than is commonly recognized and in most instances the cream of the product is taken. With stocks beyond hope of full replenishing and labor and shipping growing daily more of moment, there is the prospect ahead of nothing but a stronger and stronger market.

Another Point About Costs

COMMENTING ON THE INTERVIEW with the vehicle committee and Col. W. S. Wood, in charge of vehicle production for the United States Quartermaster's Department, as published in the last issue of *Hardwood Record*, a manufacturer said:

[illegible]

The first of these is the fact that the
 government has been unable to raise the
 necessary funds to meet its obligations.
 This is due to a number of factors,
 including the fact that the government
 has been unable to raise the necessary
 funds to meet its obligations. This is
 due to a number of factors, including
 the fact that the government has been
 unable to raise the necessary funds to
 meet its obligations. This is due to a
 number of factors, including the fact
 that the government has been unable to
 raise the necessary funds to meet its
 obligations. This is due to a number of
 factors, including the fact that the
 government has been unable to raise the
 necessary funds to meet its obligations.

But what is the point of talking about it? The only thing to do is act; and so it is necessary to hire a man to be working like this checking up on these and selling prices the people will more than repay the expense. Although everything is higher than it ever has been, there does not seem to be much chance for a recession.

There are a lot of people willing to argue that cost is not so high as it appears, but we will just leave it to anyone who is checking the cost directly on a cash-basis basis of including every item of cost. It is the way we account about sixty to eighty per cent of the business in mine.

Studying Scientific Lumbering

A DEPARTMENT FOR THE STUDY OF SCIENTIFIC LUMBERING has been organized by the government at the Madison, Wis., laboratory. It is in charge of Henry C. Hugel, who was until recently in the employ of the General Electric Company.

Just what "academic" achievement is and is not varies; it differs from the ordinary idea of learning, and even of the kind before it is widely clear, and there is even the well-known systematic study of the main aspects of the subject. There is no try has been at it, being carried on in many ways. At times, men do not make much progress in the same way, but they do achieve success in what is called the same way. Mr. Heide, however, will not make the mistake of thinking that

failures and attempts to point out the causes for one or the reasons for the other. Anything of that kind will help a good cause.

There are some thousands of practical lumbermen in this country who make it their daily business to study some part of the lumber industry. They are little concerned with theory, and they come directly to the point and search for ways to cut more lumber, cut it better, produce it more cheaply, sell it for more, and better meet the requirements of the users. They are making progress along all of those lines, and the lumber business as a whole is becoming more efficient.

A laboratory study, it may be assumed, will concern itself more with collecting and tabulating results worked out by others than with tackling original problems which no lumberman has ever seen or tackled. It may not be easy to discover any new problems in fields where others have been working for generations, but new solutions of old problems are possible.

Two master propositions confront all lumbermen. One is to make lumber without making so much waste; the other is, to dry lumber without so much cost in time and money. The man who can discover something practical in either of these fields will be a benefactor of lumbermen and of the lumber business. Thousands of workers and planners are edging in on both of these propositions all the while, and a little progress is noted from time to time. Sometimes one man, if he happens to be an Isaac Newton or an Edison, can go farther at one bound than thousands of others, traveling in the same direction, have been able to go in years.

No General Flood Yet

IT BEGINS TO LOOK as though the lower Mississippi valley may escape the customary spring flood. The snow went so gradually that no large rivers experienced high stages of water. There was some damage in the Ohio river, due principally to ice. It is not probable that rains alone can put the lower Mississippi above the danger line this spring. Floods seldom occur there unless rain combines with melting snow, and not much more snow is to be looked for during the spring, although rain in usual amounts is to be expected.

It is a matter of congratulation that the largest accumulation of snow which the upper Mississippi valley has known in years should pass away with so little flood damage. Three weeks of mild thawing weather, with little rain, did it. For a time the danger of disastrous floods was so apparent that there was reason for extreme uneasiness among lumbermen and mill owners from Cairo downward. Memories of inundated regions where all logging operations were forced to cease, are yet fresh in memory, and it is fortunate that such misfortune has missed this year. This good luck should bear results in better business; for not only has the escape from high water enabled camps and mills to go on with cutting logs and sawing lumber, but the railroads have been spared the usual visitation of loss of time and equipment on account of floods, and in consequence, transportation should be better.

Accumulating Need for Lumber

EVEN THE CASUAL OBSERVER must have noticed that few houses are being built these days and that ordinary repairs of buildings, fences, and other structures are being held down to the lowest possible level. The tendency is to put off such work where it can be postponed. The cost of material is pretty high and the price of labor is higher, and under these circumstances the owners of property are disposed to put off improvements until a more convenient season.

These conditions have cut down the sales of lumber. Many persons who need it are waiting for a better labor supply. Everybody is hearing sermons and lectures on the necessity of the strictest economy in order that the government may have all the assistance possible in carrying on the war. Those who need buildings or have planned repairs are waiting for the end of the war. The end is not in sight yet, but it will come; and after peace has been established, it may be expected that demand for lumber will greatly increase. Demands which have been accumulating since

the war called a halt on building, will be brought forward, and lumbermen must meet them. So far as can be foreseen, the call for lumber will surpass anything like it in our past history. Repairs which have waited two or three years will be put off no longer, and building plans that have been held back during a similar period will be put forward for action. It may be expected that the increased demand will clean out the accumulated stocks in lumber yards in short order. There is always some uncertainty when plans are based on what is to happen in the future; but so far as can be foreseen, the end of the war will bring a period of activity for lumbermen.

Don't Carry a Chip

THE STUPENDOUS JOB of creating America's war machine has, according to what shows on the surface, been carried forward with a record for absence of graft or scandal of other kinds, that can well give us cause for pride in the spirit of our nation. That such an undertaking carried through as an over-night project could be consummated without more lost motion, or waste or misdirection of money, is a tribute to the cause.

Inasmuch as the country had not even the organization to make the plans for the work, the first task was, of course, to select and appoint such men as would logically fit. With some notable exception has gone to men who in ordinary life would have interests the selections have been wise but of necessity the call for and training far apart. These men have had to be assimilated by the whole system. So it necessarily follows that in their contact with the manufacturing interests they frequently meet points of view with which they are not familiar and which sometimes do not seem, when taken at their face value, to be exactly right though in the practical analysis are easily provable as sound. For instance, there is the case of yellow pine ship timbers. Investigators from the Shipping Board at Washington "revealed" great numbers of big trees from which fine ship timbers could be made. So the Washington people let the impression get out that the yellow pine men were not living up to their obligation to the nation in the ship crisis. As a matter of fact the investigators entirely overlooked the facts that many of these big trees were cypress and not pine; that most of them were on tracts where no sawmills existed; that it would require considerable extra time and equipment to get at these far-off trees. So it was finally shown that the yellow pines' recommendations were practical and strictly in accord with the best means of practically helping the ship program. However, had either side entered the negotiations with a chip on its shoulder the building schedule would have been held up seriously.

Of course it might not be wise to be over optimistic but it is safe to assume that about everybody involved in the war work either in administering the use of materials furnished or in furnishing them is more than anxious to do the best he possibly can for the nation. Granting that, it behooves every man taking a part in the building of our war machine, whether he sells raw material, buys raw material, sells equipment or buys equipment whether he is with a private firm or a government department, to bear in mind that each man he comes in contact with is actuated by the same motives as he. If each man will come to realize that the man or firm or department he is dealing with has in mind just as he, that the first consideration is maximum service to the country there will be a minimum of waste in time and money. This is no time to carry a chip on your shoulder when dealing with a man in war work just because, though his being thrown by the necessities of the times into new fields of activity, he is not familiar with all the practical problems of your pet business. There are not many chips in evidence but there are a few and they should be eliminated.

We will probably some day come to the point of automatic grinders for all manner of saws, even down to the hand saw, for the progress in grinding wheels and machines is leading toward that point at a very lively rate right now.

Manufacture of Wooden Products

The census of vehicle manufacture in the United States during the year 1914 has been compiled and published by the government. The figures do not include automobiles.

The information should prove timely on account of the extraordinary demand for wagons for war purposes and the difficulty that seems to develop in meeting the demand for more than a quarter of a million of them. The statistics shown below represent peace times, and doubtless they would need to be completely revised before they would apply to present conditions.

During 1914 the total output of vehicles was 1,177,415. It is assumed that all of these were for horses. Five years before that, the total was 1,584,571, from which it is seen that the decrease in number from 1909 to 1914 amounted to more than 25 per cent.

By classifying the vehicles manufactured in 1914 it is found that there were 550,401 carriages, 572,409 wagons, 1,284 public conveyances, and 53,321 sleds and sleighs, and the total number of establishments making vehicles was 5,286. The decrease in the number of establishments from 1909 to 1914 was 327. The value of the output in the latter year was \$136,039,612, and in 1909 it was \$164,420,558, a decline in five years of more than seventeen per cent in value.

Three states, Arizona, Idaho and Nevada, did not report the manufacture of vehicles of any description in 1914, while the leading states in such manufacture were, in the order named, Illinois, Wisconsin, Indiana, and Pennsylvania. These states manufactured 58 per cent of all the horse vehicles made in the country.

The census gives no data concerning the kinds and amounts of wood consumed in the manufacture of vehicles, but the cost of materials of all kinds is placed at \$65,718,795 in 1914; \$81,951,288 in 1909; \$77,527,911 in 1904; and \$66,711,919 in 1899. It appears that less material was used in 1914 than in 1899.

The height of development of the carriage and wagon industry was attained in 1904, and since then there has been a steady decline. It decreased 11.2 per cent in number and 6.1 per cent in value from 1904 to 1909 and 25.9 per cent in number and 23.4 per cent in value from 1909 to 1914. Family and pleasure carriages decreased in output 42.6 per cent during the decade and 11.6 per cent during the five-year period 1904-1909 and 35 per cent from 1909 to 1914. The number of wagons manufactured has decreased steadily from census to census, the loss for the decade being 17.1 per cent, while the output of public conveyances decreased 55 per cent and sleighs and sleds, 59.2 per cent during the same period.

The Forest Service has published Bulletin 605, "Lumber Used in the Manufacture of Wooden Products," by J. C. Nellis. It is the final version of the investigations of wood-using industries by states that was commenced seven years ago. Preliminary figures were published by the government four years ago, and *HARDWOOD RECORD* gave a summary of the statistics at that time; therefore, the present bulletin does not deal with a new subject, but the old statistics have been revised and have been corrected in a number of particulars.

Fifty-three industries which work in wood are separately listed, and the kinds of wood used by each are given, together with the quantity of each wood. The total consumption of wood in the United States yearly by the fifty-three industries is stated to be 24,576,556,564 feet. This is approximately sixty per cent of the annual lumber production of 40,000,000,000 feet. It thus appears that about three-fifths of the lumber sawed in the country goes to factories to be further manufactured, while two-fifths is used in its rough form.

Sixty-five kinds of woods are used in quantities ranging from a yearly total of 8,610,685,624 feet for yellow pine, down to 28,189 feet for Turkish boxwood, the yellow pine being highest in quantity and boxwood lowest. As the term yellow pine is used in this bulletin, it means southern yellow pine only, and does not include

western yellow pine.

The wood which stands second largest in use is white pine; but that means eastern white pine and the western, but not the sugar pine of California, though it is also a white pine that contributes more than 50,000,000 feet a year to the lumber supply.

All of the oaks are included under a single head, and the factories get 1,983,584,491 feet of it a year. The maples are grouped in the same way, and likewise the spruces and hickories, and several other woods.

If the different groups of woods, which have been treated as one, had been separated into species, as white oak, red oak, chestnut oak, cow oak, etc., the total number found to be in use in the United States would probably exceed two hundred.

The bulletin does not give the use of woods by states but by industries only.

How to Cut Hickory

A hand book could be written on the subject of how to cut hickory—that is what to make it into and to what uses certain sizes can best be turned. A *RECORD* correspondent was reminded of this recently when the operator of a portable mill inquired where he might sell some hickory lumber. When asked why he did not reduce his hickory to specific dimensions so as to put it in shape to be more valuable as well as more easily marketable, he replied that he had tried that but had not been able to get the thing to work out right. Some smaller dimensions, which he thought might be worked into axles, were wanted in different lengths but he had become confused with it all and figured the simplest plan for him was to reduce his hickory logs to flitches and planks, and market them in that form.

Hickory as a rule is either made to specific dimensions or is re-worked to these dimensions at the consuming point. It is not a wood which is utilized in the form of standard lumber sizes, but is put to specific uses calling for a wide variety of dimensions.

Moreover somewhere along the line the hickory must be reduced to the specified dimensions. That is fortunate in a way, but it makes a problem and gives occasion for the need of a book on the subject of hickory. It is fortunate that we have many varying needs for hickory, for we have many varying lengths in the timber and it is only by confining many lengths and sizes that we can get a fair percentage of utilization and reduce the waste.

The trouble with the average man who has a little hickory to get out is that he knows of only a few sizes and shapes in which he can sell hickory. Furthermore if he did know of more shapes and sizes in which it can be utilized, he would not know where to market them. Taking it altogether here seems to be a splendid opportunity for hickory consumers to get out a hand book on hickory, giving an outline of the purposes or uses to which it may be put, and a list of dimensions for various uses, together with some suggestions of the comparative quantity required and possible markets for the different sizes.

The Forest Service occasionally gives a review of the hickory products and the possible percentage entering different branches, but they are necessarily briefs and while they give a general idea, they are not specific nor do they go into detail enough to satisfy the needs. What is needed is a complete hand book on hickory to the end that we may utilize to the best advantage the supply of the country. Hickory is one of the most valuable woods and is so scarce that practical steps should be taken to conserve it, to prevent waste and to realize the full measure of value from its products.

As compared to hand work, the mortising machine is one of the greatest labor-savers that has been invented. Also, it has done its share to make elaborately-framed woodwork available at reasonable prices.

Occurrences at Washington Interesting to Lumbermen

Personal Mention and the Activities of Various Boards and Committees

Although two of the hardwood war bureaus have shut up shop in Washington, it is reported that government war orders for hardwood material continue large. The Northern Hardwood Emergency Bureau, for instance, has received orders for 1,000,000 feet of birch propeller stock from the French government and 400,000 feet from the United States aviation corps. Eighty per cent of this must be 8 inches or wider and 8 feet or longer. Some of the stock may be from 7 to 8 inches wide. Roy H. Jones, manager of the northern hardwood bureau, says that this is difficult material to cut, owing to the fact that the grain must be straight, and long clear cutting is difficult.

Mr. Jones' bureau is run along different lines from the former hardwood bureaus. They were practically information bureaus. His is a selling agency. He says it will continue on the job.

The war department quartermaster corps has awarded contracts for motor truck bodies to the Mulholland Company, Dunkirk, N. Y.; Hercules Buggy Company, Evanston, Ind.; International Harvester Company, Chicago; Theodore Kuntz, Cleveland, O.; Grand Rapids School Equipment Company; Continental Car Company, Louisville, Ky.; Eagle Iron Works, Auburn, N. Y.; J. G. Brill Company, Philadelphia; Hopkins Manufacturing Company, Hanover, Pa.

It has given contracts for wooden wheels to the Prudden Wheel Company, Lansing, Mich.; Bimel Spoke & Wheel Company, Portland, Ind.

The war service committee of the furniture and fixtures and allied woodworking industries not long ago closed a deal with the quartermaster department of the army for furnishing about \$12,000,000 worth of wagon and truck bodies and aero propellers and parts. This order has been distributed among many different concerns.

The navy department wants 16,000 feet of ash, firsts and seconds; various lots of first white ash; 8,000 feet white hickory, all firsts; 22,000 pounds lignum-vitae; 30,000 feet of hard maple; miscellaneous lots of white oak; 7,000 feet of black walnut, firsts and seconds; 32,000 feet of cedar boat boards; 96,000 feet of white pine; 400 North Carolina pine piles, creosoted; 75 Douglas fir spar timbers; 65,000 feet redwood pattern stock.

Matters connected with the vehicle material supply available for war purposes of the government are up this week at a series of conferences between J. M. Pritchard, Ralph Jurden, and John McClure, representing southern hardwood lumber interests, on one hand, and officials of the council of national defense, war department, and vehicle manufacturers' association on the other hand. The vehicle committee of the council of national defense has been in on the matter. So has Mr. Thielens, representing the procurement committee of the wagon manufacturers association. The lumbermen conferred with Col. W. S. Wood of the quartermaster corps of the army. Mr. Pritchard stated that it is not a question of prices that is up. The government needs large quantities of vehicle stock for army escort wagons, truck bodies, ordnance carts, artillery, ambulances, etc. Some of this is bought direct by Uncle Sam, but most of it probably will go to government contractors who will turn it into finished articles.

There is a committee of the railroad administration at work on specifications for standard freight cars, of which from 100,000 to 250,000 are to be built in box, gondola and flat types. T. A. Greene of the Southern Pine Association is advising with the railroad administration regarding specifications, etc. They understand that the committee has decided against all-steel cars, but in favor of steel underframe cars. They hope that all-wood super-

structure cars will be decided upon and in that case that yellow pine will be specified for most of them. Millions of feet will be required. The favorite specification it is reported, calls for a double sheathed box car requiring much one-inch material that is being cut incidentally along with the ship schedules.

The railroad administration is working out a system of standardizing equipment and supplies. There is a central purchasing committee and regional committees in the East, South, and West. Railroad ties and lumber will generally be bought along their lines by individual roads, but if these materials are not available there, the advice of the central committee will be sought.

The Southern Pine Association may be required to replace 100,000,000 feet of lumber in the retail yards that was taken by the army purchasing officers for emergency uses. The quantity will be determined by the war department. The price will be the government emergency bureau price. Yellow pine may replace hardwood, pine, hemlock and other kinds of lumber in the yards. A bonding company will give bond to guarantee the credit of the retailers, some of whom are not known commercially to the yellow pine men.

The southern pine bureau reports 36,000,000 feet of orders received and the Georgia-Florida bureau from 5,000,000 to 10,000,000.

Eight million feet of southern pine comes to Washington for government construction operations. Uncle Sam is undertaking here the erection of about a dozen buildings, some of them larger than the United States Capitol, for accommodating government departments, including the war and navy departments, war trade board, food and fuel administrations, shipping board, etc.

They are part of a billion dollar government construction program undertaken all over the country, not to mention France. This program is largely under the new construction division of the war department, which replaces the cantonment division. The work in prospect includes storage terminals at Boston, Philadelphia, Charleston and twenty-eight other points; signal corps cantonments and aviation fields at forty places; powder loading plants and ordnance depots on the Atlantic coast; enlargement of the Nashville powder factory; housing facilities for ship workers at sixteen points; tuberculosis hospitals at Azalea, N. C., and Denver, Colo.; mechanical repair shops in Texas; remount station at Charleston and other points; hospitals at Fort Riley, Kans., and Tenafly, N. J.; extensions of the Springfield, Mass., and other government arsenals; gas making and shell filling plants.

A committee headed by Prof. A. N. Talbot of the university of Illinois has worked out a new kind of contract for this work that is said to be profiteer proof.

John Wharton Maxcy has been made head of a provision board under the shipping board to see that lumber is manufactured and ships built as rapidly as practicable. He is a Houston, Tex., engineer.

A conference on industrial housing among lumbermen and others at New York is planned. The general housing bill will soon pass the house with \$50,000,000 for housing employees of munition factories, etc.; also carrying \$10,000,000 for housing government clerks in Washington, D. C., in which connection extensive dormitories, restaurants, barracks, and houses are planned.

The aviation program is being investigated by three agencies of the government on the charges of profiteering of government contractors, slowness in operation, failure to accomplish results, etc. It is said that the aviation program is 90 days behind schedule time, but that many battle planes will be ready for Pershing by July and that the year may see the aviation program catch up with schedule.

A survey of timber supply throughout the world is planned by Col. House, the president's friend, it is reported. Dr. Zahm, a Washington scientist, will supervise the work. He is said to be desirous of finding men who are familiar with timber resources of Africa, Latin America, Asia, and other distant lands.

It is reported that after the shipping program has developed so as to take care of necessary war needs abroad, the administration will propose to cut down production of lumber and other things not necessary for war and other unavoidable purposes, and to divert labor now employed in those industries to the farms and shipyards of the nation.

The war trade board has issued instructions to railroads that export shipments of ash, birch, oak, walnut, mahogany wood in shooks, staves or other forms, and yellow pine lumber 12 by 12 inches and larger and 24 feet or longer will have to have a special license.

With the arrival of March 10 the question of prices arose again. Delegations representing the Southern Pine, Georgia-Florida, Alabama-Mississippi, North Carolina and Douglas fir lumber associations were in Washington on the ground for some days discussing the question among themselves and with various government officials, notably the federal trade commission. Price increases on government business of \$1 to \$2 per 1,000 feet are wanted by the several interests.

The trade commission is considering data submitted by the lumbermen as to the cost of production and it will report on that to a new price fixing committee of the war industries board, which will fix prices voluntarily, but backed by such government authority to commandeer and control fuel, transportation, shipping, labor, food, materials, priority, capital, etc., that the committee's work will doubtless carry great weight.

The chief contest seems to be over the southern pine prices. The Georgia-Florida and Alabama-Mississippi people are standing with the Southern Pine Association on this matter. Their views were presented to the trade commission at a hearing lasting all day. President Charles S. Keith of the Southern Pine Association was spokesman for the industry. He made out a good case showing big increases in costs, owing to labor and materials advances. He and Dr. Haney, economist of the commission, were far apart in their figures to the extent of \$4 per 1,000 feet on costs. Haney's figures, however, were from 21 mills, Keith's from 200 mills. The lumbermen felt that Haney selected certain mills to get his figures from, which were not representative. After getting the actual cost of production in efficient mills, Keith argued, a percentage should be added to bring that figure up to the level of cost in inefficient mills. Haney, on the other hand, contended for an average cost figure. He finally admitted that his figures were jumbled.

The chief difference was over the cost of stumpage. Haney argued that the original cost should be taken with additions for taxes, etc., since then. Keith argued that the present cost of stumpage on the market should be accepted by the commission. Commissioners Fort and Murdock appeared to agree with him. Haney at one point charged that the lumbermen were camouflaging. This was resented by Keith and others. Charles Edgar, acting director of lumber, sat with the commission at the hearing.

The North Carolina delegation, consisting of Mason Cooke and G. L. Hume, conferred with Haney about costs and will continue conferences in a few days. The fir delegation has conferred with Mr. Edgar and J. H. Ransom, representing the Pacific Coast in the lumber director's office. Their delegation included W. B. Nettleton, G. T. Gerlinger, J. H. Bloedel, H. B. Van Duzer, and Howard Holland.

Mr. Keith presented an exhaustive brief to the commission in which after arguing over various points at length, he gave a number of examples of how costs should be worked out by different operations, and also many pages of tables showing that the costs and government prices should be worked out on the basis indicated for many sizes, grades, and dimensions of lumber. Mr. Keith and other yellow pine men later appeared before the price fixing com-

mittee. The latter will consult Mr. Edgar and the trade commission.

The trade commission also gave a hearing recently to S. W. Stratton of the New England Box Company, Cost Expert Radewski of the Chicago Mill & Lumber Company, Mr. Ames of the Pioneer Box Company, and representatives of the fiber and corrugated box makers on the subject of the cost of producing boxes used in shipping canned goods and other food for the United States army and navy and the allies. The commission is advising with the food administration and representatives of other departments of the government on this subject.

The Council of National Defense has issued a statement that under the authority of the War Industries Board there has been created a body to be known as the Price Fixing Committee with its personnel composed of Robert S. Brookings of the War Industries Board, chairman; Brigadier-General Palmer E. Pierce, surveyor general of supplies for the War Department; Paymaster John Hancock of the Bureau of Supplies and Accounts of the Navy; Dr. H. A. Garfield, Fuel Administrator; F. W. Taussig, chairman of the United States Tariff Commission; W. J. Harris, chairman of the Federal Trade Commission; Hugh Frayne of the War Industries Board; and Bernard M. Baruch, ex-officio. Another civilian member of the committee will later be appointed.

The duties of the price fixing committee will be to pass upon prices for all basic raw materials and to establish from time to time a price fixing policy to be submitted to the President for approval. Any of the executive departments having difficulty in the handling of price fixing matters will have the advice and assistance of the committee when desired.

The object is two-fold. First, it will be a separate body, quasi-judicial in nature, for the purpose implied in its name and it will serve this purpose through being made up of men separated so completely from industrial interests that their motives and actions in the determination of prices can be subject to no suspicion of mercenary interest. Prices will not be made until after costs have been passed upon by the Federal Trade Commission. With costs as a basis, the price fixing committee will then consider problems of production and distribution before arriving at its decisions. The second object to be achieved is speed. The committee will sit all the time and will thus eliminate unnecessary delay caused by the consideration of price fixing problems in several different quarters.

The food administration has adopted the specifications of the National Canners' Association for wooden boxes used in the domestic and export trade. These specifications cover nailed wooden boxes, lock corner boxes, and other styles of boxes, some of them with strap metal around them. The woods permitted in one or another or more of the types of boxes include many hardwoods, such as aspen, cottonwood, yellow poplar, chestnut, basswood, willow, magnolia, buckeye, butternut, cucumber, elm, gum, ash, sycamore, maple, beech, oak, hackberry, tupelo, birch, pines, fir, spruce, larch, hemlock, cedar, cypress and other softwoods.

The appointment of John H. Kirby of Houston, Texas, vice-president of the Southern Pine Association, as the government's lumber administrator for the South, and modification of the Ferris type wooden ship to meet limitations of natural growth of the southern forest stand, are announced, following a three-day exchange of views between representatives of the southern pine lumber industry and the United States Shipping Board.

Word has been sent to southern pine mills that the Shipping Board would no longer insist on frame timbers wider than 24 inches. This is a reduction in size from a maximum of 34 inches. Southern lumbermen have for months contended that the laminated or built-up timber is entirely practicable for the framing of a wooden vessel, and this view has been sustained by actual ship-building operations recently carried out with great success in private yards. This method of construction will at once be put

into effect on the Atlantic and Gulf coasts, both as to Ferris ships now building, and those to be built in future along the Gulf. Original specifications will be adhered to in building Ferris ships on the Pacific coast, where large size timbers are easily available.

Architects of the Shipping Board are now engaged in designing a modified form of Ferris ship, contracts for 150 of which will be awarded Gulf coast shipbuilders as soon as ways for them are empty or new ways constructed. These ships will be built of southern pine.

Southern pine manufacturers who have been attending the meetings pledged the industry to produce timbers sufficient to construct 300 modified Ferris ships a year, in addition to schedules on which the mills are now working.

A timber survey of the South will at once be undertaken by the new lumber administrator, to ascertain definitely the forest re-

sources of the section as they may be applied to ship construction. Mr. Kirby will establish headquarters in New Orleans, and will have complete authority to take all necessary steps to get out timbers needed for the Emergency Fleet. Plans are now being considered for the holding of a mass meeting of lumbermen to consider means by which the closest co-operation with Mr. Kirby will be assured.

Mr. Kirby has gone South to take up his new duties, armed with a letter from General Manager Piez of the fleet corporation giving him plenary power in matters of making placements, getting the lumber, keeping tab on mills and shipyards, etc. W. J. Haynen, chief of the board's lumber department at New Orleans, will be under Kirby. The modification of the ship schedule is a big victory for the lumbermen. It means adoption of a modified Hough or Donnelly type of boat using built-up timbers, similar to the big wooden ship recently launched at Orange, Tex.

The Sawdust Trail

Big Things in View for National Meeting

The largest and most active operators in lumber in the United States will follow the trail to Chicago next month, where the annual meeting of the National Lumber Manufacturers' Association will be held at the Congress Hotel April 8-9. This will be perhaps the most important meeting ever held in the lumber trade. The National association is composed of the principal manufacturers' associations of the United States and is a delegate body. As indicated by its program there are many big subjects which it looks after. The directors made a step forward at the last meeting in Chicago by employing General L. C. Boyle of Kansas City and making him general counsel of the association, and the general is now living in Washington to fulfill that commission. A little visit with him the other day at Washington convinced me that the things in hand which the southern pine men are interested in extensively would give a great business lawyer like the general a chance to do some great work, and he is doing it. He has opened an office in the Southern building, and is a busy man.

There will be a new set of officers selected, and probably an association, "Ty Cobb" selected for secretary. The activities of this association should be the most aggressive in the industry, for the problems that they must solve are very great. As an instance, the tax proposition today means much to the lumber trade. Is it being handled in a consistent way? Are the legislatures being canvassed, and government policies brought thoroughly to the attention of all the big timber owners? If not they should be. And the machinery should be provided by the National to put the lumber trade before the tax commissioners and legislators, as to whether it will be war taxes or local taxes, in a way that is consistent and fair to both the government and state, and the industry itself.

One trouble in the past has been that the lumber trade has never been a unit on any one question. There is too likely to be a lot of strong-heads that cannot agree among themselves, and the result is that the whole industry suffers because of the lack of co-operation.

The timber holdings of a company should be separated from the manufacturing end of the game, and should be on an investment basis, the same as any piece of real estate or other permanent investment. Too many manufacturers of lumber have figured that if they made money just because they had been forehanded and bought the timber in advance, they would be satisfied. How can you operate two or three kinds of business, and rob one to pay the other and successfully get the proper dividends? The trouble with the American people is that they never were willing to permit lumber manufacturers who own timber to run their own business.

The talk on building and loan associations is a step in the right direction, and we hope that the subject will be handled by Mr. Haymaker and Mr. Moorehead in a way that it will assist the cam-

paign to build now. Why put it off, notwithstanding the word that came from Washington that this is no time for a man to build a home? If an industry is put out of business, how is the Secretary of the Treasury to get sixteen or more billions of dollars every year for carrying on the war?

A speaker at a recent convention in the East suggested a thought that might be considered at Washington, that while every man in America is for winning the war, if business is pulled up tight in the meantime, commercial progress in America will certainly go backward. Of course, if the time comes when it is necessary for all to turn in and join the army or other organizations backing the army, there is no one that I know of that would not be glad to do it, but we trust that government officials will utilize the means they have in hand rather than anticipating this condition and forcing a cessation of general business activities unless it is absolutely necessary.

The big labor problem is one that should be handled with the closest co-operation by all manufacturers, no matter in what section they are located, so as to make sure that the lumber trade goes on record unanimously against the eight-hour day, although it is, of course, essential at this time to meet any conditions necessary to assure the government getting everything it wants in wood, and getting it now. But, provision should be made so that as soon as the war is over, this matter will be straightened out on a basis that is fair to employe and employer. Certainly an eight-hour day is not the kind of a day needed in the lumber business. If the lumbermen are not paying wages enough they should correct any evils in the trade at this time and not wait until labor gets a hold and then have to meet with their requests or get into a several years' fight.

The program for this annual meeting, however, will be best carried out if a stronger organization is effected and more people come forward to do their part in working out the policy of our industry. It does look like there are a lot of folks manufacturing lumber and retailing it that cannot see over their back fences; they are not willing to learn co-operation, and always let a few leaders carry the load. This means that success cannot attend the leaders' efforts, no matter how good the plans are, or how much benefit would come from the better organization.

The big National ought to be capitalized. It has been in a way, but it has been paradoxical for several years that the most important association in the trade has had practically no capital and its officers had to finance it from time to time in order to keep it afloat. Of course this is largely due to the fact that it is a delegate body, and the individual associations are not so prosperous themselves that they can keep a good balance in the National's treasury. Of course, nobody is fearful about selling the National his services, or anything else it wants to buy, because any one of the delegates in this association could pay the annual cost and not feel it seriously,

but there are a lot of organizations in the trade who in the past have not been capitalized, and their officers and directors have been handicapped in carrying out the broad programs because of this fact. However, every one of the organizations this year has had an interesting and profitable program and growing membership, and each in turn showed a good balance in the treasury, and in many cases underwriting syndicates back up any efforts put forward, so it would seem that the National's policies no matter how great they seem will be properly capitalized, and the program will insure this.

Reminiscences

When an office boy in the old Timberman office, one of our regular visitors was the then king of the walnut business, John H. Lesh, with headquarters at Goshen, Ind., operating all over the state of Indiana, as well as Iowa, Indian Territory, Arkansas and adjacent states, and utilizing St. Louis, East Chicago, Ind., and Cincinnati as central points. Mr. Lesh was a very active business man. He thought walnut was the only wood, and the production of his mills every year was then a miracle to most folks. Like many fore-casters in the trade, they had walnut out of the market twenty years ago, but John H. Lesh could always find trees, and he had the faculty of gathering about him practical, aggressive business men, two of whom later became his partners and his successors.

What I have in mind about these men concerns the days when they were buying walnut in Indiana. John N. Penrod, now of Kansas City, was buying logs south of Goshen, and E. P. Abbott was looking after the territory north of that point, and each came home to Goshen on Saturday night for a conference with the little big boss. But for a year or two neither Mr. Penrod nor Mr. Abbott could understand why he could not top the other in purchases or shipments. Mr. Lesh would say: "John, you did fine this week, but that young fellow Abbott up there just beat you out 20,000 feet." Next week Abbott would come in and Mr. Lesh would say: "Well, Frank, believe me, that fellow Penrod is some active fellow; he just beat you out some 19,000 feet. He is certainly a hustler and his purchases seem to be growing each week." It was a long time after that that Abbott and Penrod got together. When they were introduced Mr. Penrod said: "Abbott, so you are the fellow that can buy more walnut in a week than I can," and Abbott responded, "Well, John Penrod, I have been waiting to know you for a long time. I want to get acquainted with any fellow that can beat me buying walnut." Of course both had a good laugh, and Boss Lesh in his own inimitable way made a happy event of the meeting by giving a dinner that was worth while. The younger men afterwards became partners in the firm of Lesh, Penrod and Abbott. Both Lesh and Abbott have since passed away, and Mr. Penrod is now one of the largest factors in the walnut business.

Col. Lesh certainly knew how to get the best out of his men, and made real business men out of them, and he did it as gracefully as though that were his principal job on earth. He also had the ingenuity to operate a big business in a section where the walnut trees were more difficult to find every year.

Speaking of Mr. Penrod, I was reminded of a yarn he tells on himself. He has probably been the largest shipper of walnut to Germany the past twenty years. In discussing the government needs for gun stocks with a Frenchman he remarked: "I wonder where the Germans are getting all the walnut for gun stocks," and the Frenchman said: "John, you ought to know, you have been furnishing seventy-five per cent of their walnut for twenty years." That was just one of the little items of the German propaganda to win the war. They never overlooked a point except diplomacy.

Uncle Sam and the Lumber Trade

Everybody sympathizes with the government campaign of buying on a cost basis plus a suitable profit to the manufacturers. The trade commission should be co-operated with to determine what these costs are, and no lumberman has shown any desire to get more than a reasonable price for his goods, but we feel it is only right and just that the lumber people themselves, through their associations, should determine what a fair cost is for the material, and that the material should be used for the government and not for some branch of industry that thought it could buy lumber for

less than it was worth, expecting to get a profit out of the lumberman rather than legitimately through their own contract for whatever they were selling the government. Now there seems to be a whispering in Washington that the several hundred thousand cars that the government will probably have to buy to properly equip the railroads to carry the two hundred per cent annual shipments should be bought on the same kind of a basis. The railroad presidents have inaugurated a program which states that one difficulty that prevents them from delivering the goods was that the government's needs for munitions and supplies amounts to as much as the annual shipments of the country itself. Why should lumbermen furnish a dividend for the stockholders of the railroads out of their pocket? If there is an agreement that the railroads are going to be turned back to the stockholders, and the legislation now in process seems to indicate that that will be done, it is not fair for the government to buy the lumber in that way. If, however, our leaders at Washington expect to keep the railroads I have nothing to say against the lumber manufacturers furnishing this car material at a cost plus a reasonable profit, say twenty per cent, which is only a fair profit in any manufacturing industry.

Some of the dollar-a-year men, or some other wise patriot, or one who thinks he is, has been advocating lately that the lumbermen must furnish to the retailer lumber on a government basis. There are always a lot of fellows in the world who are willing to give away somebody else's property. They are generally made up of men who have made a competence, or some jack-leg lawyer politician who would confiscate anybody's property if you weren't looking at them, and they do not get any less so when they got the excuse to say it is only patriotic. We have the illustration of the efforts of the wagon people to profit at the expense of the lumber fellows. Let us not have any others. There should be enough intelligent lumbermen at Washington to convince the powers that be that what is fair is fair, but we do not propose to be robbed for the benefit of somebody else.

Please do not think there is any lack of patriotism in these statements. There is not. The lumber trade will pay as much money in excess profit taxes as practically any industry except possibly steel, which has been making the excess on a basis of 200 per cent advance, rather than a basis of 20 per cent to less than 80 per cent advance as in the lumber trade.

How About Inch Stock?

A lumberman with more than a normal stock of inch oak, both plain and quartered, is wondering what the future of that thickness will be. Most everybody has been cutting largely two-inch and up; in fact, as much as they could get, and only a few operators have been satisfied to cut their stock to fit the new demand.

There must be some specialties that thin oak can be used for. Of course the building trade is somewhat in the grumpy state, but I presume it will be as usual soon, and then there will be a feast and then a famine on one-inch oak. In that connection I am reminded that some of our friends making oak flooring planks will find an awfully short demand. They must get some specialty in the plant to keep the wheels going. It might be a good idea to turn part of the plant into a dimension or other specialty lines and fill the hole now, and after the war is over it will make the factory a little more independent of the consumer than times past.

Attend National Chamber of Commerce

The business men of Chicago and the West should take advantage of a great opportunity which most of them have not enjoyed before, to attend the meeting of the Chamber of Commerce of the United States, which will be held at the Congress hotel, Chicago, April 10, 11 and 12. Every delegate I have ever seen selected in our line of trade to attend the meeting, after one convention they are all anxious to come again. In fact for the first time in the history of the country the business interests have been very well represented at Washington by the National Chamber. A program of speeches on the important subjects of the day, like financing the war, railroads, shipping, etc., will be handled very intelligently, and any business man who is not a member either through his association or individually, should be.

Production Further Restricted

By Shipping Difficulties. Seventy Million Feet of Logs and Ten Thousand Cars of Lumber Held Up.

There has been little, if any, improvement in the log handling situation around Memphis so far as flat cars are concerned. A delegate from the Southern Hardwood Traffic Association made a trip to Atlanta recently for a conference with C. H. Markham, regional director for the southeast, with a view to securing more flat cars for log handling as well as increased facilities for shipping lumber. J. F. Porterfield, general superintendent of transportation for the Illinois Central system, has spent some time in Memphis since this conference, and has promised to furnish one hundred and fifty more cars for the Yazoo & Mississippi Valley line of the Illinois Central system. These cars, however, have not yet been placed in service, and it is doubtful if they will be so placed in the immediate future.

In the meantime the amount of lumber being produced in Memphis and the valley territory is sharply below normal. It is estimated there are sixty to seventy million feet of timber ready for loading, but the number of cars available are very greatly restricting the movement of these logs to the mills.

J. W. Dickson, president of the Valley Log Loading Company, challenges the statement that there are 540 cars in operation on the Yazoo & Mississippi Valley for log loading. He believes that every car in the service is available for use at least three times each month, and points out that the amount being loaded each month is far short of the sixteen hundred cars which would be loaded under those terms. This company is having considerable difficulty in keeping its three log loading machines in operation because of the shortage of cars. On the other hand it has announced that it is perfectly willing to put on additional equipment provided cars are furnished. Mr. Dickson said recently that it was doubtful if the loading for March would show an excess of 100 cars over the short month of February. He explained that this is positive proof that the situation is failing to show any improvement of consequence.

The movement of lumber into the Central Freight Association and Eastern Trunk Line territory is even more restricted now than heretofore, and vast quantities of lumber are tied up in Memphis and the valley awaiting an open route for delivery. J. B. Larson, who is in charge of embargoes for the Southern Hardwood Association, estimates that there are fully ten thousand cars of hardwood lumber tied up because of this restriction. The Louisville & Nashville Railroad, which has heretofore been accepting shipments into Central Freight Association territory from all southern points, will not accept shipments from Memphis unless they originate at this point. It will not accept shipments from connecting lines unless these lines are north of Memphis and south of the Ohio. The main open route for handling lumber shipments into Central Freight Association territory heretofore has been over the Louisville & Nashville. The Frisco, Missouri Pacific and Rock Island systems have begun accepting shipments for delivery as far east as the Indiana-Illinois state line, but they will not accept shipments any further east. The Illinois Central is handling lumber to all points on its lines as far north as Chicago. It is possible to effect deliveries to St. Louis, Cairo, Peoria and Chicago, and all points in Western Trunk Line territory are open. However, the greater portion of the hardwood lumber is shipped from Memphis and valley territory into Central Freight Association and Eastern Trunk line territory which accounts for the very large tie-up to which reference has already been made.

Mills depending on the public carriers for their log supplies are running in quite a restricted manner. There is full production, however, on the part of those mills which control their own logging and railway equipment, and which bring in their logs by water. Weather conditions have been extremely favorable for the past two weeks, and an abundant supply of logs has been available

for the last two classes of mills mentioned.

Conditions have also been quite favorable for cutting and hauling logs and this is making good progress. Labor is becoming scarcer every day, and conditions in this respect will, it is anticipated, become even more intense as work on the farms progresses.

Will Probably Revise Chamberlain Bill

Lumbermen have been busily fighting the bill of Senator Chamberlain of Oregon authorizing the president to commandeer timber and its products. The bill was reported from the senate committee on military affairs in drastic form, giving the president power also to conduct logging and milling operations. Lumbermen objected to this last provision in particular. They succeeded in having the bill referred back to the committee.

Then they had a hearing to voice their protest to the committee. The principal speaker was Representative Fordney of Michigan, who has been in the lumber business almost all his life. He denounced the bill and declared that its purpose was to enable the president to establish an eight-hour day in the southern and eastern lumber industry, as he has in the west coast industry, under military discipline.

Since that hearing the senate military committee reconsidered the bill and amended it so as to strike out the objectionable grant of power to direct and prescribe the conduct of logging and milling operations. The bill gives the president power to take standing timber needed for the army, navy and shipping board, to enter any lands and take timber, to erect mills, etc., that may be necessary for such operations, construct logging roads and railroads for the purpose; to take possession of cut logs and manufactured timber and lumber, machinery, cables, etc., to designate an agent to exercise his power; to fix a value on materials and take them by paying 75 per cent of the value leaving the owners to go to the court of claims for the balance if they do not like the official value; to issue and enforce orders prescribing the length of logs and the dimensions of lumber. Penalty of \$1,000 fine or one year's imprisonment is provided for violation of the law. Passage of the bill is now expected. Its present form is fairly satisfactory to lumbermen.

Income Tax Notes

The Internal Revenue bureau announces that it has been brought to its attention that several trade organizations have issued to their members bulletins erroneously advising them that increment or appreciation in property values, as ascertained by an appraisal, may be treated as earned surplus or undivided profits and included in invested capital for the purpose of the excess profits tax.

The excess profits tax law expressly places the computation of invested capital upon the basis of the cash and other property actually put into the business and not upon that of a present valuation or appraisal of its assets. Regulation 41 relative to the excess profits tax point out in detail just how invested capital should be computed.

The following statement on the subject was issued by the bureau:

While the bureau is grateful for the assistance which has been rendered by trade organizations in the administration of the present war taxes and entertains no doubt that these particular bulletins were issued in good faith, yet it cannot be too emphatically stated that they are based upon a misapprehension of the express provisions of the law and of the regulations issued thereunder, and that if not corrected they will result in great inconvenience both to the government and the taxpayer. Returns in which the invested capital includes surplus or undivided profits computed upon present values as determined by an appraisal cannot be accepted. It is to the interest of both the government and the taxpayer that this fact be given the widest publicity in view of the misapprehension which may have been caused by unofficial statements to the contrary.

Local Hardwood Industries

Editor's Note

It will be a long time before the present hardwood regions of the United States cease to supply hardwoods. Districts may be closely lumbered, but nearly always there are trees left to meet the district's local needs, and new growth of hardwoods come on in a few years. Following is an account of the local manufacture and use of hardwood products in a region where lumbering has been going on for 140 years. The needs of the people are still supplied, with no apparent danger of depleting the sources of the raw material.

The hardwood factory that works on a large scale and reaches the whole country or the whole world with its output is well known, and its field of operations is understood by the public. But there is a place in this country for concerns which are much smaller. There is a local demand for hardwood products which cannot readily be filled by distant factories; the problem of distribution is too complicated and expensive. This provides the opportunity for the local shop which is in direct contact with the people in its vicinity. Such a shop is necessarily small, and its patronage comes from the immediate neighborhood; but within that restricted field it fills an important place and provides the community with such hardwood commodities as are needed. Shops of that kind are found in all parts of the hardwood region, and though each one is small, they amount to a great deal in the aggregate, and consume much material in supplying the wants of their customers.

No reliable estimate can be made of the total consumption annually of hardwoods by these local shops, scattered from Maine to Texas and from Minnesota to Florida. There are no statistics. The census taker who compiles figures on wood uses, never finds them, or he thinks them too small to be worth bothering with. Yet, if all such shops were listed and their output enumerated, the aggregate would run into millions of feet, and the product would be found in the homes of the people in the form of nearly every conceivable article that can be made of hardwood.

A TYPICAL EXAMPLE

During a recent journey of a representative of **HARDWOOD RECORD** among the ranges of the Alleghany Mountains in West Virginia he selected a typical hardwood shop of the kind referred to. It was small and its patrons were the neighbors who lived ten or fifteen miles around. The shop made handles for axes, hammers, and other tools; rustic chairs for porches and kitchens; mauls with which woodsmen split their cordwood and fence rails; cant-hook handles for lumbermen; spinning wheels for the rural housewife who still follows the thrifty habits of her mother and grandmother; baskets for the barn and country store; flails for threshing the buckwheat; baseball bats for the local teams, and other articles so numerous that a complete list would look like an inventory of Dickens' "Old Curiosity Shop."

The sign over the door of this village factory was "D. J. Nestor & Son, Manufacturers." The senior member of the firm and his son, the junior member, never have any strikes or labor disputes, for they do all the work themselves, except that they occasionally hire a farmer to bring in a load of logs. The proprietors have lived there all their lives. They are wood experts. They do not claim to know much about botany, dendrology, microscopy and wood technology, but they know good hickory, tough ash and excellent maple when they see them, and the inspection in their shop is as rigid as in Henry Ford's. They know the soil and the situation that produce the best wood, and they begin their inspection by selecting the trees in forest before they are cut down.

THE TOWN AND ITS PEOPLE

The shop is located in the village of St. George, in the northern part of West Virginia. The town has two factories, a harness shop employing one or two men, and the hardwood shop. The town had a sawmill 140 years ago, the irons for which were carried over the mountains on pack horses by a Pennsylvania German whose neglected grave is concealed in an elder thicket in the center of the village. Fifty years ago there was a "shook shop" where barrels were made for the Cuba sugar trade. The finest white oak that

ever grew was worked in that shop, and the man who worked it is still living, old and gray-headed—Joseph Davis. Forty years ago contractors skinned the country for walnut, and thirty years ago they made St. George a buying center for hickory.

These have been about the only industries the village has ever known, except that it was the county seat a long time, and the empty court house is falling to ruin since the seat of justice went to a newer town. Yes, and the village was long a center and a market for ginseng, dug by the mountaineers for twenty miles around. Enough has been bought there to provide incense for all the idols in China; but the ginseng days are about over in that part of the country.

The village with its forty or fifty families rests in peace between the hills and the river. Most of the houses have had no paint since the county seat was moved away twenty years ago, and the wooden sidewalks are mostly gone; yet it is a village of happy, contented people. Every house has a garden of an acre or so, land as rich as the Delta of the Nile; and the people almost make their living in the gardens, supplemented by flocks of chickens. The inhabitants are supremely satisfied in this quiet, peaceful hamlet, "where the wicked cease from troubling and the weary are at rest." The town has no railroad, no stage line, no newspaper, no movies, one store, one preacher and one doctor. The doctor, who has cured the people's physical ills for thirty-five years, is also a member of the board of education, county commissioner and general adviser on all social questions. He informed the writer that so healthful is the climate and so healthy the people, that if a doctor depended on practice alone for a living he would starve to death every year. He gave it as his opinion that the cash monthly expenditures of the people of the village do not average fifteen dollars a family. The vegetable gardens and the poultry yards furnish the rest.

GETTING THE VIEWPOINT

This somewhat detailed account of the village of St. George will serve to give a viewpoint of the conditions under which the little hardwood shop has been successfully conducted. The market is at the door and a few miles in the country on all sides. Every household has an ax, hatchet, hammer, hoe, shovel, rake, and chairs, and all renewals of handles or other parts, with few exceptions, come from the little village factory where two men find steady employment.

The representative of **HARDWOOD RECORD** spent an interesting and profitable hour in the shop. The demand keeps pace with production, and stock is sold about as fast as it is finished. The market is mostly local, but the manager stated with evident pride that he had just made a shipment of chairs to Illinois to one of his former customers who had "gone West." He related with equal pride that he had a repeat order from the Babcock Lumber Company for cant-hook handles. The village harness maker who happened to be by, and not wishing to be outclassed in a trade way, volunteered: "Yes, and I sold twelve sets of harness in one order to the Kendall Lumber Company." So these small village shops have some trade beyond their immediate neighborhood.

CHAIRS AND HANDLES

The principal articles made are chairs and handles. The former make no pretense of competing with the factory-made chairs on the general market. They are very strong, but not highly finished. No paint or varnish is seen on them and no glue is used in their construction. They are left in the natural color of the wood, a condi-

Figured Gum Passes Final Test

THE O. K. Houck Piano Company has met with great success in the FIGURED GUM piano it has had on exhibition for some time.

Several other houses are now making sample cases in FIGURED RED GUM. The Edison phonographs are now shown in this wood. Its use in many other internationally known products has brought public recognition.

The trade would buy YOUR product in FIGURED RED GUM.

We are able to help greatly in your choice of material for sample lines as we are the largest producers; as we keep on hand a stock of logs for filling exceptional orders; as our warehouse contains one million feet of FIGURED RED GUM, sawed and sliced, in all thicknesses.

Our standing as the leading producer bears testimony to the correctness of our methods and equipment, and of the quality of our timber

How the Salesman Can Use His Time

Men Who Have Little Stock to Offer Can Study Mill End to Advantage

A GOOD MANY MANUFACTURERS of veneers especially the larger concerns, are in the position at present of having nothing to sell. They have large orders on their books, orders that will take all of their production for some time to come, and hence are not aggressive in seeking new business.

They have sales and promotion organizations, however, which are usually employed to good advantage in calling on customers, working up new accounts and taking care of old ones. These men, as a general rule, are not being sent out into their territories to call on the veneer buyers, for the reason that they are not in a position to solicit business, and about all they would be able to do would be to make excuses regarding possible non-delivery of the material that the buyers had ordered some months ago.

And of course no salesman wants to spend his time doing that. Making excuses is not a graceful occupation, nor a pleasant one, and in most cases the salesman is not a success at it. He would rather go out and solicit the toughest prospects on his list than call on his regular customers with nothing to hand out but explanations of why the business that they gave him has not been taken care of more rapidly. And even such convincing statements as those based on heatless days, embargoes, car shortages, labor shortages and the other troubles that manufacturers have had to contend with are not always effective in smoothing the corrugated brow of the customer who wants what he wants when he wants it.

The veneer manufacturer, on the other hand, knows that good salesmen don't grow on trees. He probably has spent several years in getting together the organization that he now has, which is capable of going out and getting the business in the face of keen competition, and when everybody else has men on the road soliciting the trade of the consumers. Hence, the producer of the raw materials, even though he is not anxious to add any more orders to his present list, does not feel like dispensing with the services of his salesmen.

Of course, there are sentimental considerations involved, but looking at it purely from a business standpoint, and on the basis of dollars and cents, the manufacturer is justified in holding on to the men who have demonstrated in years gone by that they can supply him with the business that is needed to keep his mill going at the proper rate. These salesmen are an investment, just as a plant is an investment, and there is little more excuse for getting rid of a good salesman, simply because business is so good that his services aren't needed, than there would be for junking a machine which was not needed because the volume of business happened to be a little lighter than usual.

The question, then, is not whether the veneer man is to continue to keep his salesmen on the pay-roll, but how he is to use their services to the best advantage. What can the salesmen do at this time that will react favorably on the business, and will prove to be an advantage later on, when the usual scramble for business is in evidence? How can he spend his time so that when he goes out on the road later, in a search for orders, he will be a better salesman and a better representative of his house than he ever was before?

Letting the salesman have a vacation is hardly the ideal proposition, from the standpoint of the man or the house. Such a course would mean that the employe would lose his pep, and would fail to benefit directly or indirectly, at least after the first few weeks. Missionary work among customers might be undertaken, were it not for the conditions referred to above—that most buyers at this time are kicking regarding non-delivery, due to conditions over which the manufacturer has not had complete control; hence the salesman can do little just now in that direction, because he is not in a position to assure the customer that the railroads are going to be able to handle to handle traffic any more expeditiously from now on than they have been doing.

The plan which has been adopted by some of the big veneer concerns, and one that appeals from the standpoint of common sense and ultimate results, is sending the salesmen to the mill. They have come to the conclusion that the best way the man to whom is put up the sales problems of the concern can spend his time during the present situation is by getting in touch with production, studying mill operations, and finding out all he can about the actual operation of the plant which he represents in his dealings with the customer.

Consequently, their salesmen are now at the plants, and are learning a lot of things about veneer manufacturing. They are becoming more familiar with the logging end of the business, and with the selection of timber suitable for veneer production. They are finding out all about the actual cutting of the veneers, whether on a rotary machine, a slicer or a saw. They are studying the drying processes, and studying them, too, from the standpoint of the man who has to "sell" a particular drying process to his customers. The more he knows about how this work is handled, the better able he will be to explain its details and its advantages to the man who is buying the veneers.

He is finding out about the warehousing facilities of the mill, and about the methods used in handling the stock through the plant and into the railroad cars. He is learning all about packing methods, and the care with which the veneers are prepared for shipment, so that they

will stand the trip between the mill and the factory of the consumer in the best possible shape. In fact, regardless of what he has known heretofore about veneer manufacturing, he is coming closer to that ideal of a salesman, a real expert regarding the production of the goods that he is selling.

It must be admitted that during the ordinary course of business, when the chief duty of the salesman is to get orders, he has comparatively few opportunities to take trips to the mill and to obtain information of this technical character. True, he knows in a general way how veneers are made, and perhaps certain processes have been elaborated upon by his principals, as features which are to be stressed in his selling talks. But even though this has been done, he can not have the vivid, definite knowledge of how his stock is made and handled and shipped until he has been at the mill and seen it done, and studied the details of the organization and methods that are applied in getting the ultimate result of a piece of veneer 100 per cent good.

True, a great many concerns, not only in the veneer business but in the lumber trade, have had occasional visits of their men arranged for just this purpose—that they shall have knowledge of the inside of the business which they are representing on the outside. Sometimes a few days spent in this work, and sometimes a week or more; but while this is excellent training as far as it goes, it does not as a rule go far enough. Salesmen in some branches of the steel business are given regular courses in the technical side of their trade, and stand examinations to make sure that they know all of the details of it. This is carrying the idea a bit far, but it suggests what emphasis is sometimes laid on the matter of salesmen, who are in a very special sense representatives of their companies to the trade and the public, having sufficient knowledge to represent them properly.

Another way in which the salesmen who go to the mills are able to work to advantage, and one which produces immediate results from the standpoint of the house, is assisting in the inspection and loading of orders which they themselves have handled. They are familiar with the needs of the customer, they know what his business requires, and they are able to load the cars in such a way that the chance of a mistake being made is reduced to the minimum.

Sometimes shipments are made in such a way that the letter of the specifications is adhered to, and yet the customer does not get what he wants. The customer is disgruntled, the salesman is disgusted, and no one in particular is at fault. After the salesman has had an opportunity to talk to those in charge of the shipping department at the mill and explain the likes and dislikes of the concerns to which he is selling the product of the plant, the business is sure to move forward more smoothly, and both the house and the customer will be benefited. There will be fewer complaints, fewer cases of rejected stock, and life will be happier for everybody concerned.

This is certainly a line of work for which the salesman is especially well qualified, and which, as suggested, brings an immediate return to the manufacturer. On the other hand, the salesman who becomes familiar with the production of the stock, and who learns the problems that the superintendent of the mill has to contend with in its manufacture, is likely to sympathize with him to a greater extent than formerly, and hence to tone down some of the specifications that "smart" buyers are in the habit of writing into their orders. He can point out the practical difficulties in the way of fulfilling the desires of the customer and suggest that some concessions be made along this line.

The salesman who gets business under the right conditions, because he has been able to show the customer why his demands in certain directions are unreasonable, is a better salesman than the man who takes the order, though at the right price, on such a basis that it is difficult to fill it, and certainly more expensive to produce the stock. In this way the experience acquired at the mill by the man on the road is going to make him more conservative. He will want to work more closely with the men in the production department, and not assume that, no matter what the demands of the customer are, they are to be taken care of without unreasonable trouble.

Looking at it from all standpoints, it appears that the manufacturer of veneers who has his salesmen spend their time at the mill, taking what might be called an extension course in veneer production, is using their services to the best possible advantage. He gets some immediate benefits and he is assured that later on, when competition tightens up, and everybody is hustling for orders, big and little alike, the men who are representing him will be qualified to do business more effectively and more successfully than they have ever been able to do before.

G. D. C., Jr.

Shipments of Kauri Gum

During the year 1917 the quantity of kauri gum shipped from New Zealand to the United States totaled 7,359,709 pounds. The shipments in 1916 were 8,516,935 pounds. This gum is used in the manufacture of varnish and the decline in quantity was not due to decrease of demand or the lessening supply. This gum is a vegetable resin, derived from the kauri pine; but the commercial supply is not derived from trees now in existence, but from fossil deposits buried in the ground where forests once grew, but have now wholly passed away. The gum is mined by removing the soil and separating the gum from it. The resin is in hard lumps of various sizes and has a market value of ten or fifteen cents a pound. Before the war most of the mining was done by Austrians, but they no longer are doing the work, and the shortness of the labor supply at the diggings is responsible for the falling off in the shipments to this country.

Those cheap woods we used to turn to for backs and fillers in the veneer trade are not cheap any longer. Some may cost a little less than others but there ain't no sich animal as a cheap wood any more.

Australian Veneer Woods

Opportunities to Introduce Some of Them Into the United States

HEY have some very fine colored or figured woods in Australia and the people there are waking up to the fact that they ought to cut the woods in veneers in order to make them go farther. The settlers in Australia, following the example of the early settlers in the United States, used much of the finest woods for farm use and fuel, and took no account of the value. Later, railroad builders made ties of this excellent material and employed it for piers and bridges. But now, it is proposed to work these woods into furniture and house finish, and employ them to the best advantage by converting them into veneers.

Eucalyptus and blackwood are the finest of the woods proposed for veneers; but all species of eucalyptus are not in this class. There are more than 150 kinds of eucalyptus in Australia and Tasmania, but a small group of them known as "stringbarks," are peculiarly fitted for veneers. The figure and general appearance of these woods suggest satinwood. They are exceptionally heavy, and on that account have been objected to as regular lumber; but the matter of weight is less important when the wood is reduced to veneers, because it is employed in thin sheets glued upon cores of lighter wood, and the

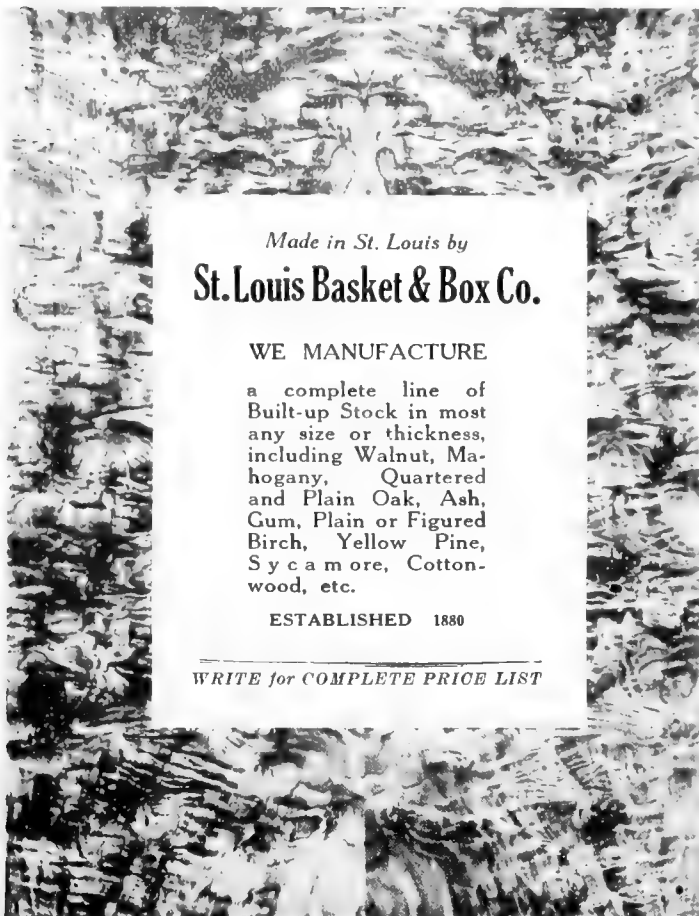

heaviness passes unnoticed. Handsome furniture has been made of it and the working of the veneer has proved satisfactory.

Another Australian wood which has been highly recommended for veneers is known as blackwood. The name suggests that this wood may resemble ebony in color, but the name is misleading in that respect. Instead of being black, its color is a rich brown with a well defined grain. It is related to the locust woods and is known to botanists as "Acacia melanoxylon." The tree has been planted for ornamental purposes in many tropical and semi-tropical countries, including the United States, but the main source of the wood for commercial purposes is Australia. It should not be confused with the West African blackwood, though the two are related botanically, both being pod bearers; nor is it the same as the blackwood of southern India, nor as the ebony of southern Africa.

The Australian blackwood takes a high polish. All of it is not figured, but much of it is, and the well known patterns "mottled" and "fiddleback" belong to this wood and are the kinds most sought after.

The fiddleback figure suggests curly maple in pattern.

WRITE for COMPLETE PRICE LIST

but not in color. Its color more closely resembles light mahogany. A handsome effect in paneling is obtained by using the figured wood in combination with plain. It has been employed as interior finish in some of the office buildings in Melbourne. Extreme richness characterizes the wood.

The use of this fine material in the United States has been almost negligible in the past, but steps have been taken to exhibit it to those who care to become better acquainted with it. To that end, the Bureau of Foreign and Domestic Commerce at Washington has secured samples for use of persons who wish to examine them. Samples may be examined also in the bureau's district and co-operative offices in the following cities: New York, Boston, Chicago, St. Louis, New Orleans, San Francisco, Seattle, Cleveland, Cincinnati, Los Angeles, Philadelphia, Portland, Oregon and Dayton, Ohio.

The veneer manufacturer can find other interesting woods in Australia, some of which are fairly well known in this country, others are not. Among these is the so-called Australian mahogany, which is not a true mahogany but is a member of the numerous eucalyptus family (*Eucalyptus marginata*). It is often called Jarrah, and it has the appearance in color and grain of Honduras mahogany. It is of medium weight, is easy to work, and has a fresh color. It is not unknown in the United States, but no account can be found that any of it has been made into veneer.

The list of woods which are apparently suitable for veneers is long if all the forests of Australia are to be drawn upon. Red cedar (*Cedrela australis*) is a handsome wood. It works up well and is very durable, being used for cabinet making, paneling, and interior fittings generally. Rosewood (*Dysoxylon fraserianum*) has a beautiful grain and texture, more resembling mahogany than the rosewood generally known to the trade. Silk oak (*Crevillea robusta* and *Orites excelsa*) makes handsome furniture and wainscoting. Tulip wood (*Harpulia pendula*) is in great demand for cabinet work, door panels, etc.

An attempt has been made to introduce blackwood into the American market, but the logs sent for treatment were all sawed in the wrong way, with the result that the beautiful "fiddleback" effect was entirely destroyed. The logs should be quarter-sawed to bring out this grain. Properly introduced into the United States, the Australian hardwoods should become popular for piano cases, paneling, talking-machine cabinets, tables, picture frames, and all kinds of high-class furniture.

J. A. Graf Takes Government Position

J. A. Graf, for fifteen years employed by the Singer Manufacturing Company of South Bend, Ind., and later by the Mississippi Veneer and Lumber Company and the Tennessee Lumber & Veneer Corporation, has taken a position as inspector for the Government of airplanes and airplane engines. He has had as much as 100,000,000 ft. of veneers on one inventory in one of his former positions and his experience with built up stock should make him a valuable man to the government.

VENEERS AND PANELS

WISCONSIN VENEER CO.
MANUFACTURERS
RHINELANDER, WIS.

Superior Veneer Work

Glue makers would like to know how and of what materials Egyptians manufactured the glue which they used 5,300 years ago in making the veneer panels forming part of the oldest bedsteads on earth, so far as known. The glue is holding yet and the veneer is in good condition. The wood of which the veneer is made appears to be ebony; at any rate, it is some hard, dark wood, glued upon a backing of cedar.

The bedstead is a curiosity and is an interesting relic of the past. It is one foot high, 26 inches wide, and 63 inches long. It was a frame to hold the sleeper's blankets off of the floor or ground; but it was too short for an adult, unless a dwarf, and it may have been intended for a child. It is known that the Egyptians provided furniture specially for children. It is believed, however, that the bed was of regulation size, for old literature refers to short beds with the sleepers' feet protruding over the footboard, which arrangement would be objectionable in a country where the nights were cold. However, the feet of the ancients, who went barefoot were not as sensitive to cold as are those of the moderns who wear shoes.

Be that as it may, the interesting thing about the old bedstead is the veneer panels which have withstood a hot climate during more than 5,000 years. The ancient piece of furniture is now in a museum at Cairo, Egypt. The bed had cords in place of springs or slats. The bed posts rested on lion's feet carved in wood, and they are a high class of carving, matching in workmanship the veneer panels. The old furniture makers of the Land of the Nile knew their trade well. It is remarkable that they were able to do such excellent work with the poor tools which they had; but, the class of work done often depends upon the skill of the workman than upon the character of his tools. At any rate, no one ever heard of an old Egyptian carpenter finding fault with his tools; for none but poor workmen do that.

Some Facts Regarding Pianos

The Industry Is an Important User of Raw Materials

 HE average piano contains 340 square feet of veneer, according to figures compiled for the government by George W. Pound, counsel for and general manager of the Musical Industries Chamber of Commerce of the United States. The figures were submitted at a hearing which was held for the purpose of determining whether the making of pianos is an essential or nonessential industry. In addition to the veneer, the production of a piano calls for 261 feet of lumber, divided as follows: Core stock, principally sawed wormy chestnut, 110 feet; back stock, mostly beech and elm, but with some maple and a small quantity of spruce, 120 feet; trim, which is oak, red gum, walnut, birch and mahogany, 10 feet; keys, basswood and pine, 10 feet; sounding board, spruce, 4 feet; action, maple, 7 feet. The veneers are of many woods, but walnut and mahogany predominate as the visible material. A gallon and a half of glue is needed in the manufacture of a piano, and also one and a half gallons of varnish.

The total output of pianos in the United States is placed at 300,000 a year. This means the consumption of 78,300,000 feet of lumber, and of 102,000,000 square feet of veneer. According to government figures the total

demand for wood in the manufacture of all kinds of musical instruments is 260,195,000 feet a year. This indicates that pianos take probably less than half of all the wood which is converted into musical instruments in this country.

Piano makers are usually men in the middle life who have worked many years in the factories and have specialized in certain parts of the work; but, of course, there are younger men who are working their way up to the best positions in the factories.

Mr. Pound in discussing the proposal to close the piano factories for the period of the war, opposed such a measure and explained that the musical instrument industry as such is not a largely profitable business as large businesses go. And it is not benefited by the war, but on the contrary is depressed. The element of profit is small, and therefore must have volume. There are some ten thousand of the larger retail piano merchants, many more smaller. Their entire capital is invested. They have no other line to turn to. The piano dealer is almost always an exclusive merchant, does not carry other lines of merchandise, cannot from the very nature and circumstances of the business.

Veneered Clothes Chests

The claim has been made that veneers have not been able to make any inroad upon the cedar clothes chest, and that it probably never can do so because the stock of which such chests are made is so knotty that if sliced in veneer the sheets would fall to pieces. The more knots in the stock the better it is liked, for the knots give the wood a figured appearance.

However, the veneered cedar chest is not unknown, but the general rule is reversed, and the veneer is employed as an inside lining instead of an outside covering, but chests of that kind don't seem to be very numerous for the probable reason that they are not in much demand.

The popularity of cedar for clothes chests is due to the fact, or the supposed fact, that the odor of the wood keeps moths and other insects away. Whatever odor the wood has comes from the surface, and a chest with a cedar veneer lining gives off as much odor as would be supplied by a chest made of solid cedar, and if the odor really repels insects, they would leave the contents of such a chest alone.

Cedar chests don't owe their popularity wholly to the odor of the wood, but largely to its beauty and novel appearance. The high color of the knots and heartwood and the whiteness of the sap form pleasing and attractive contrasts, and many users think of these oftener than of the moth-repelling qualities. Plenty of cedar that is free of knots can be had, and if there were a demand for veneer of this wood it could be produced, but the demand is not strong.

Several species of cedar are used by chest makers, among them being the southern red cedar, the incense cedar of California, and the Port Orford cedar of Oregon. Though these three species are called cedar, they are not as nearly related as their names would indicate; no two of them being of the same genus. Botanically, they are no more nearly related than white pine is related to hemlock. There are several cedars native to the Rocky Mountain region and westward that are closely akin to the southern red cedar, and no reason is apparent why their wood is not suitable for clothes chests. There is no question but that they are knotty enough to please those who like knots.

Opinions Have Changed

It was formerly a popular notion that anything that was veneered was cheap and dishonest. People thought the veneer was put on to conceal defects. That notion no longer exists among intelligent people, and the result is an enormous increase in the use and popularity of veneered articles, from boxes up to the finest furniture and interior house finish. Veneers are employed primarily for two purposes. First they make a stronger, better article; and second, they make it possible to economize in costly woods. A finely figured board one inch thick, used as a plank, is good for one panel; but if that same board is sliced into thirty sheets of veneer, every sheet will have an appearance as fine as the surface of the original board, and will furnish the outside, visible part of thirty panels. That is economy, and at the same time every panel is not only as beautiful as that made of a solid piece, but it is more serviceable, it will warp less in weather changes, shrink less in the heat, swell less in dampness, and hold its own fully as well in all ways.

Different opinions are held as to what constitutes "solid" furniture or finish. Some hold that the article should not be called solid if it contains any veneer. That opinion was formerly held by nearly all persons who had any opinions on the subject; but it is not so now. The other view is that an article is solid if it is all of one wood, even if of built-up veneers. Under that interpretation, a walnut table would be solid if it contained no wood except walnut, whether made of lumber or of veneer panels. Custom will finally decide this matter, and the tendency seems to be toward acceptance of the view that the term solid, when

solid if it contains any veneer. That opinion was formerly held applied to furniture or finish, does not mean that veneer is not present, but that the article is all of one wood.

Statistics showing the production of veneer by states or by regions are meager. Emphasis is laid on the kinds of wood used, the quantity of each, and the thickness of the product, whether sawed, sliced or rotary-cut; but figures have not usually been published in a way to show how much is produced in different states. Perhaps it is not important that this should be shown, but it would at least add interest to statistics. It is pretty certain that the South furnishes more than half of the country's veneer.

American Woods Strongest

Tests made by the United States Forest Products Laboratory and by the Canadian Forest Service to determine the strength of various woods indicate that wood from the United States is far superior to that of Canada, Norway, Russia or any of the Baltic countries, is revealed in a copy of the Journal of the Royal Institute of British Architects which has just been received at the Chicago office of the National Lumber Manufacturers' Association.

This journal reporting a recent meeting of two of the most important committees of the Royal Institute of Architects quotes John R. Walker, trade commissioner of the United States, as saying in an address to the British architects:

"Elaborate tests have been made by the United States Forest Products Laboratory, and by the Canadian Forest Service, to determine the strength of various woods, and these tests indicate that the Southern pines are from 33½ per cent to 50 per cent stronger than Canadian and Baltic yellow pine, red pine, and spruce, and that Oregon pine is 25 per cent stronger than these Northern woods. I have also seen the results of special tests made in this country for various purposes, which confirm the general comparisons above given. It, therefore, appears that while a 6 by 2 Southern pine joist dried and finished to 1½ by 5½ would contain 12½ per cent less cross section or cubic area than a 6 by 2 Baltic or Canadian red wood or white wood full-size joist, yet it would possess the equivalent strength of such a joist, and in fact something like 15 per cent more strength.

"The plan which I propose is that in your building plans of the future provision be made for the use of American woods in the American standard sizes as an alternative for the Baltic woods in their standard sizes."

A hearty vote of thanks to Mr. Walker for the careful and lucid manner in which he had put his information before the members of the Institute was proposed and carried unanimously.

To Investigate Airplane Lumber Waste

Stories of waste at the Curtiss Aeroplane Company's plant at Buffalo are to be investigated by government officials, who will also investigate the alleged delays to the airship program which are said to have occurred. It is claimed that immature inspectors have been employed, much to the disadvantage of the speeding-up plans evolved by the government. It is said that many carloads of spruce lumber have been rejected without sufficient cause at Buffalo, as well as in the state of Washington. The Curtiss company and other firms are said to have sold rejected lumber at losses of from 20 to 60 per cent. Mahogany, which is used for propellers, is said to have been accepted and passed and later rejected without due reason. The charges are that inspections have been improper, that production has been distressingly small, and that co-operation has not existed between Curtiss plant officers and government inspectors. Archer A. Landon, president of the Chamber of Commerce of Buffalo, who has been acting for the government as assistant to the chairman of the aircraft board, says that an inquiry will be gladly welcomed by the manufacturers and that public judgment should be withheld in the meantime.

New Form of Airplane Propeller

Experience continues to teach new things in air navigation. In England a new pattern for airplane propellers has been invented. It has concave transverse grooves cut across both faces, the grooves on the fore face, however, leading out before they reach the leading edge, and on the after face leading out in a similar way before they reach the trailing edge of the blade. The inventor claims that these grooves have the effects of increasing the rearward thrust of the air back of the propeller and of increasing the suction of the forward face; but their chief purpose is to reduce the slippages of air toward the ends of the blades, due to centrifugal force.

Building and Abandoning Railroads

During 1917 the railroads of the United States built 962 miles of new track and abandoned 942 miles of old track. The new mileage built was less than that built in any other year since the civil war, except 1915, when 933 miles were constructed. The high price obtainable for old scrap is one of the reasons for scrapping so much track at this time. If it is not paying as railroad it may pay as junk.

They Are Fighting For YOU

FELLOW Lumbermen from the United States and Canada are in the Trenches of France *now* doing their utmost to protect *you* and *yours*. Hundreds more are going. *It is up to you* to let them know you appreciate what they are doing.

They need tobacco and comforts, you can surely share with them what you are getting in abundance. Cheer them up and let them know the lumber industry is behind them by *subscribing today—now* to

The Lumberman's Soldier's Comforts Fund

In charge of the Concatenated Order of Hoo-Hoo. If you know of *any lumbermen* who have joined the ranks of the American or Canadian army or navy send their names and address to

E. D. TENNANT
1218 WRIGHT BLDG., ST. LOUIS

We want to get in touch with them.

FILL OUT AND MAIL TODAY

E. D. TENNANT, 1218 Wright Building, St. Louis, Mo.191.....

Dear Sir:

Enclosed find Check, Money Order or Currency for \$....., covering my subscription to the "Lumberman's Soldier's Comforts Fund."

Monthly subscriptions are solicited. If you prefer to subscribe a certain amount per month, fill in below.

I hereby agree to subscribe \$..... per month for one year from date, or for duration of war, payable on the first day of every month, commencing191.....

Address

Make Checks payable to E. D. Tennant, Treasurer.

All Three of Us Will Be Benefited if You Mention **HARDWOOD RECORD**

tion generally expressed by the term "in the white." The posts

are maple, either hard or soft; the rounds or dowels are of hickory. If there are rockers they may be of beech. The bottoms are woven of thin ribbons of hickory. The posts of the chairs are steamed, bent and placed in clamps, where they remain until they become rigidly set in the desired form. They never change shape afterwards.

The posts are steamed and made soft before the rounds are driven in. When thus softened the rounds, that are one-sixteenth of an inch larger in diameter than the holes which are to receive them, may be driven in without splitting the posts, and when the posts become dry they hold the rounds so tightly that it is next to impossible to withdraw them.

The Nestor shop uses a peculiar shaped round, which it claims as its own invention. The end of the round, where it is inserted in the post, is turned on the lathe in a way to leave an enlarged band or ring of wood, which locks the round in place when the shrinkage of the post occurs, and it never comes loose. It takes the place of the wedge which is sometimes inserted by other makers in the end of a round in such a way that it tightens as the round is driven in.

The chair bottom material consists of ribbons of hickory, six or eight feet long, split to a thickness of a sixteenth of an inch and about half an inch wide. The Nestor shop has devised a planing machine to dress both sides and both edges of these wood ribbons at a single operation. It is probably the smallest planing machine ever invented for woodworking. It weighs six or eight pounds and is operated by hand power. Hickory is by all odds the best wood for such chair bottoming material.

OTHER ARTICLES MANUFACTURED

The shop does a good business in wagon and buggy spokes with which to supply neighboring blacksmith shops where the vehicle repairing is done. Large spokes are of ash, the small of hickory.

An occasional wooden pulley is needed in the neighborhood, and these are made of black gum (*Nyssa sylvatica*), which may be had in any size needed on the surrounding hills.

Mauls have been mentioned. The shop makes these of the burls of rock or chestnut oak (*Quercus prinus*). A maul of a size to suit a post splitter sells for \$1.25, and a hand maul for fifty cents. Burls suitable for mauls are scarce, and one may hunt a long time without finding any. They are apt to occur on the trunks of chestnut oaks which grow on the sterile tops of mountains or on poor, stony land. The burl is sliced from the trunk with a saw. One in the shop was examined. The rings of growth indicated that it had grown nine inches in diameter in eleven years—that is, each ring was nearly half an inch broad, and it consisted almost wholly of dense "summer wood" (the wood that grows late in the season, and therefore hardest and toughest). The texture of the burl resembled horn more than wood. The man who buys such a maul for \$1.25 and wears it out busting rails will get his money's worth.

The same might be said of the ax handles that sell for twenty-five cents each. One such is worth a dozen of the kind frequently sold in stores and which snap when they receive the first severe twist. This shop uses nothing but rapid growth hickory for ax handles, and the wood must be white—so white that when polished it looks and feels more like ivory than wood. It is not possible to get hickory of that class in all parts of hickory's range. Soil and climate must be suitable.

The spinning wheels sell for \$3.50, and are made of oak, maple and black locust, with distaff of dogwood. Of late years the mail-order houses are selling wheels of that pattern, but they are factory made, and according to Mr. Nestor, are not worth half what his are worth, and for ease of running cannot be compared with his, which are hand-made.

Crosscut saw handles of hickory belong to the output. Single-trees of the same wood are sold to teamsters on the roads and in the lumber camps. Canthook handles are of hickory, both white and red, and they are turned green because the wood works more easily in that state. Buyers make no choice between the white sapwood

and red heartwood. Hammer and hatchet handles are made of hickory waste left over from the larger operations, and buggy poles and shafts of long, straight hickory stock.

The Nestor shop specializes on baseball bats made from spotted maple (*Acer pennsylvanicum*) which meets the approval of local teams, but has not had much demand away from home. This is quite a small tree and is usually ignored by lumbermen. It abounds in rich mountain coves six or seven miles from St. George.

Biltmore Forestry School Men Prominent in Service

The latest issue of the Biltmorean gotten out by the Alumni of the erstwhile Biltmore Forestry School, formerly maintained by Dr. C. A. Schenk at Biltmore, N. C., contains the list of former Biltmore men who are now in the National service. The notable thing about the list is the large percentage of men who hold commissions. This speaks very well of the character of men who attended Dr. Schenk's school and of the training they have received.

The list includes, according to present figures, the following:

Alexander, Ben.....	1st Lieut., Aviation Corps.
Armstrong, Carroll W.....	Quartermaster's Department.
Armstrong, Ralph H.....	Serjt., Expeditionary Force.
Atkinson, E. Stanley.....	2nd Lieut., Fort Grant, Panama.
Ballard, Edward H.....	Aviation Service.
Bentley, George A.....	Capt., Quartermaster's Department.
Berry, Swift.....	Forest Service.
Breen, Lott R.....	U. S. Inf., Camp Dix.
Bristol, Jay R.....	20th Engineers (Forestry).
Campbell, John W.....	2nd Lieut., Battery C, 330th F. A.
Carpenter, Herbert W.....	Vancouver Barracks, Washington.
Chadburn, H. N., Jr.....	American Ambulance Corps (Italy).
Colledge, Edw. W.....	1st Lieut., U. S. R. Engineers.
Crowell, Lincoln J.....	(Yale '09, Bilt. '11), 1st Lieut., 20th Engineers (Forestry).
Dorrance, J. Gordon.....	2nd Lieut., Co. B., U. S. R. Engineers.
Dubois, Coert.....	Major, 10th Engineers (Forestry).
Dunbar, Roger.....	20th Engineers (Forestry).
Dunning, Carroll W.....	Capt., Quartermaster's Department, Greenville, S. C.
Dunning, Earle.....	Quartermaster's Department.
Dunston, Clarence R.....	1st Lieut., U. S. Indian Service.
Crockett, Kirk.....	Co. E, 102nd U. S. Inf. (France).
Egnor, James W.....	MacCormack State Park, Indiana.
Estill, Davis H.....	Capt., 80th Div. Depot Brig., Camp Lee, Va.
Emerson, Fred D.....	181st Aero Squadron, Kelly Field No. 2, So. San Antonio, Tex.
Eldredge, Inman F.....	Capt., 10th Engineers (Forestry).
Euchnerf, William H.....	2nd Lieut., Aero Squadron, Kelly Field No. 1, So. San Antonio, Tex.
Fullenwider, W. G.....	Corp., Co. B, 10th Engineers (Forestry).
Gfarrhart, Paul C.....	1st Lieut., 316th F. A.
Gile, Richard D.....	2nd Lieut., 10th U. S. Cav.
Given, J. B.....	1st Lieut., 316th F. A.
Gooding, Guy K.....	Serjt., Co. 10, Wisconsin State Guard.
Hall, Stanley B.....	Capt., 301st Amm. Tr., Camp Devins, Mass.
Hammond, Charles P.....	20th Engineers (Forestry).
Heath, Frank.....	Capt., 361st Inf., Camp Lewis, Wash.
Hutchinson, Newbold.....	2nd Lieut., M. C. Training Camp, Camp Joseph E. Johnston, Fla.
Johnson, Ansel R. H.....	Naval Aviation Section.
Kilmer, William F.....	Co. B, Signal Corps, Camp Sheridan, Ala.
Lafon, John.....	Capt., 10th Engineers (Forestry).
Littlefield, Theron R.....	Corp., Headquarters Company, 340th F. A., Camp Funston, Kansas.
Lockwood, Milton K.....	1st Lieut., School of Military Aeronautics, Austin, Tex.
Marston, Charles O.....	10th Engineers (Forestry).
Mershon, W. B., Jr.....	Serjt., Co. C, 10th Engineers (Forestry).
Merrill, James D.....	2nd Lieut., 342nd Inf., Camp Grant, Ill.
Modisette, W. M.....	Capt., 8th U. S. Cav., Alcatraz Island, San Francisco, Cal.
Moore, Louis R.....	Serjt., 10th Canadian Engineers (Forestry).
Morse, Harrison H.....	Co. 9, 161st Depot Brig., Camp Grant, Ill.
Myers, Reynolds V.....	Serjt., Co. C, 10th Engineers (Forestry).
Narramore, David C.....	Lieut., 10th Engineers (Forestry).
Oakleaf, Howard B.....	Capt., Signal Corps, Reserve.
Orr, Ronald H.....	20th Engineers (Forestry).
Otis, David B.....	2nd Lieut., 308th Machine Gun Company, Camp Dix.
Partridge, Herbert E.....	Troop C, 1st Mass. Cav.
Ross, Robert M.....	20th Engineers (Forestry).
Schulze, G. A.....	School of Military Aeronautics, Atlanta, Ga.
Silverthorn, R.....	Co. 10, Wisconsin State Guard.
Stutz, Jerome B.....	10th Engineers (Forestry).
Shawhan, H. W.....	1st Lieut., Fort Caswell, Cape Fear, N. C.
Sullivan, Jerry, Jr.....	School of Military Aeronautics, Atlanta, Ga.
Tardy, Albert H.....	New England (10 Mills Unit), Scotland.
Thompson, George W.....	Signal Corps, Aviation Service (Spruce Production Div.).
Voje, J. H., Jr.....	Co. A, 9th Battalion, 20th Engineers (Forestry).
Walter, R. Irving.....	Camp Wadsworth, Spartanburg, S. C.
Welby, Harry H.....	10th Engineers (Forestry).
Wilson, Perry M.....	Co. 10, Wisconsin State Guard.
Withington, Geo. J.....	New England (10 Mills Unit), Scotland.

The Value of Lightning Rods

The lightning rod has been the subject of many a joke, but the National Lumber Manufacturers' Association treats the matter seriously in a bulletin recently issued. Plans are shown for placing the rods on buildings of various shops so that the points most exposed to the stroke of lightning will receive the best protection. The bulletin presents figures showing property losses due to lightning.

Russe & Burgess, Incorporated, have long been familiar names in the export lumber business, and their extensive plant at Memphis, Tenn., has become well known in many foreign markets that buy the highest grades of American lumber. But the foreign business is only a portion of the activities of this firm. With a cut ranging from 75,000 to 80,000 feet a day, it is to be expected that the output should make its presence felt not only in foreign fields but also in the domestic markets.

Russe & Burgess began operations twenty-nine years ago. Eight

Modern Hardwood Operations

years ago the business was incorporated for the purpose of enabling employees to buy stock in the company. The large land holdings are all in the name of Russe & Burgess, co-partnership. In addition to the mill at Memphis, they operate a band mill at Isola, Miss., where they produce lumber of one inch or more in thickness, while the Memphis plant makes a specialty of cutting thin lumber. They have machinery in that mill designed to facilitate the sawing of thin lumber, and the operator is able to regulate the thickness to the fraction of one-sixty-fourth of an inch. This is done with a three-block McDonough carriage with Troutt rope power set works.

The officers of the company are: W. H. Russe, president; G. A. Farber, vice-president; P. Stenning Coate, treasurer; E. C. Gause, secretary; H. Johannsen, assistant secretary, and W. F. Gammage, sales manager. The company has in operation a Kraetzer preparator for treating lumber under steam pressure for the purpose of hastening the process of seasoning and at the same time improving the quality of the lumber so treated. This apparatus has been in successful operation for several years at the Memphis plant.

This company's export business dates back more than a quarter of a century, and for the last year before the war, which was 1913, ninety-two per cent of the mill's turnover was for European consumption. Since then the conditions have not been normal in the export business any more than in the domestic trade. The company maintains a sales office at No. 1 Fenchurch street, London, and the secretary, G. A. Farber, with a competent force of salesmen, has full charge of that branch of the business.

The timber supply was carefully looked after in establishing the business at Memphis. Sawmills without plenty of logs would be like guns without ammunition. The Russe & Burgess mill was built for hardwoods and it could not have been located any place in the United States where a better or more complete line of hardwoods could have been made available. It is in the center of the southern hardwood region, and supplies can come from all directions, and the pick can be had of thousands of square miles of timber.

The variety is no less remarkable than the quantity and quality; for more than a score of commercial hardwood species are available; but of course oak and gum head the list. These species reach

Russe & Burgess, Inc., Memphis

high development in the best soils lying in many parts of the Memphis region, and the climate gives long seasons of growth, which are essential if perfect wood is to be produced. Ash, cotton wood, tupelo and cypress abound in large amounts and produce lumber of the highest grade.

Having picked the center of the best hardwood region for their operation, the company not only provided for the present but looked to the future in building their plant to take care of the manufacturing end of their business. The mill and the facilities for seasoning, storing and shipping are up to date in all particulars. The McDonough band mill, which forms part of the equipment, is thirteen inches by eight feet; the shotgun feed is one by thirty-eight feet with six-inch Allis valves; a Hill steam nigger eight by ten inches by six feet; a five-saw jumbo edger; a McDonough overhead trimmer of thirty inches with nine saws; one eleven-saw forty-inch slasher; a ten-inch by seven feet Marshon resaw of the latest improved pattern, driven by a motor that develops 350 horsepower.

The main engine is of 450 horsepower and is capable of developing 500. The source of the power which drives the mill is in four boilers, six by twenty feet each, which develop about 700 horsepower in the aggregate. That gives a good working margin over and above the requirements of the engines. The boilers are automatically fed. A four-foot Mitts & Merrill hog grinds the fuel and prepares it for the furnaces, where it is speedily converted into working power. The whole equipment is first class, scientifically planned and correctly built; and an average day's work of ten hours produces from 75,000 to 80,000 feet of excellent hardwood lumber, which can hold its own in any market.

As is well known, the southern hardwoods available in largest quantities are oak, ash and gum, but many others of great value are dispersed throughout the region or occur in certain localities. Both white and red oaks abound, there being several species of each that reach the markets as lumber. There is always room for choice by buyers who prefer particular kinds. It is the center of the range of gum, and this wood's highest development is in regions contiguous to Memphis. Red gum is profoundly influenced by the character of the soil that produces it, and it so happens that a

large area tributary to Memphis has soil exactly suited to the requirements of this tree, and the lumber output is surpassed by no gum that grows elsewhere. There is timber of several other kinds, including cottonwood, willow, elm, Beech, tupelo, hackberry, not to mention cypress and other softwoods which are produced on both sides of the Mississippi river. Railroad facilities are such that the timber resources of a wide territory find their natural outlet at Memphis, and the supply will be ample for many years to come, and there is no occasion to feel concern in regard to the transportation facilities.

SORTING SHEDS

A "SEA" OF FINE HARDWOOD LOGS

SHEDS STACKED WITH THIN GUM OF WHICH THIS COMPANY IS A LEADING MANUFACTURER

The Mail Bag

B 1181—Wants White Holly

New York, N. Y., March 14. Editor HARDWOOD RECORD: We are in the market for some 4 1/4" log run white holly, and if you can put us in touch with any mill who has any of this stock to offer we will appreciate your doing so.

B 1182—Wants to Buy Hickory Squares

Any one in position to supply hickory squares might be interested in getting in touch with the following inquirer:

Grand Rapids, Mich., March 20.—Editor HARDWOOD RECORD: We are in the market for hickory squares from which to make hand screw spindles. This stock should be No. 2 and better, white, second-growth, air-dried, and we can use it in sizes 1x1", 1 1/2x1 1/2" and 2x2", in lengths from 12 to 28". We are today writing to four of your advertisers on this subject, mentioning the fact that we saw their ad in HARDWOOD RECORD.

B 1183—Wants Market for Short Pieces Black Locust

HARDWOOD RECORD is glad to reproduce the following letter, which offers short pieces of black locust that may be just the thing that some woodworker needs:

Guntersville, Ala., March 18.—Editor HARDWOOD RECORD: We are cutting black locust treenails for the government boats and have a lot of short lengths. We have several thousand pieces from 5" up to 24" long, 1 1/2x1 1/2 rough, square. We would like to find a market for these and would be pleased to have you advise what they could be sold for.

HARDWOOD RECORD has advised the inquirer that a market might be found in the production of insulator pins, for threaded dowels to be used in door manufacture, for tie plugs to be used by the railroad companies or for wedges to be used by furniture or fixture factories.—Editor.

B 1184—Has Turkish Boxwood for Sale

In a recent issue of HARDWOOD RECORD a small item referred to the use of Turkish boxwood in furniture casters. This is a rather difficult wood to obtain under present shipping conditions and therefore HARDWOOD RECORD publishes the following letter, which brings one source of supply to mind:

Rochester, N. Y., March 18.—Editor HARDWOOD RECORD: Noticing an item in the March 10 number of HARDWOOD RECORD concerning wooden casters, we would like to inquire if you might be able to offer names of manufacturers of this to whom we might offer Turkish boxwood we have on hand and which is very dry. If you can give us the information we would very much appreciate it.

Clubs and Associations

Attempt to Speed Up Memphis Car Supply

Representatives of the Southern Hardwood Traffic Association left Memphis two weeks ago for Atlanta for a conference with C. H. Markham, regional director for the southeast, which has for its specific purpose the securing of more flat cars for handling logs into Memphis and other points in this territory and the distribution of more box cars and other equipment for the handling of outbound shipments of lumber.

In connection with the latter, it is emphasized by hardwood lumber interests that they are practically shut out from Central Freight Association territory, which is the largest consumer of hardwoods manufactured in this territory.

In connection with flat cars for log handling, an increase of 33 1/3 per cent in the present number will be urged on the ground that this additional quantity will be necessary to insure anything like normal production and on the ground also that this additional car supply is absolutely essential if a very considerable quantity of logs on the Yazoo & Mississippi Valley railroad, the Frisco system and the Missouri Pacific is not to be severely damaged through worms and other insects.

Information at hand shows that, under the present rate of log movement on the Y. & M. V. road, which is by far the largest on any other line, is so slow that there will be 15,000,000 feet of the present logs on the right of way thereof unmoved by June 1 when worm and other insect damage begins to make itself seriously felt.

In the delegation from Memphis are: James E. Stark and J. H. Townshend, president and secretary-manager, respectively, of the association; W. H. Russe, Russe & Burgess, Inc., R. C. Stimson of the Stimson Veneer & Lumber Company, O. M. Krebs of the McLean Hardwood Lumber Company, Frank May of May Brothers, J. F. McSweyn, Memphis Band Mill

Company and president of the Lumbermen's Club of Memphis, and C. R. Ransom of the Gayoso Lumber Company, representing altogether a large percentage of Memphis and Memphis territorial production.

Lieutenant Faulkenberg of the ordnance department, who came to Memphis March 6 to speed up the production and movement of lumber needed for artillery wheels, accompanied the local lumbermen and it is expected that his influence will materially aid in securing the results desired.

Program for National Manufacturers' Annual

The National Lumber Manufacturers' Association will hold its sixteenth annual meeting at the Congress Hotel, Chicago, April 8 and 9, and announces the following program:

TUESDAY MORNING, APRIL 8

Trade Extension Section—J. W. Blodgett, Chairman.
Building Loan Association development.
Retail co-operation.
Developing use of lumber.
Fitting lumber to consumers' needs.
General Discussion of Trade Extension Work.
Recommendations to board of directors.

TUESDAY AFTERNOON

Governmental Relation Session—Chas. S. Keith, Chairman.
Report of war service committee.
Standardizing building codes.
National policies and the lumber industry.
Report and recommendations traffic committee.
Report and recommendations Pacific Coast committee.
General discussion, recommendations to board of directors.
Annual banquet Tuesday evening, 7 o'clock.

At the banquet will occur a general review of association progress, led by the following speakers: J. H. Kirby, R. A. Long, Edward Hines, E. B. Hazen, W. E. Delaney, F. G. Wisner and J. H. Bidell.

WEDNESDAY MORNING

Affiliated associations' session.
"What We Are Trying to Do Through the National Association"—Talks by presidents of the twelve affiliated associations.
Organization and procedure—A discussion of practical association problems read by six prominent secretaries.
Recommendations to board of directors.
Report of resolutions committee.
Report of acting secretary.
Adjournment.

Exporters' Committees Appointed

Fred Arn, the new president of the National Lumber Exporters' Association, has completed the make-up of the standing and special committees of the organization for the current year, and the machinery of the organization is now in complete shape for the work to be done. The standing committees are as follows:

Claims—Frank E. Fee, chairman, Fee-Crayton Hardwood Lumber Company; Fred Arn, J. M. Card Lumber Company; W. J. Eckman, M. B. Farrin Lumber Company, Cincinnati.

Transportation—R. S. Huddleston, chairman, Huddleston-Marsh Mahogany Company, New York and Chicago; John W. McClure, Bellgrade Lumber Company; John L. Alcock, John L. Alcock & Co., Baltimore; D. D. Hartlove, Price & Heald, Baltimore; Richard P. Baer, Richard P. Baer & Co., Baltimore; W. E. Weakley, W. M. Ritter Lumber Company, Columbus, O.; Chester F. Korn, Korn-Conkling Company, Cincinnati; Harry C. Fowler, Case-Fowler Company, Macon, Ga.; Frank Purcell, Kansas City, Mo.; Fred Arn, C. I. Millard, John L. Roper Lumber Company, Norfolk, Va., and W. J. Collins, New Orleans, La.

Membership—Edward Barber, Howard & Barber Lumber Company, Cincinnati, chairman; E. A. Lang, Paepcke-Leicht Lumber Company, Greenville, Miss.; W. H. Russe, Russe & Burgess, Inc., Memphis, Tenn.; A. S. Johnson, Mansfield Hardwood Lumber Company; R. S. Huddleston; Hugh McLean, Hugh McLean Lumber Company, Buffalo; Alex. S. Williams, Astoria Veneer Mills & Dock Company, New York; C. S. Powell, C. S. Powell Lumber Company, Lake Charles, La.; R. L. Jurden, Penrod-Jurden & McCowen; J. N. Woollett, Aberdeen Lumber Company.

Arbitration—R. H. Darnell, R. J. Darnell, Inc., Memphis, Tenn., chairman.

Stirring Meeting of Memphis Club

More than one hundred French orphans will be adopted by members of the Lumbermen's Club of Memphis, following a stirring appeal in behalf of the fatherless children of France made by Miss Elinor Fell, an English woman, at the regular semi-monthly meeting of that organization Saturday, March 18.

Miss Fell thanked those lumbermen who had already supported so many of these children. She believed it only necessary to state the case to gain the sympathy of those who had not taken part in this work and she stated it briefly in this way:

"There are more than 150,000 of these orphans of French poilus who held the long lines between civilization and something indescribable until the English and the Americans were able to come to their assistance. The morale of these simple French poilus is all right. The morale of the English soldiers is all that could be desired. The morale of the American soldiers is of the same high class. The Germans will never break through any of the lines on the West front. If they could not do this in 1914, 1915 and 1916, they cannot hope to do it now.

"But only about 40,000 of these orphan children of France are being taken care of by Americans and other peoples. And, while the morale of the soldiers in the trenches is all that it could be, the morale of the women behind the lines in France is being strained to the breaking point. These women will stand anything if they see that their children are pro-

vided for. On the other hand, it is difficult to stimulate them if they see their children hungry and without food, sick and without medical attention, ragged and without clothing. We are working to build up the morale of these women and there is no way in which it can be done so successfully as through the ten cents a day that generous business men and women of America and other countries are sending to each child they are taking care of. If their morale is broken there will be a reflection of this condition in the morale of the men on the firing line and there is no way of measuring the harm that would follow to the cause of the allies."

Subscription blanks were much in demand when she had closed her brief but powerful appeal.

J. H. Townshend, secretary-manager of the Southern Hardwood Traffic Association, said that J. F. Porterfield, general superintendent of transportation on the Illinois Central system, had stated that he would secure and put into service 150 more cars on the Yazoo & Mississippi line as soon as possible for log handling, thus bringing the total to 700. Mr. Porterfield came here as a result of the recent conference held by Memphis lumber interests with C. H. Markham, regional director of railroads for the southeast.

Mr. Townshend also advised members of the club that the interstate commerce commission had adopted the suggestion of the association for an advance of one cent per hundred pounds on lumber shipments from southern producing territory to destinations in Central Freight Association and Eastern Trunk Line territory instead of granting the fifteen per cent advance sought by the carriers. He said that no definite time had been set for the new rates to become effective, as tariffs would have to be prepared covering them. He intimated that it might be several months.

On motion of S. B. Anderson, the club voted in favor of the naming of a special committee to draw up "terms of sale" for hardwood lumber, which, after adoption, are to be used by all members of the Lumbermen's Club of Memphis. This is regarded as a long step in the direction of more general use of "trade acceptances." It is also expected that it will eliminate the wide divergence in the practice of selling lumber which is now so apparent.

On motion of Earl Palmer, chairman of the civic committee, an invitation was ordered extended to the Rotary Club of Memphis to attend a dinner to be given in the near future by this organization. The entertainment committee will make the necessary arrangements. It will be a social and good-fellowship meeting.

John W. McClure, Bellgrade Lumber Company, was selected as delegate from the club to the annual of the National Wholesale Lumber Dealers' Association at the Waldorf, New York City, March 27-28.

J. H. Hines, chairman of the law and insurance committee, called the attention of the lumbermen to the importance from their standpoint, of the passage of the War Finance Corporation measure, in that this would make it possible for the government to render financial assistance to the firms or corporations engaged in manufacturing war necessities, and in that it would stabilize the value of Liberty bonds and make of them a genuine medium of exchange. He also urged more general use of the trade acceptance, saying that this would make capital liquid and release about \$4,000,000,000 now tied up in open credit accounts.

Mr. Hines also referred briefly to the legislation in congress designed to make the purchasing power of the American dollar in every foreign country of the world par instead of about eighty-five cents as at present, thus greatly facilitating purchase of foreign goods. This legislation, he explained, will afford guarantees that Liberty bonds will be paid in full at maturity, with accrued interest, by placing the entire resources of the government behind them.

Hardwig Peres, one of the Four-Minute men of Memphis, delivered a stirring address to the lumbermen, urging them to stand by President Wilson by paying their income taxes cheerfully and promptly and by resisting in every possible way the German propaganda designed to create the impression that this is a "rich man's war."

H. J. M. Jorgensen responded briefly to this address, saying that the lumbermen had only one object in life now, that of making money, but that every dollar they made was available for helping to carry on the war and to insure victory. "Our money is good for that. It will be good for nothing if we let the Germans win," he said in conclusion.

Resolutions of respect and sympathy were adopted by the club in connection with the sudden death from heart disease, Friday morning, March 15, of T. R. Winfield, a member of this organization, president of the Cole Manufacturing Company and an ex-president of the Business Men's Club. These were ordered spread upon the minutes of the club while the secretary was instructed to send a copy thereof to the family and to the business associates of the deceased.

There were more than 75 members and visitors present. The usual luncheon was served. J. F. McSweyn occupied the chair.

Townshend's Statement on Rate Victory

Regarding the recent decision of the Interstate Commerce Commission on the question of re-opening the fifteen per cent advance of freight rates, J. H. Townshend, secretary-manager of the Southern Hardwood Traffic Association, makes the following statement to the membership:

We have just received a press dispatch from Washington to the effect

that the commission has handed down its decision in the Northern and Eastern fifteen per cent case.

This case was the re-opening of the fifteen per cent case which was heard at Washington last spring. Our testimony in the re-opening of this case was given on November 13, 1917, at Washington. In our testimony we stated that the members of the Southern Hardwood Traffic Association were as patriotic as any other citizens in the United States and were willing to do anything and everything in their power to sustain the government in the prosecution of the war, and were perfectly willing to pay additional freight charges if necessary to successfully prosecute the war, but that the members were fully convinced that they are now paying more than their due proportion of the transportation charges, while many other commodities were not paying their due proportion; that in any event they were opposed to a fifteen per cent increase because it would disrupt the present relationship, and as an illustration, we pointed out to the commission that under a fifteen per cent advance, Pine Bluff, Ark., would pay about 1c per 100 pounds more than Wausau, Wis., and in some instances, Evansville would receive a 1c greater advance than Louisville, and that St. Louis would receive a greater advance than Cairo, Ill., etc.; and that the only logical way to establish an advance on lumber would be in cents per 100 pounds; that under no circumstances should the advance exceed 1c per 100 pounds.

The press dispatch indicates that the commission while allowing a fifteen per cent advance, with one exception, on all of the commodities which we showed in our exhibits as being on a better basis than lumber, they allowed lumber and forest products rates to be increased only 1c per 100 pounds, and whereas, these advances offset the Ohio and Mississippi river and northern territory, the through rates from this territory could not be advanced to exceed 1c per 100 pounds. As a fifteen per cent increase would have averaged from 3c to 4c per 100 pounds advance, we feel that we have won a great victory.

We hardly think that the new rates will become effective for several months, but just as soon as we hear something definite on this point, we will advise our members promptly.

Our members are aware of the fact that this association took the initiative in handling this case, and this thoroughly illustrates what can be accomplished through co-operative efforts.

States that Woodstock Committee Doesn't Fix Prices

HARDWOOD RECORD has received the following letter from A. B. Thielens, chairman of the woodstock committee of the National Vehicle and Implement Association, which has in charge the work of handling contracts for the production of army wagons:

2. The committee meets in Chicago at the La Salle Hotel on Thursday of each week and as in the past will always be glad to confer with the lumbermen, singly or collectively. The impression gathered through the misunderstanding on the part of some of the lumbermen is to be regretted of course but the facts are:

(a) The contractors making army vehicles and spare parts, including wheels for the Government, have not combined to purchase woodstock, lumber or other materials, but a committee has been organized and is now known as the woodstock committee or Information Division, whose duty it is to assist the contractor and producer in connection with woodstock, requirements.

1. It is the official committee of the Jeffersonville depot, Advisory to the Quartermaster in charge of that depot.

2. It is a committee officially recognized by the office of the Quartermaster-General in Washington.

3. It is a committee officially recognized by the War Industries Board at Washington.

4. It is also an official committee of the National Implement and Vehicle Association.

(b) The woodstock committee does not arbitrarily fix prices but releases to the contractors and producers alike a list of prices recommended as being fair and reasonable. The plan under which this committee operates has been freely distributed and will be sent upon inquiry to interested parties.

3. The committee does not undertake to adjust differences of opinion that may arise between the contractor and the producer, but will act in a friendly manner on request of either party. There has never been, by request or intimation, any effort on the part of the committee to influence contractors in cancelling orders that may have been placed with producers.

With the Trade

Close Big Arkansas Timber Deal

Probably the biggest single deal in hardwood timber lands ever consummated in Arkansas was last week closed by W. L. Hemingway, president of the Mercantile Trust Company of Little Rock, representing Hough & Redfield of Connecticut and others, when 80,000 acres of hardwood timber land in South Arkansas were sold to the Arkansas Timber Land Company for a consideration of \$625,000.00. Frank May, president, and L. K. Salsbury, secretary-treasurer, both of Memphis, acted for the timberland company.

The land lies in a solid tract in Ashley, Bradley, Calhoun, Quachita and Union counties. It was granted to the State of Arkansas by the United States under the Swamp Land Grant of 1850, soon afterwards granted by the state to certain railroad corporations for the purpose of encouraging and assisting in constructing railways, later, upon failure of the railroads to comply with the terms of the grant, the land reverted to the state, and was bought by Hough and Redfield, who held the land for many years, selling it a few years ago to the American Timber Company, an Iowa corporation. The American Timber Company defaulted in the payment of bonds issued against the land, and foreclosure proceedings were brought. The land was sold under court orders and Hough and Redfield again became the owners.

The new owners will develop the land, cutting off the vast quantities

of the hardwoods, including oak, cypress, and gum and other merchantable timbers. Later the lands, which will be valuable as farming lands, are to be cleared and placed in cultivation and sold. This tract is said to be one of the richest farming sections of the state.

The plant at Newport formerly owned and operated by the Fee-Crayton Hardwood Lumber Company of Dermott, Ark., has been sold, and the new owner is overhauling the plant preparatory to the manufacture of wagon stock.

E. P. Ladd, the well known hardwood lumber manufacturer of Furth, Ark., is now in a hospital in Pine Bluff where he was taken for treatment for bullet shot wounds received by him on March 15. Mr. Ladd interfered with a quarrel that was taking place between a negro man and the mill foreman at Mr. Ladd's plant. The negro turned on him and fired two shots from a revolver. One of the shots penetrated Mr. Ladd's arm and the other entered his chest. Reports from Pine Bluff are to the effect that the wounds are not regarded as serious.

The shingle mill of P. A. Byrd at Wrightsville, Ark., was destroyed by fire on the night of March 10. The estimated loss is \$5,000.00, with no insurance. The plant is to be rebuilt.

The Memphis, Dallas and Gulf Railroad has been granted a franchise by the Hot Springs city council, to construct tracks in that city so as to make physical connection with the Rock Island lines entering that city. The move will likely ultimately result in a direct and through line over these lines from Little Rock through Hot Springs to Texas and the West. Some time ago the Memphis, Dallas and Gulf Company was notified by Director General McAdoo that it would be retained by the Government if physical connection were made between that line and the Chicago, Rock Island and Pacific lines at Hot Springs.

Hardwood Ship Supplies

The Gulf Coast Hardwood Milling Company, Sweeny, Tex., has been organized for the purpose of manufacturing live oak ship knees, launching wedges for ships, and tree nails. The company controls 26,000 acres of timberland containing pine, ash, oak, and pecan, and will operate a mill with a capacity of 20,000 feet a day. The officers of the company are: W. H. Gilmartin, president; C. F. Browning, vice president; H. E. Cummings, secretary and treasurer, and P. V. Petty, general manager, the officers constituting the board of directors.

Mackintosh Becomes Dollar-A-Year Man

Charles H. Mackintosh, editor of "Logging" and "The Clyde Diamond," journals published by the Clyde Iron Works of Duluth, Minn., and interested in advertising service work in Duluth, has answered the call for service in Washington as editor of bulletins for the division of four-minute men and the committee on public information.

Mr. Mackintosh is quite prominent in advertising and literary circles, and those in charge at Washington were directed to him through some of his patriotic editorials in "Logging."

The division of four-minute men has charge of the work of the organization of 25,000 patriotic speakers. In addition it prepares and distributes bulletins to the army cantonments here and abroad.

It will be Mr. Mackintosh's work to prepare, assemble and edit material on which will be based the four-minute addresses for the four-minute men and in addition the preparation of bulletins to more than 45,000,000 school children, the purpose being to stimulate their interest in causes and effects of the war. He will also edit bulletins to the cantonments.

Mr. Mackintosh is for the third time president of the Advertising Club of Duluth; president of the Direct-Mail Association, and of Mail Advertising Department of the Associated Advertising Clubs of the World. As president of the Direct-Mail Association he is chairman of the War Service committee.

The officials of the Clyde Iron Works have freely consented to Mr. Mackintosh's acceptance of the call and arrangements will be made to continue the publication of some type of magazine based upon "Logging" and "The Clyde Diamond." He will assume his duties at Washington at the end of March.

Isaac Stephenson

The death of Isaac Stephenson, pioneer in the lumber industry of the northwest and former United States senator from Wisconsin, occurred after a week's illness at the family home in Marinette at 1:35 o'clock Friday morning, March 15. The cause was hardening of the arteries, a condition resulting from the deceased's advanced age, which was nearly eighty-nine years. The veteran lumberman was conscious almost to the last moment. All but one of his children were at his bedside. The report of his demise caused widespread sorrow throughout the state and telegrams of condolence and sympathy were received from all parts of the state as well as from the northwest and Washington, D. C., where the former senator had hundreds of friends. The funeral, held at Marinette at 2:30 o'clock Monday afternoon, March 18, was largely attended notable among the mourners in the cortege being Governor Philipp and several of the state officers as well as a delegation from congress. For five minutes all business and manufacturing plants in the cities of Marinette and Menominee remained idle as a tribute to the twin cities founder and in accordance with a proclamation issued by the mayors of the two municipalities.

Isaac Stephenson was born in York county near Fredericton, New Brunswick, June 18, 1829, and lived a life full of stirring experience through the days when all those who lived in Wisconsin were pioneers. He never shirked a hardship nor expected the man who worked for him to do things he did not himself take part in. He was always democratic and lived in the greatest simplicity. He had a reputation for uprightness and honesty which caused the tax assessors, it is said, to accept his inventory of property without checking it over. Investigations had always shown Mr. Stephenson had assessed himself at a higher figure than the officials themselves would have done.

Mr. Stephenson first went to Milwaukee in 1845 but remained only a short time leaving for Janesville, Wis., where he had much misfortune as a wheat farmer. He determined to try his fortunes in the north woods and in 1848 began a two-year experience as a hauling contractor. His winters were spent in the woods and in the summer he was a sailor on the great lakes. Before he was twenty-two years of age he owned a controlling interest in a large schooner. After several years in the transportation and lumber business, Mr. Stephenson entered politics and in 1866 was elected to the Wisconsin assembly. In 1882 he was sent to congress and served three terms in succession. He was first elected to the United States senate by the legislature at the memorable session in 1906, when, after a deadlock of days, he was chosen by a majority of 3 votes. He was reelected in 1909. The election caused the legislature to file a demand with the senate for an investigation and although the expenditure of \$107,000 in the campaign was shown Mr. Stephenson was not found to

CHARLES H. MACKINTOSH, DULUTH, MINN.

THE LATE ISAAC STEPHENSON, MARINETTE, WIS.

J. H. TOWNSHEND, MEMPHIS, TENN.

have used corrupt methods. The bill was given a clean bill by a subcommittee of the senate and returned to the house by a vote of 40 to 31.

Mr. Stephenson was one of the richest men in Wisconsin and his wealth is estimated at close to \$4,000,000. The enterprises with which he was closely associated and, for the most part, owned the controlling interest, are the North Ludington Company, the Peshtigo Company, the Stephenson Transportation Company, Sturgeon Bay and Lake Michigan Ship, Canal and Harbor Company, the Stephenson National bank, the Peshtigo Lumber Company, the Marinette and Menominee Paper Company, and the Stephenson Manufacturing Company. He was also associated with H. A. J. Upham and James K. Hisley as trustees of the \$15,000,000 Wells estate.

Mr. Stephenson was married three times; in 1852 to Margaret Stephenson, in 1873 to Augusta Anderson and in 1884 to Elizabeth Burns. The family consists of Mrs. Stephenson, wife of the deceased, Mrs. Joshua Hodgins, Mrs. H. J. Brown, Mrs. Ralph Skidmore, all of Marinette, Mrs. Nelson J. Ludington, Chicago, and Mrs. J. Earl Morgan, Oshkosh, all daughters. Another daughter, Mrs. W. H. George, died a few years ago as did also his eldest son, Isaac Watson Stephenson. Grant Stephenson, a son, is now a lieutenant in command of an American mine destroyer in foreign waters. Thomas and William Stephenson, half brothers of the senator, reside in Marinette. The grandchildren are Miss Margaret Hodgins, Marinette; Howard George, in officers' school at Camp Custer, Isaac George of Marinette, Isaac W. Stephenson and Mary Elizabeth Stephenson, also of Marinette and the three little children, two sons and a daughter of Grant Stephenson in Milwaukee. A great grandchild, Elizabeth Carpenter George, is but a month old, the mother being in Menominee, Mich.

Rev. Samuel Plantz, president of Lawrence college of Appleton, Wis., officiated at the funeral, assisted by Rev. Mr. Reynolds of Gram Methodist church at Marinette.

Mr. Stephenson was a generous contributor to the welfare of his home city, having donated sites for parks as well as various monuments for their beautifying, and also donated the Stephenson public library and endowed the Stephenson manual training school and several other public buildings.

Pertinent Information

Building Immense Army Warehouse

Work is now under way at Chicago on the first two units of a three-unit government warehouse that is to cost more than three million dollars and when completed will be one of the biggest buildings of its kind in the world. The building is to house the quartermaster's and ordnance stores of the army.

The units of the building now being built will provide a total of 1,200,000 square feet of floor space and about 18,000,000 cubic feet of storage space. The third unit which may be added at any time will give the building a total of 1,800,000 square feet and 27,000,000 cubic feet.

Seventeen thousand five hundred carloads of material, including 3,500,000 feet of lumber, will go into the first section of the building.

Baltimore Exports Show Advance in January

The showing made by the statement of exports for January is quite satisfactory, as compared to what has gone before when the general situation is considered, though, of course, the volume of business done amounts to only a fraction of the aggregate in normal times. For almost the first time fir boards have a place in the statement, not less than 96,000 feet, of a declared value of \$4,604, having gone out for the month. White pine also figures in the list, but with a very small lot, and poplar is held down to limited proportions. "All other boards," however, are again in evidence, and with not less than 194,000 feet valued at \$10,043, at that. But spruce, as was to have been expected, again holds a position far in the lead of all other woods, making up in fact, all but a small part of the total, with shipments of 1,118,000 feet of a declared value of \$116,806, against a total for all the exports of \$143,058. The striking feature about the shipments of spruce lies in the sharp advance in value, the exports for January being worth more than the 1,279,000 feet shipped in the corresponding month of 1917, which were valued at not more than \$88,440. The variety of shipments was greater last January than a year ago, which suggests that a further depletion of stocks abroad must have taken place.

American Vessels in Commerce

In 1915 American vessels carried our exports to the value of \$366,512,946; in 1916 the value rose to \$656,245,026; and in 1917 to \$934,256,237. During the same period our exports were carried in foreign vessels to the amount of \$2,770,301,315 in 1915; \$4,129,331,285 in 1916, and \$4,432,796,778 in 1917. American vessels increased their carrying nearly threefold and foreign vessels fell short of twofold.

May Collect Additional Statistics

Franklin H. Smith of the Forest Service, Washington, D. C., spent last week in Chicago in the interest of the forthcoming lumber census. A movement is on foot to collect fuller statistics of the annual production of veneers and cooperage stock than has been done heretofore. These two important branches of wood utilization have not been included in yearly statistics, as lumber has, and there is need for fuller information.

Hardwood News Notes

< MISCELLANEOUS >

The H. H. Wiggin Lumber Company has incorporated at Boston, Mass., with a capital of \$100,000, as has the Milwaukee Woodcraft Corporation, Milwaukee, Wis., at \$25,000; the Greensburg Lumber & Mill Company, Youngwood, Pa., capital \$60,000; and the Rochester Moulding Works, Rochester, N. Y., at \$50,000.

The capital stock of the Vetal Lumber & Manufacturing Company, Knoxville, Tenn., has been increased to \$100,000.

At Thomasville, N. C., the Hoover Chair Company has sustained a loss by fire.

The Gillett Manufacturing Company, Clio, Mich., has made a change in its capitalization, it having been increased to \$100,000.

< CHICAGO >

The Frain-Doud Manufacturing Company has incorporated at \$4,000 to manufacture phonographs at 4524 N. Crawford avenue, city.

The J. L. Metz Furniture Company has been incorporated here.

Frank F. Fish, secretary of the National Hardwood Lumber Association, leaves this week for New York where he will attend the meeting of the National Wholesale Lumber Dealers' Association. Since closing up the association's emergency bureau office at Washington and returning to Chicago Mr. Fish has been "under the weather" physically but is getting around to normal condition again.

The grading rules committee of the National Hardwood Association met at Chicago on Friday of last week, there being a full list present. Among those who attended were: M. J. Fox, Von Platen Lumber Company, Iron Mountain, Mich.; H. C. Fowler, Case-Fowler Lumber Company, Macon, Ga., and John McClure, Bellgrade Lumber Company, Memphis. Mr. McClure came on directly from Washington, D. C., where he with R. L. Jurden and John M. Pritchard, respectively president and secretary-manager of the American Hardwood Manufacturers' Association, were in protracted and momentous conference with officials on the question of wagon oak for war vehicles. The session of the grading committee did not complete the work before it and it is likely that another meeting will be called in the near future.

Representatives of the panel industry met in Chicago on Friday of last week, among those attending being: D. E. Kline, Louisville; Howard Young of Indianapolis, Ind., secretary of the national organization, Mr. Teesdale, Forest Products Laboratory, Madison, Wis.; Mr. Thompson, Carrom Company, Ludington, Mich.; E. W. Benjamin, Cadillac Veneer Company, Cadillac, Mich.; E. V. Knight, New Albany Veneering Company, New Albany, Ind.; A. E. Gorbam, Gorbam Brothers Company, Mt. Pleasant, Mich.; J. T. Crandall, Crandall Panel Company, Brocton, N. Y., and C. B. Allen, Allen-Eaton Panel Company, Memphis, Tenn. The bulk of discussion at the sessions had to do with ways and means for 100 per cent efficiency in meeting the government's call upon the panel industry in connection with its airplane program.

Reports of inspectors' work in the latest bulletin of the National Hardwood Lumber Association show 9,764,077 feet inspected by salaried inspectors; 2,202,534 feet by fee inspectors, making the total 11,966,611 feet of February inspections.

Owing to his inability to give to the office the time which it requires, L. J. Pomeroy has resigned his office as jabberwock in the interest of Hoo-Hoo. A. C. Quixley succeeds him. Mr. Quixley in turn is succeeded as vice-gerent snark by G. A. Vangness.

HARDWOOD RECORD has received copy of the banquet program of "Atkins Pioneers," an organization of twenty-year employees of E. C. Atkins & Co., Indianapolis. Another interesting publication is a valuable booklet entitled "Housing and Industry" by W. S. Whiting of the National Lumber Manufacturers' Association.

Chicago welcomed quite a few distinguished visitors last week who were here on personal business affairs. The list includes: W. W. Gamble, general manager, Yawkey-Bissell Lumber Company, White Lake, Wis.; W. T. Grossman, Tipler-Grossman Lumber Company, Green Bay, Wis.; G. W. Jones, G. W. Jones Lumber Company, Appleton, Wis., and J. K. Ferguson, Ferguson Hardwood Company, Paducah, Ky.

< BUFFALO >

An official report made as to housing conditions in Buffalo shows that there are ninety-eight vacant houses and 107 flats. Accommodations are not so much unequal to the needs of factory workers as was at first claimed, but with an increase in the number of workers in munition plants this summer it is expected that a large demand for houses will develop. The reports that the government may interest itself in the housing problem has created much interest among real estate men and builders here, but it is not believed that the plan will be carried out in this city.

A timber-owner and lumberman from Florida was here the other day

trying to interest boat men and the canal interests generally in an enterprise to build canal fleets on his premises, where there is plenty of timber and plenty of other resources. These boats can then be brought up safely to New York and put into the canal fleet. The timber is mostly yellow pine, with some oak, and the owner claims that this is the cheapest and surest way of turning out canal boats for the new barge canal this season. People are very slow in taking up these projects, and it looks now as if the season would be well under way before anything at all is done, much as transportation facilities are needed between here and New York.

At the annual meeting of the Buffalo Lumber Exchange Horace F. Taylor was re-elected president, Clark W. Hurd vice-president and John S. Tyler secretary-treasurer. All were chosen unanimously. Directors were elected as follows: Horace F. Taylor, M. M. Wall, Henry I. George, Clark W. Hurd, M. P. Kinsella, C. Walter Betts, William L. Blakeslee, R. F. Kreinheder, Elmer J. Sturm, Harry L. Abbott and John S. Tyler. The exchange commissioned Millard S. Burns to enter complaint before the Interstate Commerce Commission as to the discrimination of the railroads against Buffalo. Mr. Burns is acting in connection with the Chamber of Commerce. He has made his report and received an answer from the commission, agreeing to take the matter up.

Fire caused a loss of several thousand dollars March 9 at the planing mill of the J. E. Cutler Company, Welland, Ont. The portion containing the machinery was saved with little loss.

F. M. Sullivan of T. Sullivan & Co., has returned from a business trip to Michigan and reports that traffic conditions are showing little relief as yet.

◀ PITTSBURGH ▶

The American Lumber and Manufacturing Company is rushing its big operation at Lenox, Ky., in order to provide oak and other hardwood to fill the government orders which it has taken for shipment on eastern Seaboard points.

The Acorn Lumber Company reports a big inquiry from manufacturing and industrial concerns and says that prices on most stocks are very firm so that the wholesaler can often get a nice premium for quick delivery.

A. D. Knapp of the Nicola Lumber Company expects to make a business and pleasure trip to the South shortly. He reports business improving, but wholesalers very cautious about what they take on.

E. H. Schreiner Lumber Company says that oak and maple are in splendid demand with every indication that present prices will be continued right through this year.

J. W. Hulse, formerly manager of the old McDonald Lumber Company of this city, is now making a success of drilling oil wells in Ohio. His latest operations have been in Morgan and Trumbull Counties.

J. K. Fawcett, formerly of the Kendall Lumber Company, is now a lumber expert on the Pacific Coast in the employ of the United States Shipping Board.

The Yellow Poplar Lumber Company at Coal Grove, Ohio, resumed operations in full last week, and will make a big cut of lumber this summer.

R. M. McGee and George Bowers, of Big Run, Pa., have bought a tract of virgin white oak timber at Marion Center, Pa., and expect to produce 2,500,000 feet of lumber from the tract.

The Frampton-Foster Lumber Company reports the demand for oak almost phenomenal. Prices are going out of sight and anybody who can deliver stock quickly has got a big "jump" on the market.

The Allegheny Lumber Company finds business good—better in fact than can be handled in the face of delayed shipments and deliveries. Buyers are coming into market more frequently and are more disposed to pay good prices for hardwood than a few weeks ago.

Mayor E. V. Babcock of the city of Pittsburgh, spent two weeks lately among the cantonments in the South. He is back on the job now and already is making some notable improvements in showing how to run Pittsburgh on a business basis.

◀ BALTIMORE ▶

Notification of the various changes made in the by-laws of the Baltimore Lumber Exchange at the last quarterly meeting held on March 4 have been sent out to the members by Secretary L. H. Gwaltney. Perhaps the most important of these changes is the increase in the charge for inspection of lumber to 60 cents per 1,000 feet, of which amount the inspector gets 53 cents and the exchange seven cents to maintain the bureau.

The large four-story brick factory of the Cumberland Valley Spoke & Bending Company was destroyed by fire on the night of March 16. The origin of the blaze is not known, but as the company was engaged on government work a suspicion of incendiarism is entertained. The loss is estimated at \$50,000, partly covered by insurance. Henry F. Wingert is president of the company.

That building operations have continue to lag is shown again by the statement of the building inspector for February, during which month the declared value of the structures for which permits were issued did not exceed \$394,885, with \$47,926 more for additions and \$45,400 for alterations. The structures authorized during the month included eight two-story brick dwellings, valued at \$18,000; one power house, \$65,000; sixteen manufactories and warehouses, \$300,150, and eight garages, \$11,735,

a grand total of \$488,210. This falls far below the aggregate for corresponding months of other years, and shows to what extent the unsettled general conditions, the high prices of materials and the scarcity of labor have operated to check construction work. The demands upon the yards from the builders are very limited, and the government continues to be the largest customer of the lumbermen, though, of course, this business is mainly in yellow pine and other soft woods.

Major G. L. Wood, who prior to entering the service of the United States with the Forestry Regiment assembled at Washington, was vice-president and general manager of the R. E. Wood Lumber Company, Continental building, is back from France on a visit and has been renewing acquaintances during the last week.

A cargo of 2,000,000 of spruce shingles arrived here from Nova Scotia in the British schooner E. E. Armstrong about March 8 for William M. Burgan. It was expected that commencement of construction work on several hundred houses for the government to accommodate the increase in the number of ship workers at the plant of the Bethlehem Steel Company and other corporations here might cause an urgent demand for the shingles, but the project in question has not yet been started, though there can be no doubt that a good demand for the shingles will be found.

Recent visitors here include J. W. Haigh of the Engineering & Lumber Company, Ltd., of London, who came to the United States to see about opportunities for getting hardwood stocks shipped to the United Kingdom. Among others he called upon Harvey M. Dickson, secretary of the National Lumber Exporters' Association.

William H. Russe of Russe & Burgess, Inc., Memphis, was here on March 8 and also saw Mr. Dickson, going with him the following Monday to Washington, where Mr. Russe had business with government officials.

The special committees include the following:

Auditing—Holger A. Koppel, Baltimore.

Marine Insurance—John L. Alcock, John L. Alcock & Co., Baltimore; Edward Barber, Howard & Barber, Cincinnati; Gustave A. Farber, Russe & Burgess, Inc., London.

Importation of Hardwoods and Other Woods—W. J. Eckman, M. B. Farrin Lumber Company, Cincinnati; W. B. Burke, Lamb-Fish Lumber Company, Charleston, Miss.; R. C. Whitbeck, Ferd Brenner Lumber Company, Alexandria, La.; R. S. Huddleston, Huddleston-Marsh Mahogany Company.

Merchant Marine—John L. Alcock, John L. Alcock & Co.; Richard P. Baer, Richard P. Baer & Co., Baltimore, and Holger A. Koppel, Baltimore.

Liverpool Measurements—Gustave A. Farber, Russe & Burgess, Inc., Memphis, London, and two others to be appointed at the discretion of the president.

National Councillor U. S. Chamber of Commerce—John L. Alcock.

Alternate National Councillor of U. S. Chamber of Commerce—W. J. Eckman, M. B. Farrin Lumber Company.

◀ COLUMBUS ▶

The death of Peter Kuntz, Sr., March 3, at his home in Dayton, Ohio, removes from the industry in this state the largest retail lumber yard owner in Ohio, and one of the largest line yard owners in the country. He was one of the first men in the country to undertake co-operative purchasing, and the collective direction in the line yard system which has since become an almost dominant factor in the industry, especially in the thinly populated sections of the West. Mr. Kuntz was born in Germany seventy-nine years ago, and came to America when he was but two and one-half years old.

The work of rebuilding the planing mill of the Lyman Hawkins Lumber Company of Akron, which was destroyed by fire February 2, will be started at once. A loss of about \$30,000 entailed the further loss of interruption in work connected with government contract.

The Lockland Lumber Company of Cincinnati has wired a protest to Washington against the proposed elimination of the jobber from the coal trade, by which Fuel Administrator Garfield considers he can bring about a more equitable distribution of fuel.

The Washington Court House Lumber Company has recently purchased from L. B. Banks the Hillsboro Lumber Company of Hillsboro, Ohio. L. G. Barger has been made manager of the concern under the new management.

R. W. Horton of the W. M. Ritter Lumber Company reports an increasing demand for hardwoods as the spring advances. This is especially true of the retail demand, which is becoming stronger. Factories, especially those making boxes and implements, are also good customers. Prices have recently been advanced.

The Imperial Lumber Company, of which J. A. Ford is at the head, is having a good hardwood trade with prices strong in every particular.

Plans for new storage plant and garage have been completed by the Black River Lumber Company of Lorain, Ohio, which firm is controlled by the Peter Kuntz Company. The warehouse will occupy a plot 600 feet long, and will be of frame construction with concrete floor. Officers of the company are: President, Peter Kuntz, Jr.; vice-president, Joseph Murphy; secretary, Martin Kuntz; treasurer, J. I. Murphy, who also is general manager.

The West Liberty Lumber Company of West Liberty, Ohio, has been incorporated with a capital of \$20,000 to deal in lumber. The incorporators are Peter Kuntz, Jr., Martin Kuntz, J. A. Payne, Joseph Murphy and E. R. Albaugh.

▲ CLEVELAND ▲

First and in a series of warehouses, being erected by the Brooklyn Lumber Company, is now in completion. While this firm has been considered one of the leading factors in the Middle-west in yellow pine, it is now recognized as an important distributor of hardwoods, and special attention has been given to this division in the erection of the new warehouse. All hardwoods are stored on the second floor of the new building, each material in a separate compartment behind sliding doors. The material is arranged upon racks, so that a small or large quantity may be taken out, without disturbing the rest. Principal hardwood carried here is oak flooring and interior trim.

Contracts for aeroplane and other aircraft propellers are soon to be considered by the propeller section equipment division of the Aircraft Board, which has established offices at Union building, Euclid avenue and East Nineteenth street, this city. F. M. Sibley is director of this division. Following the policy of the government to limit publication of information concerning its equipment activities, detailed information regarding this equipment is withheld. According to Mr. Sibley, however, the aircraft division will be in the market for first and second quarter sawed white oak, birch and yellow poplar, and will be pleased to receive communications at its offices here.

◀ INDIANAPOLIS ▶

In a statement recently prepared for publication to disclose the importance of some of the industries of Indianapolis, John H. Talge, president of the Talge Mahogany Company, asserts that Indianapolis is without doubt the largest veneer center in the world, New York being second. He estimates the value of the output of the city's veneer mills at \$3,500,000 annually. Mr. Talge does not believe that the war will seriously interfere with the successful operation of the veneer mills, although he said it is increasingly difficult to receive shipments of foreign woods. This condition has resulted in a greatly increased demand for the domestic woods, he declared.

The Central Lumber Company of Indianapolis was incorporated last Tuesday with a capitalization of \$10,000. Directors of the company are Elmer W. Hugher, Augustus Jennings, and Lewis Wallace. The company expects to engage in the manufacturing end of the industry.

The E. & W. Lumber Company of South Bend, Ind., has just increased its capitalization from \$3,000 to \$10,000.

A judgment of \$7,500 was received in a county court of Lebanon, Ind., by Otto Burroughs, against the Talge Mahogany Company of Indianapolis. The plaintiff claimed that he was injured permanently while in the employ of the company two years ago. During the trial the defendant offered to compromise the case for \$2,000 and the plaintiff held off for a settlement of \$3,000 with the result that no compromise was effected.

Robert H. Foster, head of the Robert Foster Lumber Company of Indianapolis, has been appointed a field secretary of the American Red Cross. Mr. Foster has been assigned to camp relief work at the army post at Fort Benjamin Harrison, a few miles northeast of Indianapolis. It will be his duty to look after the needs of the sick soldiers and to supply all of the men with the regulation Red Cross equipment.

◀ EVANSVILLE ▶

Claude Wertz of Maley & Wertz, hardwood lumber manufacturers of this city, returned a few days ago from St. Louis, where he was called on a business mission. Mr. Wertz reported trade in that city very good.

The Ohio river here was on a rampage about a week ago and passed the danger line of thirty-five feet at Evansville on Tuesday, March 19. According to the government forecaster at Evansville, a stage of about thirty-six or thirty-seven feet would be reached, but he did not think this would do any serious damage to interests along the river. The high water is expected, however, to delay many of the farmers in the lowlands from plowing for their corn crop.

A boom has been started for William H. McCurdy, president of the Hercules Buggy Company at Evansville, for the republican nomination for Congress in the first Indiana congressional district. Mr. McCurdy is one of the leading citizens at Evansville and has been prominent in affairs of his party for a number of years.

Fred Bergman of Bergman & Maun, planing mill owners and lumber dealers at Chrisney, Ind., was a business visitor here a few days ago.

James Hunnell, aged seventy-three years, one of the best known lumber salesmen in this city, died on March 17 from heart disease. Mr. Hunnell was in apparent good health up to the time of his death. For more than thirty years he had been connected with the Edward Hines Lumber Company of Chicago and traveled through Indiana, Illinois and Missouri, where he was well known. He is survived by his widow.

Practically all the lumber manufacturers and retail dealers in this city will take an active and leading part in the third Liberty loan campaign that will be launched on April 6. Among these being Daniel Wertz and

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

Claude Wertz of Maley & Wertz, Elmer D. and Paul W. Lohring of the Lohring Lumber Company, Charles A. Wolfen of the Wolfen-West Side Lumber Company, J. C. Greer of the J. C. Greer Lumber Company, Frank M. Cutsinger and Joseph Waltman of the Evansville Band Mill Company, Louis Holtman of the Schnute-Holtman Company, George O. Worland of the Evansville Veneer Company, Roy Foster of the McPerson & Foster Company, Bert Tisserand of the J. C. Greer Lumber Company, Theo. E. Reichtin of the Theodore E. Reichtin Lumber Company and many others.

Plow manufacturers in Evansville report they are having a good run at the present time and the four large factories here are being operated on steady time. A great many plows turned out here are being shipped

to the South and manufacturers report they are getting more freight cars than they were able to secure a few weeks ago. They say the outlook for business is good.

MEMPHIS

Lumber interests here are breathing much more freely on the score of flood conditions. They felt certain a little while ago that there would be one of the most disastrous stages in the history of the Mississippi, but they are rapidly coming to the conclusion that they have nothing to fear in this line this season. No high water is indicated at the present time, and so much of the snow and ice in the upper valleys of the Mississippi and its tributaries has disappeared that no danger is feared from that source.

Moore & McFerrin are rebuilding their sawmill in North Memphis, which was destroyed by fire a short time ago. The new plant will be equipped with a band saw, and will have a capacity of twenty-five thousand to thirty thousand feet daily. This firm is engaged in the manufacture of box shooks, but is only able to operate its box factory on partial time because of the difficulty of getting low grade cotton wood and gum therefor.

S. H. Stout has been chosen by the Anderson-Tully Company of Memphis to operate its big band mill at Vicksburg, Miss. He succeeds N. J. Shepard, who has accepted the position of manager of the plant which is being constructed by the Utley-Holloway Company of Chicago at Clayton, La. This mill will be ready for operation in a few days and will have very large capacity. It will be used to develop the timber on thirteen thousand acres of land acquired by that firm last year.

The H. W. Darby Lumber Company of Grenada, Miss., has opened a sales office in the Bank of Commerce Building here. It is in charge of F. A. Brewer, sales manager of the company. Mr. Darby will remain at Grenada and will superintend operation of the four mills of the company located as follows: One at Kosciusko, Miss.; one at Greenwood, Miss., and two at Money, Miss. This firm will have a yearly output of about twenty million feet of hardwood lumber. It owns 6,000 to 8,000 acres of stumpage in Mississippi. A large part of this output is tupelo gum and cypress.

Four more new members have been received by the American Hardwood Manufacturers' Association, as follows: Port Barre Lumber & Tie Company of Port Barre, La.; H. B. Blanks Lumber Company of Vicksburg, Miss.; M. E. Leming, Leming Lumber Company of Cape Girardeau, Mo.; Cybur Lumber Company of Cybur, Miss. This makes a total of fourteen members the association has received who were not identified with either the old gum or oak associations which it succeeded.

Box manufacturers at Memphis are doing the largest business in their history. Indications are that they will continue to operate on this phenomenal scale for quite a while, as they are receiving more orders than they can promptly handle. They are paying the highest prices ever known for low grade cotton wood and gum and are likewise securing higher prices than ever before for their output. There is a scarcity of this class of lumber and the box plants are not able to operate on as full schedule as the managements thereof would like. Orders are having to be turned down almost every day and it is beginning to look as if this unusual demand will continue for the period of the war.

Manufacturers of tight and slack cooperage stock are likewise finding their books unusually full of orders. Wooden containers of every kind have been in extraordinary demand for quite a while, and members of the trade believe that this unusual call will continue indefinitely. Every effort is being made by the manufacturers of cooperage stock, as well as finished barrels, to get together all the material that can be assembled. They are meeting with much difficulty on this score because of the serious shortage of cars. Most of these plants, however, are able to operate on pretty full time now, as the situation is improving from both a weather and transportation standpoint.

Walker Wellford, general manager of the Chickasaw Cooperage Company, has returned from Ft. Arthur, Texas, where the Ft. Arthur Cooperage Company has begun operation of a new finishing plant. Mr. Wellford is president of this new firm.

KNOXVILLE

C. F. Maples of The Maples Lumber Company, was in Cincinnati last week in the interest of his concern and reports a very successful trip.

The Andes Lumber Company has recently closed a big contract for a large amount of pine lumber sold to the government for shipbuilding purposes.

J. M. Logan of J. M. Logan Lumber Company, has just returned from a trip in Alabama where he is operating several mills and reports business very active in all departments.

H. C. Kopcke of the Kimball & Kopcke Company, spent the month of February in Sheffield, Ala., where he went to assist the government in its large work in building the nitrate plant number two at Muscle Shoals.

The Vestal Lumber & Manufacturing Company is filling a government contract and getting out large quantities of dimension oak. Its mill at Fonde, Ky., has been out of logs for a short time and on account of the bad weather had not been running full time but at present is running to capacity.

J. Marion Miller of the Miller Lumber Company, has just closed a trade for a large tract of timber containing some fine oak and poplar which he expects to manufacture in the immediate future. Mr. Miller is

an expert in handling portable saw mills, having had many years experience, and when he manufactures lumber the successful selling of it is assured.

L. H. Shaffer of the L. H. Shaffer Lumber Company, has just purchased a large boundary of timber and expects to operate it at once. He makes a specialty of oak and has a large number of orders booked for future shipments.

Walter McCabe has been busy as usual handling a large block of switch ties and cross ties and reports business very good with his concern.

The last convention held in Cincinnati of the Hardwood Manufacturers' Association was attended by 80 per cent of the Knoxville Lumbermen's Club and the report given by each of the lumbermen who attended was very flattering to the Cincinnati lumbermen who acted as hosts. Walter McCabe said that it was the first convention he had attended and if it was an index of all other conventions he would never be absent from any more.

The Lumbermen's Club of Knoxville holds its regular bi-monthly meetings and has derived much good from the organization and the spirit of co-operation among all the wholesalers in Knoxville was never better than at the present time.

◀ LOUISVILLE ▶

Contracts have been let for rebuilding the burned sections of the plant of Voss Table Company of Louisville, which suffered a fire a few weeks ago, the total damage to that plant and the Embry Box Company, and Embry Lumber Company, running over \$50,000. Contracts have also been let by the Palmer & Hardin Manufacturing Company for rebuilding furniture plant and equipment recently burned in Portland.

The Holly Ridge Lumber Company, Louisville, operating sawmills at Meeker, Monroe and Holly Ridge, La., has purchased an additional band-mill at St. Landry, La., taking over the plant of the Climax Lumber Company, at that point. This mill has a daily capacity of about 50,000 feet, which with that of the other three mills gives the company a fairly large hardwood production capacity. This concern also has a wholesale department at Mobile.

Members of the Louisville Hardwood Club and other lumber and timber interests of the state, as well as the woodworking interests and employers in general, are much relieved over the action taken by the legislature in killing the proposed eight-hour law before the house, which had passed its second reading, and which was becoming of a dangerous nature. A drastic measure of this kind would have greatly handicapped the manufacturers at a time like this, when labor can hardly be obtained at any price.

The Louisville Branch of the Southern Hardwood Traffic Association is planning to secure larger quarters and increase its operating force due to having recently taken in several new members, among whom are the Evansville Band Mill Company and Evansville Veneer Company, Evansville, Ind., and I. B. Wilcox Company of Louisville, with mills at Sunflower, Miss. The Louisville organization held its monthly meeting on March 19, at which time these concerns were accepted.

The Louisville Hardwood Club at its second March meeting, held on March 19, discussed at some length the present government requirements and probable future requirements, which at present are principally for use in wagon, truck and aeroplane manufacturing. It was shown that the thicker stocks of oak, ash, some hickory and poplar are the principal items other than walnut and mahogany which have been in big demand for months. Inspection of hardwoods, and manufacturing stunts on getting the best cuts for thick stocks, were also discussed. Present at this meeting as guests were Mr. Hagerman of the National Veneer & Lumber Company, Indianapolis, and Howard Shedd of the Detroit office of the Holly Ridge Lumber Company.

The Winchester Lumber & Manufacturing Company of Winchester, Ky., recently lost its plant and yard stocks in a fire, which destroyed all of the mill buildings, dry kilns, etc. The loss is placed at \$60,000 to \$70,000, with insurance on the mill of \$25,000. When first discovered the fire was breaking through the roof of the furniture manufacturing plant, but could not be controlled due to shortage of fire equipment, another fire having broken out at the same time in a residence district.

The outlook for sales of hardwood flooring and interior trim is not especially bright at this time, as from all indications building this season will be restricted largely to plant additions, new industrial plants and building of medium priced or cheap residences. So far there has been very little activity shown in the building trades, in spite of good weather, and most of the work that is coming out is for warehouses and plant additions of one kind or another.

That thieves in Louisville have grown overly bold was shown a few days ago at the plant of the Smith Cooperage Company, when a thief entered the office during the noon hour and cleaned out the cash box, while the bookkeeper had stepped out into the plant for a minute or two.

Indications are that several of the recently organized lumber companies and concerns holding timberlands in eastern Kentucky will shortly be in position to start developments, as the coal interests in several districts have managed to get the railroads to start work on new branches, which will open up territories which have been closed in the past. In the Whitesburg district, principally in Letcher county, a number of branch railroads are now being constructed into coal and timberlands.

The traffic situation has become worse instead of better in the Louisville district during the past two weeks, due largely to the general shortage of cars in the South, which has resulted in several of the southern lines, including the Mobile & Ohio, Cotton Belt, Illinois Central and Iron Mountain placing embargoes against their equipment leaving their lines. Shipments from Louisville are managing to get through in fairly good shape, but through shipments from the southern mills are being handled only with great difficulty. A good deal of material at this time is moved to Louisville, the freight paid here, and handled as a new shipment to the East, thus losing on the reconsignment privilege. However, prices have been so good that in some cases the losses could be absorbed.

WISCONSIN

The Menominee Bay Shore Lumber Company, Soperton, Wis., has presented each employe of its saw and planing mills, lumber yard and office with a \$50 Liberty bond and \$10 in cash as a bonus on 1917 wages. The bonus was paid to those who on January 1 had completed three years of continuous service, which includes about one-third of the entire working force.

The McGeoch Estate, West Allis, which is given credit for a large share in the establishment and upbuilding of this big manufacturing suburb of Milwaukee by the erection of residences and workmen's dwellings, has undertaken the construction of fifty new homes and may double this number because of the great demand for housing accommodations. The lumber is being furnished by the Tower-Hubbard Lumber Company, West Allis, and the millwork by the Grobben Manufacturing Company, Milwaukee. During the last ten years the McGeoch interests have built more than 300 homes in West Allis.

The Paine Lumber Company, Oshkosh, considered one of the largest manufacturers of sash and doors in the world, on March 16 distributed the sum of \$32,378.46 on a profit-sharing plan among its employes. The payment was made on the basis of 1917 earnings of all employes in service for more than one year's time. About 900 of the 1,100 employes shared in the distribution. Following the payment, a campaign was conducted among the workmen to invest their dividends in War Savings Stamps.

The Home Builders' Finance Company, Milwaukee, organized with a capital stock of \$100,000 by Milwaukee woodworking and lumber interests, has perfected its organization by the election of these officers: President, Jesse Cappon; first vice-president, George F. Eller; second vice-president, B. F. Hewitt; secretary, H. R. Graham; treasurer, W. B. Osborn; assistant secretary and treasurer, A. J. Obenberger; directors, Stephen Croft, Henry Droegkamp and Edward Schildknecht.

The Menominee River Boom Company, Marinette, at its annual meeting re-elected all officers, including Hon. Isaac Stephenson, who died several days later. The 1917 drive practically completed the active operations of the company. In the largest season, which was in 1889, the company floated 642,137,348 feet of logs down the Menominee. The smallest drive was in 1916, when 15,591,850 feet were brought to the Twin Cities. This was exceeded last year. In 1893 there were twenty-one sawmills on the river, while at present there are but five, and in recent years only three of these received logs by water.

John T. Yule, the last of the coterie of pioneers who established a vast wagon manufacturing industry in southern Wisconsin, died at his home in Kenosha, Wis., on March 16, at the age of 87 years. Mr. Yule was actively engaged in wagon manufacture for more than fifty-five years.

Milwaukee is to have a large aeroplane manufacturing industry, which will use a large amount of the capacity of local woodworking plants, whose business has suffered considerably from the curtailment of building operations. As the result of the efforts of the millwork bureau of the department of manufactures of the Milwaukee County Council of Defense, a movement has been put under way to bring to Milwaukee the Lawson Airplane Corporation of Green Bay, Wis., which needs larger facilities and more capital to handle prospective government contracts. A committee of representative business men of Milwaukee is now engaged in making a canvass with a view to interesting local capital in the Lawson company, the idea being to increase the capital stock from \$200,000 to \$500,000. The Lawson company is to move its plant to Milwaukee and do the assembling work, while local woodworking factories are to manufacture the materials. At this time it appears that the undertaking will be successful.

The Milwaukee County Council of Defense, with the co-operation of about 100 representative manufacturers and merchants, is raising a fund of \$30,000 with which to establish and maintain a bureau in Washington, D. C., to provide Milwaukee and Wisconsin industries with information enabling them to make bids for government contracts. The woodworking industries are especially active in the plan, as they not only have considerable unused capacity available, due to the slackening of new construction and peace-time demands, but feel that Milwaukee has been badly neglected in the distribution of war material contracts. It has been discovered that 75 per cent of all war work has gone to seven eastern states, none of which has resources and industrial facilities equalling those of Wisconsin.

The Wisconsin State Conservation Commission during the past winter logged approximately 100,000 feet of timber in the Peninsular State park in Door county, Wis., under its plan to take 1,000,000 of the 5,000,000 feet of timber in the reservation during the ten-year period ending in 1927.

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

Protest has been made that the logging operations will greatly reduce the natural beauty of the forest, but the commission says that it has made a very careful survey and is cutting out only such timber as will enhance the development of the reserve.

Employees of the James H. Lumber Company, Milwaukee, at its mills and logging camps in Ashland, Wis., and vicinity have pledged themselves to give more than \$4,000 for war relief work during 1917. The city of Ashland recently adopted the "Kenosha plan" of raising funds of this character by appealing for stated pledges among employers and employees alike, rather than to conduct separate campaigns for funds each time certain relief bodies need more money, and already \$40,000 has been made available in Ashland for the remainder of the year.

The Hardwood Market

< CHICAGO >

Added difficulty attends shipment of lumber to and through Chicago, which suffers both because of car difficulties and because of broken mill stocks. Further development has been noted of late in war work and all box interests are working to the utmost to keep pace with demand. The normal factory demand has shown a good deal of activity of late, due to a growing realization that augmented war production by saw and veneer mills and panel plants is gradually cutting down on commercial production.

Speaking of war orders and especially in connection with the controversy over prices for thick oak for war vehicle contracts, a statement giving an interesting angle to the situation comes from a Chicago concern to the effect that it has just sold a considerable block of thick oak at prices demanded by the lumbermen. This gives the true indication of going market.

< BUFFALO >

The hardwood trade is still considerably handicapped by the embargoes existing in many localities, though the demand is reported to be on a fairly large scale. Local manufacturers are taking a good quantity of stock of various kinds and in some directions the railroads are handling lumber better than a few weeks ago. Everything nowadays is wanted for quick delivery and in filling orders the local market has a good advantage, as assortments cover a wide range of stock and cars are as plentiful here as in any other market. Prices are generally strong.

War plants are taking the bulk of the lumber moving, which includes a good proportion of oak, maple and ash, particularly in thick stock. The furniture factories are not taking any large amount of lumber just now and the building outlook is poor. From present indications the carpenters of this city will make demands on April 1 which are regarded by the builders as excessive and they expect a slowing down of building operations. Most all the permits granted here at present are for small work and much of it is for repairs. No large buildings appear to be in sight.

< PITTSBURGH >

Hardwood men are getting busy. The only thing they lack is cars. Inquiry is fine. Mills are cutting a lot of good stock in tri-state territory, but everywhere there is the same complaint about the difficulty in getting shipments. Embargoes and car shortage make delivery of lumber anything but a sure job. The biggest demand in the hardwood line is for oak, not only timbers but also bill stuff. Maple comes next with a big inquiry for this stock from the furniture manufacturers. Chestnut, hickory and ash are splendid sellers. Automobile stocks are less in demand on the average than last year. The prices on all hardwood are very firm and business would be good all along the line if shipments could be made.

< BOSTON >

The noted advances in beech, birch and maple or the hardwoods available in New England and New York state, have now been followed by sudden large increases in other hardwoods. With poplar now selling at nearly the standards of quartered oak a few years ago and inch quartered at ten cents per foot or higher, the whole range of stock in general varieties has become a puzzle for all concerned. Furniture and finish manufacturers admit that their costs will be too high to expect any volume of sale in their products. The willingness of aeroplane constructors to buy anything suitable at any prices involves many kinds of wood even to cherry. This demand being of almost universal circulation has stimulated the whole list to an impracticable point while the determined demand lasts. Transportation is perhaps a little more favorable, barring the setback of two ice storms in New England, and the rumored improvements believed to impend about the first of April, leads the trade to confidence that a little of the "backed up" business will come through the next season. New demand in non-war lines is certainly small as it applies to hardwoods so that a step up in production and flow of deliveries is expected by both dealers and purchasers to quickly reduce previous standards in most items except those specially qualified for government usage as to size and grade. The selective character, or much of the latter

class of inquiry, must be presumed to result in a great accumulation of under grade and undersize production which, having been studied in to many manufacturing operations, will no doubt form a basis for a large volume of business as soon as present limitations are relieved.

< BALTIMORE >

The hardwood market here is much the same as it has been, with no improvement in transportation, so far as can be learned, and with the range of prices largely dependent upon ability to make delivery and the necessities of the buyer. But even the lowest returns are attractive, and the mill men as well as the wholesalers would be entirely willing to book orders if they were only able to make shipment. At intervals the embargo placed on shipments is raised by the railroads, but the time of movement is never long enough or far-reaching enough to do the hardwood trade much good, and as a consequence of the handicaps upon the distribution the business done is of comparatively small volume. Practically all of the dealers here get plenty of inquiries, but they find themselves unable to say when they could fill these orders, which prevents them from booking the business. The mills, of course, are in a better position than they were to carry on operations, and the production is doubtless increased. At the same time it is to be said that the general conditions do not encourage expectations that anything like congestion will result, if not for any other reason, because labor continues scarce, with wages high and relatively few of the plants being operated at their full capacity. The local dealers are quite ready to augment their holdings and do all they can to get in lumber, acting on the belief that the range of prices will remain high or even go to a more advanced level, and that they cannot well lose by preparing for a good demand. The chief problem appears to be that of transportation, which has not yet been brought any closer to a solution than before, even though the weather now favors activities of all kinds. The hardwood men still find it expedient to make readjustments of their line as fast as the need for such readjustments develops, and considerable shifting in the business may be said to have taken place of late. Industries that have been users of hardwoods to a considerable extent are more or less affected by the war situation and encounter a measure of unsettlement. The requirements of some have doubtless been materially curtailed, while others are apparently going along much as before, though the future holds out uncertainties that are not to be calculated with. As for the exports, they continue about at the rate noted of late, and if there has been any increase in the foreign movement it must be attributed mainly, if not solely, to the greater urgency of the needs abroad.

< COLUMBUS >

Strength is the chief feature of the hardwood market in Columbus and central Ohio territory. Buying by both retailers and factories is more active since the warmer weather has arrived and the "backbone" of the winter is broken. Dealers are rather anxious to accumulate some stocks for the spring building season. On the whole the tone of the market is generally satisfactory and future prospects are considered encouraging.

Retail stocks are not large in any section, and consequently orders and inquiries are being received from dealers in larger numbers. Most of the orders are for shipment in the near future, although some are for delivery later on. The worst feature at this time is the slowness in receiving shipments. Some improvement on certain southern railroads is reported, but on the whole there is little to encourage lumbermen in the transportation situation. Some embargoes are still in force and governmental regulations are not helping the general situation to any extent.

Factories making boxes and implements are the best customers at this time. Some buying is also being done by furniture factories, although the volume is not up to the usual records. The policy generally followed by factories is to buy only for the immediate future. Collections are not as good as formerly, although money appears to be easy. The reason given is the demand for cash made by war charities and Liberty loan drives.

Quartered oak is in good demand and prices are advancing. Firsts and seconds are quoted at \$100 at the Ohio river. No. 1 common is quoted at \$68. Plain oak is also moving fairly well and advances aggregating \$2 per thousand have been recently announced. Poplar is strong and the same is true of chestnut and basswood. Other hardwoods are unchanged.

< CLEVELAND >

Not much change is noted in the hardwood markets of this district during the last fortnight. There are few invoices and few cars coming in. Such activity as there is seems to be confined mainly to oak and maple flooring, and contrary to usual conditions at this time of year, there is a weakness in these items, at a time when marked firmness usually is seen. Oak is weaker than other descriptions, mainly because the principal outlet, housing construction, is so far practically closed. Hence absence of real demand. Although there is a slight shading of prices in the wholesale division of this market, the retail prices have not been altered. The margin of profit, owing to increased cost of doing business, seems to be so small, that at the high prices at which the material was purchased, retailers cannot very well let go without sustaining a loss. Other hardwoods are practically stationary here, as the principal outlet always has been for interior finishing of residences and housing generally, and as

there is nothing doing to in that direction, the different descriptions naturally are quiet. It is noted, however, that in the absence of liberal receipts holders are disposed to remain fairly firm in their views as to prices, even though the demand is small at this time.

◀ INDIANAPOLIS ▶

The Indiana hardwood trade is finding it difficult to keep up with the orders for heavy stocks which manufacturers are seeking, this condition prevailing despite an improvement in the transportation situation. The trade as a whole reports the demand very satisfactory, saying that although the demand for thinner stocks is not as heavy as it might be, that it is much better than the trade had reason to expect a few months ago.

The call for ash is exceptionally strong, as several Indiana wood working plants are heavy buyers to fill their orders for government airplane parts. Hickory also is in good demand from vehicle and implement manufacturers, the implement trade especially reporting a heavier trade than had been anticipated. Motor truck manufacturers also are developing into heavy consumers of hardwoods as many of the Indiana factories are working their plants to capacity on war orders.

Gum is in fine demand, especially the cheaper grades for box making. All box making materials are scarce and are bringing top prices. There has been continued improvement in the hardwood manufacturing situation as weather conditions have been more favorable. Although the roads in many parts of Indiana do not permit the hauling of logs, many manufacturers are working their plants to capacity. The call for hardwoods for building purposes is not strong, but it is improving gradually.

◀ EVANSVILLE ▶

Ideal weather conditions that have existed in Evansville and southwestern Indiana during the past two weeks have greatly added to the trade of the hardwood lumber manufacturers in this section. While the car shortage problem is still with them to some extent, the local manufacturers say that conditions have improved a great deal and that they are able to get some cars from time to time and that they are getting in more logs and shipping out more lumber than they were doing two months ago. They say the outlook for summer and fall business is much better than it was a few weeks ago. Most of the uptown mills in Evansville are being operated on full time now, while the river mills remain closed and it is not known when they will start up. One large manufacturing concern here reports that during the past year they have bought up several large tracts of timbered lands in southern Indiana and southern Illinois, and that the log question is not worrying them any, as they are getting all the logs they want from Indiana at the present time. The demand for the best grades of hardwood lumber is very good, and in fact has been for the past several weeks. The demand for the various kinds of lumber needed by the government to manufacture war materials is especially good. Quartered white oak is now moving better than it has for some time past and plain white oak is also in better demand. Hickory, walnut, ash, elm and maple are strong and it is here predicted that gum will show a picking up before long. Prices are holding firm, and in the opinion of the manufacturers they will stiffen from this time on. Most of the wood consuming factories in Evansville are being operated on full time now and the outlook for them is said to be very good. Building operations have picked up some during the past few weeks, yet it is not expected there will be the building here this summer as in former season. Planing mills say trade is only trade, and sash and door men make a similar report. Architects and contractors say there will be some building this summer and that things look better than they did at the beginning of the present year.

◀ MEMPHIS ▶

There is very little complaint on the score of demand for hardwood lumber. In fact the demand is rather larger than can be filled in most items. Selling is about the easiest end of the proposition at the moment and prices are exceptionally well maintained. There is an unusual call for high grade quarter-sawn oak and for thick plain oak, for the lower grades of cotton wood and gum, for ash in all grades and for sap gum and cotton wood in the higher grades. There is not much activity at the moment in No. 1 common plain oak and in firsts and seconds red gum. Box boards in both cotton wood and gum are in very urgent call and prices thereon are exceptionally high. The lower grades of cotton wood and gum are passing freely into the hands of box manufacturers and the demand is in excess of the supply. These items are commanding the highest prices ever known.

Deliveries of lumber are very greatly restricted, especially into Central Freight Association and Eastern Trunk Lines territory. Cars are scarce for the handling of lumber and it is difficult to find open routes even where cars are to be had. Difficulties in this respect appear to be growing rather than decreasing, particularly so far as the territory north of the Ohio and Potomac Rivers and east of the Mississippi is concerned.

Prices are expected by hardwood interests here to continue on a very steady basis because of the excellence of the demand and because of the handicaps surrounding production. Already stocks are much broken and they will be much more so in a short time when the 1,000 or more cars, held up for delivery now, go forward.

The following stock is in excellent condition, ready for immediate shipment

5 1/2"	No. 2	Com. & Btr. ASH.....	41,000'

MIXED ORDERS OUR SPECIALTY

You Can Make No Unsafe Purchase on the Advice of

Lacey & Company

Why? Because we will give you our final advice only on known facts.

If we sell it to you, you can bank on value as represented—because when we don't know we find out.

If you buy it on our advice, it will only be after we know. We shall know because we shall not give our final advice until we have made for you, at your reasonable cost, a LACEY REPORT of such nature as we find the case calls for, a "2 run," a "4 run," or a tree count. Then both you and we will know what is there, and talk of price will then be in order.

< KNOXVILLE >

Car stock and switch ties are in strong demand together with thick oak and poplar, and all grades of quartered white oak are especially sought after. The tone of the market displays much optimism for the future and the best rule to observe is to sell only what you actually have and not contract ahead for the future, for who knows what any day may bring forth.

All the lumbermen in this vicinity are busy getting in stocks of all kinds of lumber from pine to walnut as they see a shortage on lumber cut and a great scarcity of dry stocks in this vicinity. Next month all the farmers will be working in their crops and very little lumber will be made or hauled to the railroad.

< LOUISVILLE >

There has been no material change in the general situation of the local market during the past two weeks. There has been some improvement in the demand for poplar, which is now in general demand for all grades. Boxboards are very active, with poplar veneers somewhat more active, and even 5/16 to 4" stock in good demand. There is a good government demand as well as a good demand from the Allies for such lumber. The principal demand, however, is for thick stocks of oak and ash. Oak is good from 5/4 to 10/4 and up, in firsts and seconds and common plain, while there has been some improvement shown in quartered, which is now being used for aeroplane manufacturing. Ash is good in almost all grades, 8/4 to 16/4 in wide stocks being especially active. There has also been an improved inquiry for 4/4 plain oak, common grades as well as first and seconds not having been very active for the past few weeks, common being especially quiet. However, the government has been asking for prices, and indications are that this item will show improvement shortly. All kinds of veneers and panels are moving, and there has been no let up in the demand for walnut and mahogany. There is also a big demand for cheap dimension stock, principally handle stock, but no one is making much of an attempt to take care of such business just now. Chestnut core stocks for panel manufacturing have been moving fairly free within the past few days, due to the high price and scarcity of poplar. A good deal of gum is also being used. All low grades are moving freely, due largely to the general activity shown by the box manufacturers, most of which have heavy government orders.

< ST. LOUIS >

There has been but little change in the hardwood situation recently. Some of the principal woods, however, are in better demand. Thick oak is in particularly good request and there has been a better movement of the item lately. Gum, and ash and also cottonwood are selling fairly well. Business is interfered with very materially because of the car situation. A marked improvement is looked for in the next few weeks, just as soon as the transportation becomes easier. There is rather a light call for cypress and up to the present time, it has not been at all satisfactory but signs of a betterment are in evidence. Increased inquiries are coming in. Prices are strong on every item and it does not look as if there would be any easing up.

< ASHEVILLE >

The embargo situation on eastern shipments has greatly improved within the past week and many crews are moving from this territory to eastern markets. Ten days ago the transportation problem was still serious. Permits are being issued reasonably freely, and with good weather to aid, the mills are preparing for a brisk trade.

< MILWAUKEE >

The northern logging and lumbering industry is in the throes of what is believed to be the worst traffic congestion and car shortage that has ever been experienced, and it is estimated that during the last two weeks alone shipments from northern mills have been reduced nearly 50 per cent because of the lack of rolling stock. Yards are piled full of lumber awaiting loading, but so far sawing operations have not been materially reduced. However, unless relief is given by a more adequate car supply within a short time, it is believed a serious effect will result.

Logging operations are gradually coming to an end throughout northern Wisconsin and upper Michigan. A severe snowstorm which struck northeastern Wisconsin ten days ago proved to be at once a disadvantage and a benefit. It congested traffic to a serious degree, but it provided the means whereby logging operators will be able to extend their season somewhat longer than they had hoped for when soft weather made its appearance a short time ago.

Hardwood prices are firmer and all factors are such that a strengthening of the entire list may be expected. The demand for lumber is far greater than the available supply during the remainder of the year. The supply has been produced at an operating cost ranging all the way from 20 to 30 per cent higher than ever before. Every foot of hardwood lumber that the North can produce until the end of 1918 is, for all practical purposes, already spoken for. Representative men in the industry say that under existing conditions they cannot expect to see even a small surplus.

NORTHERN MANUFACTURERS**Ahnapee Veneer & Seating Co.**

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
 VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany & Qtd.-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

THE GOLDEN RULE

Michigan Hardwoods

Cadillac Quality

Nature has been generous in supplying Cadillac an abundant supply of superior timber and we are supplementing her work with the best methods of manufacture.

This has made Cadillac Quality famous.

Good timber, lumber well manufactured and seasoned, grades that are reliable and not blended to meet price competition, punctual service; — these are the elements of Cadillac Quality.

We sell direct to responsible dealers and manufacturers.

HELENA

ARKANSAS

THE J. V. Stimson Hardwood Company of Helena is one of the five units of the Stimson organization founded by J. V. Stimson of Huntingburg, Ind. The J. V. Stimson Hardwood Company operates two band mill plants, the other being at Memphis. The directing genius of this organization is Ben Katterhenry, who hails from Huntingburg and has been identified with the Stimson interests for some time. Mr. Katterhenry has made an unusual record for economical and efficient manufacture, and is generally considered one of the ablest operators in the hardwood belt. He is an officer of and part owner of this branch of the Stimson operations.

The J. V. Stimson Hardwood Company is operating on a splendid tract of its own timber and is cutting the usual line of Southern hardwoods. The company is noted for its foresight in anticipating markets and for the quality of its product. The result is that both the big mills are kept on the jump, Mr. Katterhenry dividing his time between Helena and Memphis.

Integrity Quality Service Efficiency

It is these vital sparks of industry that are keeping the lights burning and the wheels humming at Helena. It was the steadfast adherence to these principles that has made Helena the greatest producing center of Hardwoods and Hardwood Veneers west of the Mississippi river.

The satisfaction of profitable trade binds our customers to us. From all Hardwood consumers who appreciate a product in which these qualities are inherent, we respectfully solicit correspondence.

Watch the present market for oak—it's getting stronger every day. Time to stock up!

It would not make much difference so far as the song is concerned, but it would satisfy some people's curiosity if the matter could be settled whether the "Old Oaken Bucket" was made of white oak or of red oak.

We have for fall shipment large stock of 10/4 and 12/4 C. & Bet. Oak; other thicknesses from 4/4 to 8/4 in all grades.

FARRIS HARDWOOD LUMBER CO.,
Manufacturer, Nashville, TENNESSEE

The oldest piece of oak shaped by human hands is believed to be an oak canoe discovered a few years ago buried in mud at the bottom of a river in England, and believed to be 3,000 years old.

For 25 years we have made Oak and still specialize in this, the best of American hardwoods. Our prices, grades and service are worth considering.

LOVE, BOYD & CO.,
Manufacturer, Nashville, TENNESSEE

No other wood of the United States is as suitable for quarter sawing as white oak. Some of the red oaks measure fairly well up to white oak in that respect, but as a general proposition they fall considerably below it.

For anything in OAK write these representative firms

QUARTERED OAK OUR SPECIALTY

Memphis Band Mill Company

Manufacturer, Memphis TENNESSEE

Practically all the oak cut in Europe, west of Russia and the Balkans, belongs to a single species, though the qualities of the wood from various regions differ greatly and bear different names.

Oak is just as ornamental today as it was useful five centuries ago—just as useful today as it was ornamental then.

The Mowbray & Robinson Company
Cincinnati, Ohio
Manufacturers of Hardwood Lumber and Flooring

North Vernon Lumber Company
North Vernon, INDIANA
Manufacturer

Everyone KNOWS what OAK is; that is why it is so easy to sell Oak goods.

There will always be a market for all the Oak our sawmills have any right to cut.

There are eight evergreen oaks in the United States, more than half of which are confined to the region west of the Rocky Mountains. Not one of them possesses much value as a source of lumber.

Charles H. Barnaby
Manufacturers of Band Sawn Hardwood Lumber and Veneers
Greencastle, Ind.

No one should fancy that the "peach oak" bears peaches. It was given that name because its leaves are shaped like those of a peach tree. It is likewise called willow oak, because the foliage resembles that of willow.

SWAIN-ROACH LUMBER CO.
Seymour, INDIANA
Manufacturer

J. V. Stimson
Manufacturer and Wholesaler Hardwood Lumber
Huntingburg, Indiana

The oldest oak tree still standing (if tradition is true) is known as Abraham's oak, near Jerusalem. If the patriarch Abraham ever camped in its shade, as the story goes, the event must have occurred 4,000 years ago.

No wood is more susceptible to the fuming process than oak, and both red and white oak are suitable for this process.

Miller Lumber Company
Manufacturer and Dealer in All Kinds of Hardwood Lumber
Marianna, Arkansas

W. P. Brown & Sons Lumber Co.
9 Band Mills manufacturing hardwoods
Louisville, Ky.

Edgar Lumber Company
Wesson, Arkansas
Band Sawn, Steam Dried, Arkansas Hardwoods

When artists of the Middle Ages chose a wood for high class carving, such as cathedral doors, altars, and architecture, they almost invariably selected oak.

Salt Lick Lumber Company
Hardwood Manufacturer
Salt Lick, Kentucky

J. W. Wheeler & Co.
Manufacturers Band Sawn Hardwood Lumber and Quartered Oak, Ash and Gum
Memphis, Tennessee

Manufacturers of staves for barrels intended to contain alcoholic liquors prefer white oak to red for the reason that the wood of the former permits less seepage than red oak.

Our Lumber is Well Manufactured and Well Taken Care of. Write us for prices in anything in hardwoods.
THE FERD BRENNER LUMBER COMPANY,
Alexandria, LOUISIANA

Little Rock Lumber & Mfg. Co.
Plain and Quarter-Sawn Oak a Specialty
Maker of Band Sawn Hardwoods
Little Rock, Arkansas

The value of oak cross-ties in the tracks of railroads has long been understood by engineers. They give the best service because the wood is hard and wears well and holds spikes well and resists decay.

For anything in OAK write these representative firms

We Manufacture Hardwood Lumber

The oak tree under which John Wesley preached his first sermon in America still stands in Georgia and is an object of great interest to tourists. It is the common southern live oak.

ALEXANDER BROTHERS,
Manufacturers, Belzoni, MISSISSIPPI
B—We specialize in White and Red Oak and in Quartered Red Gum. We solicit your inquiries.

Factories in the United States use approximately two billion feet of oak yearly, which is about 65 per cent of the total sawmill production of this wood.

Yellow oak is the best named of all the oaks. The inner bark is yellow and was a reliable dye material in pioneer times, and it might be worth while to investigate it now, in these days of scarcity in the dye market.

All stock cut from our Virgin Timber on modern hand mills.
THISTLETHWAITE LUMBER COMPANY,
Washington, LOUISIANA
Manufacturer

Tallahatchie Lumber Company
Manufacturers of Band Sawn Hardwoods
Philipp, Mississippi

Poets have written of oaks a thousand years old, but there does not seem to be an authentic record of an age of more than 700 years for an oak, based on a count of the annual growth rings.

Band Sawn, Equalized, Forked Leaf White Oak Thin Oak and Ash Specialties

It has been found out that the famous "Charter Oak" which stood near Hartford, Conn., and which figured so prominently in the early history of New England, was white oak.

HOLLY RIDGE LUMBER CO.
Louisville, KENTUCKY
Manufacturer
70% 14 and 16' long Band Sawn Plain Red Oak.

The cow oak is one of the most valuable hardwoods of the South, and belongs to the white oak group. Its acorns are large, thin shelled, and sweet, and cattle like to eat them.

Hyde Lumber Company
South Bend, Indiana
Band Mills: Arkansas City, Ark. Lake Providence, La.

Colfax Hardwood Lumber Co.
Louisiana
Manufacturer Band Sawn Southern Hardwoods
Colfax, Grant Parish

The manufacturers of plows have long shown preference for oak for the handles. The wood is strong, is easy to bend in the proper form when steamed, and holds that form ever after.

Carrier Lumber & Mfg. Co., Inc.
Sardis, Miss.
Kiln Dried Stocks a Specialty
Manufacturer

The hardness of oaks vary as much as 50 per cent when they are compared among themselves, and there is no less difference among different species when their strength is under consideration.

TRY KNOXVILLE TENNESSEE

You can logically do so because you must ultimately depend more and more on this region for your hardwoods.

No higher type of timber can grow than that abounding in eastern Tennessee. It is found on a soil and in an environment which put quality in the trees generations ago. It is our task merely to see that this quality is utilized to the utmost in making the boards you buy. The best of equipment and highly trained organizations working in one place for years at a stretch make that task easy.

Then too you can be sure of getting the best possible service—always.

Ask about it from any of the following:

The Vestal Lumber & Mfg. Co., Knoxville, Tenn., & Fonde, Ky.

The J. M. Logan Lumber Company, Knoxville, Tenn.

The Little River Lumber Company, Townsend, Tenn.

The Babcock Lumber & Land Company, Marysville, Tenn.

(Main Office: Pittsburgh, Pa.)

OAK, POPLAR, MAPLE

Walnut, Chestnut, Hickory, Cedar, Ash, Basswood, Beech

MEMPHIS TENNESSEE

THE WONDER CITY OF HARDWOOD PRODUCTION

The Common Chair

The common chair, that is, the dining room chair, kitchen chair, or the chair that serves in halls where permanent seats are not wanted, fills a pretty large place in the woodworking industries of this country. The annual demand for wood in the manufacture of chairs of that class is not much under 300,000,000 feet, board measure, a year. Such chairs are not usually listed as furniture in statistics, but are kept separate. Factories which make them do not, as a rule, make many other kinds of furniture, and it is easy, for that reason, to keep them in a class to themselves.

Such chairs are of hardwoods in most instances, and perhaps oak leads all other woods, though maple, hickory, elm, beech, birch and several others are used. Strength is wanted, and weight is not objectionable. In fact, a heavy chair is sometimes preferred to a light one, because many persons associate weight with class and quality in chairs.

Some sawmills specialize in chair stock. They are equipped with machines for producing small squares and other pieces in the rough. These are sent to central factories where they are finished, ready to be assembled in chairs. Sometimes a chair mill works up what was left by a regular sawmill formerly occupying the same site.

Review and Outlook

General Market Conditions

WAR WORK has come to still further dominate lumber markets. This fact in itself is not more important than is the further fact that lumber makers and lumber users fully realize the bearing which direct and indirect war needs are having on markets as a whole. The psychological effect of the growing mobilization of wood producing and woodworking industries, of course, takes a different angle in the two cases. The position of the lumber producer is strengthened because he sees an assured market unaffected, in so far as its requirements are concerned, by conditions of supply and demand. He knows that Uncle Sam will buy, and if he is shown what a fair price should be and that figure is properly supported, the price at which he will purchase will be eminently fair to the producer. He knows that the demand and the price will not be fluctuating and that his goods will be converted into cash through expedited movement of government purchases.

On the other hand, the consumer who does not hold government contracts or sub-contracts is greatly concerned over his future supply of lumber and is now endeavoring both to avoid purchasing too far ahead and at the same time cover himself on needed materials.

The tendency which war work is taking is illustrated by two developments of recent date; one, voluntary, though probably inspired, action by manufacturers of pianos and musical instruments, who agreed to curtail production by thirty per cent as a starter, the announced reason being the switching of that large producing capacity to war work. On the other hand, manufacturers of mahogany and walnut are requested to refrain from turning into commercial veneers such mahogany or walnut logs or flitches as would be suitable for airplane or gunstock work. The idea behind this suggestion, which in effect is an order, is not that there is not sufficient walnut stumpage, but is, rather, recognition of the difficulties attending getting out walnut logs and importing mahogany logs. In other words, the implied contention is that every available facility for manufacturing war materials of these woods should be turned to that one purpose, in order to speed up such production to the utmost. This does not mean that such veneers will be out of the market, as there is a good deal of such wood, particularly in walnut and in some of the varieties of mahogany, which is not suitable for any war purpose. Walnut and mahogany are exceedingly good property.

In the domestic lumber lines production of direct and indirect war materials has assumed such growing proportions that the manufacture of the strictly commercial grades and thicknesses is not any longer of sufficient significance to seriously affect the general

market. Woodworking factories of which the furniture plants are typical are, though, buying a good deal of lumber, and retail furniture conventions of late have brought out sentiment indicating that the furniture demand is going to keep up in good proportions. The population as a whole seems to still have sufficient money wherewith to purchase needed furniture and the probability is that good sales will continue. The branch of the furniture business which has the greatest cause for concern is the dealer, as the future holds the probability of shortage rather than surplus, as the factory will be turned over either in part or altogether to war production. Thus this market for hardwoods and veneers will be conserved even though the quantity of furniture and similar products turned out is reduced. This is not merely a surmise of the future, but is a statement of the situation as it is now actually developing.

The hardwood trade should not anticipate too much of direct benefit for that branch of the lumber business as a result of Secretary McAdoo's explanation of his famous anti-building statement. Mr. McAdoo explains that he is opposed to the erection only of luxurious structures and those built purely to give pleasure. Thus this real damper on building construction is removed, but as the luxurious dwelling and that erected as a permanent home for the owner have shown the greatest proportionate demand in comparison with other buildings for hardwoods, Secretary McAdoo's modifications of his anti-building prediction is not of so much direct significance from a hardwood standpoint.

HARDWOOD RECORD has prophesied, though, that apartment and residence construction in the large cities would be resumed in spite of great increased cost. This prediction is supported rather than weakened by developments of late. The spring renting season in all of the big centers found a total absence of new construction. Rents have climbed to a point where building, even on the present basis of cost, would be profitable, and this fact, coupled with the more significant fact that new building is sorely needed, means that the economic ban on apartment house and residence construction must gradually be lifted even though its removal is but partial. It must be remembered also, that even though hardwoods do not enter so largely into the type of construction which Mr. McAdoo is in favor of, the turning of that much of the building lumber supply into such types of construction must of necessity leave room for a certain proportion of hardwoods to be used where that quantity of softwood otherwise would go. In other words, there is an inter-relationship throughout the lumber business as a result of which conditions in one line must of necessity have a direct bearing on conditions in all other lines. That there must be a pronounced stimulus in building in this country in the very near future is everywhere granted. Such activity is an economic necessity,

not only in urban districts, but in agricultural sections where accelerated production must be accompanied by increased facilities for planting, tending and harvesting and storing crops.

No matter in what direction one looks in analyzing the present lumber situation, war work either in its immediate or its indirect form stands out most prominently and really dictates the situation.

Plenty of Timber

NO ONE HAS ANY EXCUSE for entertaining doubts or misgivings on the subject of the timber supply and our war needs. Every necessary need along that line can be met, provided proper steps are taken to procure, prepare and use what our forests contain. The alarm was sounded that there was not enough southern yellow pine for ships, but it has been shown that there is no lack and can be none, no matter how long the war may last. Three hundred billion feet of this pine would not equal what is available in the South leaving a lot of small stuff out of the count entirely.

The next alarm was on the subject of spruce for airplanes. Somebody was afraid there was not enough to go round, and pessimistic reports spread everywhere. That also proved to be a false cry. It did not take long to prove that spruce was available in abundance, and that no possible prolongation of the war could use it all up.

By the time the apparition of a spruce famine had been laid, another scare had been hatched. This time it was on the subject of oak for vehicles. Somebody was afraid there might not be enough for the wagons and gun carriages needed by the government; and the fear found plenty of people ready to take it up and pass it along.

The oak alarm has no more basis than had that concerning spruce, or the other regarding southern pine. If the war should be protracted to the length of the siege of Troy, there would be plenty of good American oak to make every wheeled vehicle needed, and abundance to spare. Elsewhere in this issue of *HARDWOOD RECORD*, figures are quoted from government reports, showing that at least two hundred billion feet of commercial oak is standing in American forests today. That is more than can be cut and used in forty years, war or no war. An alarm on the oak question is inexcusable, for the facts may easily be ascertained by any one who will take the trouble to consult the 1913 report on the timber stand, compiled by the Bureau of Corporations at Washington. *HARDWOOD RECORD* published an exhaustive review of that report at the time, and other lumber journals did the same; and this paper has since then, more than once, referred to the figures. But it seems that people soon forget.

There is one phase of the matter that ought to be borne in mind: timber in the woods cannot be used for ships, airplanes or vehicles unless it is manufactured, and in order to secure its manufacture, the necessary costs and a reasonable profit must be forthcoming. Although lumbermen are at least as patriotic as any other class of citizens, they cannot be expected to produce lumber on a large scale at a loss to themselves. Possibly the government has overlooked that fact in some of its efforts to procure timber. An arbitrary price may be fixed below cost; and when the material does not move, the circumstance may be used as proof that there is no timber of that particular kind.

No one knows the cost of logging, sawing and transportation better than the lumbermen themselves, and they are the best judges of reasonable prices of their own product. If some one else guesses at the cost, and guesses too low, it is no matter for surprise that the material is not forthcoming; neither is it any proof that there is a scarcity of that particular commodity.

Few costs are harder to reduce to an average than the cost of lumbering, because scarcely any two regions have similar conditions. What would hold true in one locality would be no criterion elsewhere. For that reason, a cost sheet prepared for one set of conditions would have to be revised if applied elsewhere. Julius Cæsar on one occasion wrote: "I need men or money: give me money and I will get the men." This applies fairly well today with the government's timber requirements. The government has

been furnished the necessary money, and if it will use it, it can get all the timber it needs, and get it without paying one dollar more than a fair price.

Showdown on Wagon Oak

ELSEWHERE IN THIS ISSUE is a complete expose of attempted profiteering by government wagon contractors. The plan under which the vehicle interests hoped to squeeze some 30 per cent of additional profit from raw material purchases is a new form of war graft. Possibly the consciences of the profiteersmen is eased by the feeling that they were not planning to take the dollars out of the pockets of Uncle Sam, as did wartime grafters before them. Rather in their fervor of camouflaged patriotism they were merely striking a shrewd bargain, in behalf of our government of course, such as might come up in the ordinary course of raw material purchases.

The man who through his knowledge of human nature, his keenness and his insight into affairs is able to buy below market quotations shows he is a good business man. But in this case as the report very clearly proves the results, in cheaper prices sought, were not to be obtained by legitimate business strategy. Rather, they were sought through deliberately dishonest representation to the government which, had the plans worked out as contemplated, would have forced government action compelling the lumbermen, in effect, to pay the wagon contractors an added profit on each wagon manufactured, equivalent to twenty-five or thirty per cent of the real worth of raw material involved. It is a safe assertion that the additional rakeoff would apply to farm wagons also, as surely no one would think the wagon people so foolish as to pay more money for the same kind of lumber just because it was going into commercial work? Certainly not, especially when the lumbermen were so anxious to help speed up production that they never even knew where the lumber was going!

Let it be emphasized here that the lumber committee which succeeded in unearthing the unsavory facts positively declined to make any comments on the situation. The thing, however, was too big to remain under cover. Let it be also emphasized that the vehicle woodstock committee through its cleverly arranged plans attempted to pull the wool over the eyes of everybody concerned, including Uncle Sam's agents in charge of wagon production. It attempted to get away with its dishonest plan by posing before the government officials as guardian of the public treasury—as a sort of a vigilante committee which would see to it that avaricious lumbermen did not realize the exorbitant profits they coveted. Their plan was so cleverly laid that they actually succeeded in having placed upon their arbitrary dictatorship the stamp of officialdom. Uncle Sam was unwittingly made to place his authority on their attempts to force an added profit on raw material in addition to the profit they were to get on their contracts.

The whole procedure is a disgusting example of corporation greed. The most disheartening side is that were the lumbermen through their straightforward efforts not able to force the other man's cards on the table with their own, the vehicle people would have caused unending delay in the wagon construction program by declining lumber purchases except on the basis of the confiscatory prices which they named themselves. They would have done this in the face of the confidence reposed in the committee by the government.

As the matter now stands, contracts for wagon oak will no longer be subject to the dictation of the autocratic vehicle committee, and prices will be as named by the vehicle makers as their cost of raw material in their quotations on government bids. It still remains to be shown though, just how the committee succeeded in having two sets of prices written in the government records.

A large percentage of planing mill men seem to think any man can file a bench saw, and if a saw will saw, it is enough. Nothing is more erroneous and foolish. A bench saw, to do good work, must, in the first place, be round. Please remember that. If spring set is used, see to it that every tooth comes out to the gage; and, furthermore, be careful to keep the outer points clean and sharp.

Sensational Expose by Oak Men

Memphis Committee Proves Attempt to Profit at Expense of Lumbermen

Members of the American Hardwood Manufacturers' Association have their hats off to R. L. Jurden, John M. Pritchard and John W. McClure, members of the special committee who went to Washington to investigate certain phases of the vehicle contracts, for the manner in which they brought about disclosure of the actual prices used by the vehicle manufacturers as the basis of the cost of their materials when they secured these contracts from the government; also for the manner in which they successfully resisted all efforts of those directly interested in the vehicle contracts to create the impression that there was virtually no difference between the prices offered the lumbermen for thick oak plank and the prices which these interests used as the basis for securing the contracts in question.

The committee, immediately following its return to Memphis, issued its report and this was published in pamphlet form and distributed to all members of the association. Neither the committee nor officials of the association have given out any statement whatever for publication. But the report has been widely distributed and has become public property, with the result that it is available for disclosure of the principal features thereof without any violation of confidence or of the pledge of the committee made to Senator McKellar of Tennessee in regard thereto.

Stock in the association has risen rapidly on the basis of this accomplishment, and there is a rapid growth in membership in progress because of this very definite and very substantial victory on the part of the committee, which received invaluable aid from United States Senator K. D. McKellar, and which likewise received unflinching courtesy and consideration from Acting Quartermaster General George W. Goethals.

The overshadowing feature of the report is the prices of materials, certified to by Colonel W. S. Wood, as "a true copy of the approved cost lists submitted to the Quartermaster General of the army for establishing prices on escort wagons." The prices of materials, as thus certified, are given herewith:

Nov. 26, 1917.

PRICES OF MATERIALS

Single trees	\$.16
1" oak 6" and up.....	80.00
1" oak 10" and up.....	85.00
2" oak, 1sts and 2nds.....	95.00

I hereby certify that this is a true copy of the approved cost lists submitted to the Quartermaster General of the army for establishing prices on escort wagons. This extract consists of six pages.

(Signed) W. S. Wood,
Colonel Q. M. Corps N. A.

J. M. Bech.

Before the committee reached Washington, General Goethals had addressed a letter, under date of March 8, to Senator McKellar, as follows:

"Referring to your call on March 5, with Mr. Ewing, I beg to advise as follows:

Certain prices were fixed for completed wagons and wheels, and in arriving at these prices to be paid for the finished product, the following prices of raw materials were fixed:

Red and white oak, grass green planks, Chicago delivery:

	Per M.
2 1/4" to 3 1/4", firsts and seconds.....	\$80
No. 1 common.....	60
3" and 4", firsts and seconds.....	85
No. 1 common.....	65

The above prices were increased by \$20 per M for dry stock of twelve to eighteen months; \$30 per M for dry stock of eighteen to twenty-four months, and \$40 per M for dry stock of twenty-four months, or over.

The foregoing prices will be for all raw materials unless specific contracts were entered into by wagon manufacturers, in which case the contracts themselves will govern.

I do not know Mr. Ewing's address. Please send him the enclosed copy of this letter and oblige.

Yours very truly,

(Signed) GEO. W. GOETHALS,

Acting Quartermaster General.

GWG—MW.

The committee in its report made the following notation:

You will observe that these prices covering red and white oak, grass green plank, are based on Chicago delivery and that the prices given are identically those prices fixed by the wagon and vehicle purchasing committee to be paid by the vehicle manufacturers for these items, and this is confirmed by the "confidential" price list issued by the wagon and vehicle purchasing committee, effective December 20, 1917, which list was sent to its members for their "confidential" use. The committee then quoted, in its report, the entire list of these "confidential" prices.

The committee was under the impression that the prices named by General Goethals in the foregoing communication were "those prices that the vehicle manufacturers had used as their costs in securing government contracts." It had certain information, however, which led it to believe these prices were not the prices used as the costs of the vehicle manufacturers in securing contracts and that General Goethals, in writing the letter to Senator McKellar, "was laboring under a misapprehension or did not have the correct information."

The committee therefore called on General Goethals, in company with Senator McKellar on the morning of March 19, and told him that his letter of March 8, in so far as it pertained to "the cancellation of contracts" was satisfactory to the lumbermen, but that some of the vehicle manufacturers who had contracts at specific prices felt that "they should have a specific order from the Quartermaster General permitting them to carry out and execute these contracts." General Goethals thereupon, according to the committee, dictated a letter, under date of March 18, to one of the vehicle manufacturers (whose name was omitted) who had entered into contracts for large amounts of green oak plank and had later attempted to cancel such contracts, stating as his reason "that the prices paid or contracted were in excess of the prices fixed by the wagon and vehicle purchasing committee and in excess of the prices which he was allowed to pay." The last paragraph of this letter is quoted herewith:

We are not authorized to fix prices for the wood which enters into the manufacture of the wagons, and you were not authorized, so far as this department is concerned, to press upon the producers a lower price than that named in your specific contract, and in good faith your contract should be carried out and the prices named there should be paid for the raw material."

Yours very truly,

(Signed) GEORGE W. GOETHALS,

Acting Quartermaster General.

The committee made this notation "You will therefore observe that this definitely settles the question as to the right of any vehicle manufacturer to cancel existing contracts or the right of the wagon and vehicle purchasing committee to, in any manner, interfere with existing contracts."

In this connection it will be recalled by readers of the Hardwood Record that the Mississippi Valley hardwood manufacturers and the members of the Lumbermen's Club of Memphis, early in this controversy, adopted resolutions in which they charged that a

prominent firm in Memphis had cancelled contracts for green oak plank at the alleged instigation of the so-called "vehicle committee," and in which they roundly scored that body for its alleged interference in such contracts.

The committee assured General Goethals of its complete satisfaction with his ruling that "the price to be paid for raw materials by vehicle manufacturers was the price which the wagon manufacturers had used as their cost in obtaining government contracts," and advised him that the lumbermen were willing to accept that price. It informed this official, however, that it felt "that the figures for 2 1/4 to 4-inch FAS and No. 1 common red and white oak green plank delivered on Chicago rate, as given in his letter of March 8 to Senator McKellar, were not the figures used by the vehicle manufacturers as their cost in obtaining their wagon contracts."

General Goethals thereupon voluntarily gave the committee authority to examine the original records and satisfy itself as to the correctness of the prices and dictated a letter to Col. W. S. Wood, depot quartermaster at Jeffersonville, Ind., who was in Washington at the branch office opened by him, instructing him to "please let Messrs. Pritchard, McClure and Jurden have access to all figures furnished by the manufacturers for the finished products."

The committee called on Colonel Wood and presented its memorandum from General Goethals. Its investigation of the files developed the fact that "different prices from those stated in General Goethal's letter of March 8 to Senator McKellar had been used by the vehicle manufacturers as their cost of raw materials in obtaining their contracts."

The committee then gave a copy of "prices for materials," already quoted, "as used by vehicle manufacturers as of Nov. 26, 1917, as their costs." The committee made the explanation, however, that "this list of prices on raw materials does not state, neither did the original copy in the file show, whether or not these prices were f. o. b. mill or f. o. b. wagon factories; neither did the original files show whether or not the prices were for green or dry materials."

A. B. Thielens was present at the interview in Colonel Wood's office and, upon direct question, stated "that the prices certified to by Colonel Wood were based on Chicago rate of delivery," and also stated specifically "that they were intended to cover 'partially dry' stock."

A conference was arranged with General Goethals after the committee had obtained the list certified to by Colonel Wood and the latter was called into the meeting. General Goethals asked Colonel Wood to explain the difference in the two lists of prices—the one contained in his letter of the eighth and the one contained in the list that he had himself certified as correct. Colonel Wood suggested that General Goethals had copied the wrong list from the confidential information furnished him by Colonel Wood.

Following this conference General Goethals told the committee he would write another letter to Senator McKellar. This he did under date of March 22. Copy of the letter is given in the report of the committee, as follows

Washington, March 22, 1918.

Hon. K. D. McKellar,
United States Senate.
My dear Senator McKellar:

Referring further to the prices for the raw materials entering in the construction of vehicles, I append hereto the prices which will govern for the raw materials.

I regret exceedingly the discovery of the misinformation on which my letter to you, to be transmitted to Mr. Ewing, was based.

Your sincerely,

(Signed) GEO. W. GOETHALS,
Acting Quartermaster General.

Attached to this letter was the certified list prepared by Colonel Wood of Nov. 26, 1917.

While the committee was making every effort to unearth the cost figures actually used by the vehicle manufacturers, Mr. Thielens tried, in the presence of General Goethals, to make it appear that the two different lists used in the two letters written by that official

were the same. He was flatly contradicted by General Goethals, according to the committee.

The committee, following the receipt of the last letter of General Goethals, prepared to return to Memphis, but it was advised by W. E. Chamberlain, hardwood expert on the staff of Col. R. H. Downman, director of lumber, that he had received a call from E. E. Parsonage, attached to the vehicle section of the war industries board, and that the latter wished a conference with the committee, with a view to negotiations leading to a satisfactory adjustment of the matters in controversy. The committee advised Mr. Parsonage that it was ready and willing to enter into such negotiations, that it desired to be wholly fair and that it wished to make a sincere effort to reach a satisfactory solution. It further advised him that "if such a conclusion could be reached, it would gladly recommend to the hardwood industry the adoption of such an agreement and could assure him of the whole-hearted support and co-operation of the hardwood industry."

Mr. Parsonage then, according to the report of the committee, admitted that the "prices used by the vehicle manufacturers as contained in the list certified to by Colonel Wood were the prices which the vehicle manufacturers had represented to the government would be their cost of such raw materials." He qualified this, however, by saying that "it was understood that these prices were for stock twenty-four months or older, or kiln-dried, ready for factory use."

The committee immediately recalled the statement of A. B. Thielens, already quoted, that these prices were for "partially dry" stock, and called attention of the members of the association, in its report, to the direct contradiction between the statements of Mr. Parsonage and Mr. Thielens.

In addition to giving the certified list of cost prices, Colonel Wood attached several extracts from correspondence between his office and the wagon and vehicle purchasing committee, from which it was made clear that "the dry materials for the wagons were not in stock," that the "materials were then in the growing trees," that the contractors did not have sufficient kiln capacity and that a recommendation was made that the cost of additional kilns to be erected should be equally divided between the contractors and the government. These were quoted in the report of the committee, and the latter added, in this connection: "The files show that this recommendation was approved and that an allowance of \$10 per wagon was granted to the contractors on those specific contracts."

It also added the following: "Your committee therefore is not willing to accept the mere statement that the differential in price is due to the twenty-four-months' old or dryer stock or kiln-dried stock, and feels that it is not in position to accept such a statement, and will only do so upon concrete evidence being presented from the original figures filed with the government showing this to be so."

The report concludes thus:

Your committee has the recommendation to make that the members of this association devote every energy toward any problem that has for its purpose the successful prosecution of the war, and your committee has advised the wagon and vehicle purchasing committee that the members of this association vie with all American citizens in patriotism, in high-purpose and in willingness to make sacrifice, but certainly there is no reason why the producers of a raw material should furnish same to a contract at a less price than the contractor has figured as his cost.

General Goethals has made his ruling on this theory. It is our further idea that, if the hardwood producer is to receive a less price for his material than that price used by the vehicle contractor, then the difference between these prices should accrue to the government and not to the vehicle manufacturer."

Further developments in this matter will be promptly placed before the membership.

Effect of Demand for Cars

Where a shipper of lumber makes a demand upon a railway company for cars, it will be presumed, in the absence of a showing of mutual understanding to the contrary, that the cars were intended to be furnished at the station where the demand was made, and the company will not be permitted to escape liability for failing to furnish them because no place was specified.

Occurrences at Washington Interesting to Lumbermen

Personal Mention and the Activities of Various Boards and Committees

Southern hardwood lumber manufacturers and the vehicle makers who have government war contracts show signs of getting together. Their representatives have had conferences here at the request of the vehicle men, and members of both parties went home to consult their principals and submit further data. The result is said to be that the controversy between the two groups has simmered down to the question whether the spread between prices on green vehicle stock quoted by the southern hardwood men to the vehicle men and the prices which the latter are said to have expected to pay for ready-to-use stock at Chicago.

C. H. Worcester of Chicago and Walter E. Chamberlin of Boston, hardwood experts advising Charles Edgar, the new director of lumber under the Council of National Defense, have been and are in touch with both sides to the controversy and are hopeful that it will be settled.

So far the hardwood men have gained two points, possibly more. One was to obtain from vehicle manufacturers the figures on the cost of vehicle stock, especially oak, which were said to have been used as the basis of the government contract prices for the vehicles. Another was to secure reinstatement of the Kelsey Wheel Company order for 7,000,000 feet of vehicle stock, which order was sought to be canceled through the influence of certain influential vehicle interests.

The vehicle people are stated to have been negotiating with the Northern Hardwood Emergency Bureau regarding vehicle materials. The prices each side is said to have given to the other are understood not to have been satisfactory.

Hardwood lumbermen say that the ordnance bureau has adopted a poor policy of declining to give regular recognition to birch lumber as material for gunstocks. The department demands birch occasionally as a temporary substitute for walnut gunstock material when the latter becomes scarce, but it does not give the birch manufacturers an opportunity to cut stock to meet the ordnance requirements. The result is illustrated by the fact that recently, in buying 200,000 feet of birch for gunstocks, the ordnance bureau had to go to the wood-using industries and obtain the stock that they needed. Talking machine and furniture factories gave up stocks they had on hand to use in their business.

Walnut and mahogany lumber suitable for gunstocks and airplanes may not be used for making furniture veneer, according to a recent ruling of the ordnance and signal corps. Veneer mills are expected to be guided by the government requirements. Consequently gum and other varieties of lumber are expected to replace mahogany and walnut now used.

The navy department this month wants quotations on numerous lots of hardwood and other lumber for delivery at various navy yards, including the following:

Cypress, boat building, green or shipping dry, as follows:

Item.

5. 240,000 feet board measure (about) 1 by 10 inches and up, averaging at least 12 inches by 12 to 24 feet, even length, averaging 19 feet.
6. 60,000 feet board measure (about) 1 by 12 inches by 16 feet.
7. 120,000 feet board measure (about) 1½ by 10 inches and up, averaging at least 12 inches by 16 to 24 feet, even length in equal proportions.
8. 300,000 feet board measure (about) 1½ by 10 inches and up, averaging at least 12 inches by 14 to 24 feet, averaging 18 feet.
9. 240,000 feet board measure (about) 1½ by 12 inches and up, averaging 14 inches by 26 to 34 feet even lengths, in equal proportions.

Oak, white, for shaft logs, domestic green, as follows:

Item.

37. 12,000 feet board measure (about) 6 by 16 inches by 8 feet.
38. 12,000 feet board measure (about) 6 by 16 inches by 16 feet.
39. 12,000 feet board measure (about) 6½ by 12 inches by 12 feet.
40. 12,000 feet board measure (about) 6½ by 16 inches by 12 feet.

41. 12,000 feet board measure (about) 6½ by 16 inches by 16 feet.
 42. 12,000 feet board measure (about) 6½ by 18 inches by 12 feet.
 43. 12,000 feet board measure (about) 8½ by 16 inches by 16 feet.
- Oak, white, flitch sawn, plank, for boat building, green or shipping dry, 8 to 16 inches wide, average 12 inches as follows:

Item.

44. 48,000 feet board measure (about) 1 inch thick by 24 and 28 feet long in equal proportions.
45. 60,000 feet board measure (about) 1¼ inches thick by 16 feet, 20 and 28 feet long in equal proportions.
46. 20,000 feet board measure (about) 1½ inches thick by 12 inches and up wide by 20 feet long.
47. 60,000 feet board measure (about) 2 inches thick by 12 inches and up wide by 20, 24 and 28 feet long in equal proportions.
48. 20,000 feet board measure (about) 2 inches thick by 12 inches wide by 16, 18 and 20 feet long.
49. 20,000 feet board measure (about) 2½ inches thick by 12 inches and up wide by 22 to 24 feet long.
50. 20,000 feet board measure (about) 2½ inches thick by 12 inches wide by 20 feet long.
51. 20,000 feet board measure (about) 2½ inches thick by 14 inches wide by 32 feet long.
52. 20,000 feet board measure (about) 3 inches thick by 6 and 12 inches wide by 22 to 30 feet long.

Oak, white, domestic, green, No. 1 timber, as follows:

Item.

53. 20,000 feet board measure (about) 2½ by 12 inches by 34 feet.
54. 20,000 feet board measure (about) 3 by 12 inches and up wide by 16 feet long.
55. 20,000 feet board measure (about) 2½ by 12 inches by 26 feet.
56. 20,000 feet board measure (about) 3½ by 12 inches by 28 feet.
57. 20,000 feet board measure (about) 3½ by 12 inches by 30 feet.
58. 20,000 feet board measure (about) 3½ by 12 inches by 32 feet.
59. 20,000 feet board measure (about) 4 by 12 inches by 16 feet.
60. 20,000 feet board measure (about) 4½ by 12 inches by 32 feet.
61. 20,000 feet board measure (about) 4½ by 8 inches by 36 feet.
62. 20,000 feet board measure (about) 6½ by 10 inches by 42 feet to 44 feet.

The navy also wants 2,250 boxes for nuts, parts of gyroscopes, etc., for the Newport, R. I., torpedo station. The quartermaster corps of the army has let contracts for lasts, many of which are to be made of hardwood.

A. C. Burrage, Jr., has been placed at the head of the plywood section of the signal corps, aviation branch. New specifications for this material are issued by the interallied aviation authorities and by the navy department and signal corps. New specifications on propeller wood are also out from the signal corps.

There may be government box factories built at the big powder plants at Nashville, Tenn., and Charleston, W. Va., according to information in wooden box circles here. The box makers do not want this, of course. They say that there is an enormous demand for boxes for shells and other army equipment.

Lieut. Dorman of the ordnance department has charge of certain work in connection with boxes. It is understood that a new kind of wooden box to hold four 75 millimeter shells has been adopted by the war department, which contains three veneer partitions and is said to be similar to the box specified by the allies some time ago and made largely in Canada, and for the Bethlehem Steel Company to ship allied shells in.

R. H. Downman of New Orleans, president of the National Association and first director of lumber and chairman of the lumber committee of the Council of National Defense, has been here visiting friends. Mr. Downman's health is not good and his friends fear he will not be able to take up the duties of commander in chief of the lumber forces.

Important conferences have been held recently among representatives of various departments of the government interested in the purchase, use and shipment of lumber, with a view to clearing up traffic conditions somehow so that lumber needed by the government can be handled promptly by rail. Freight embargoes now

stand in the way. Special trains of lumber for the government have been suggested, but at last reports no conclusions had been reached. The director of inland transportation of the War Department heads the conferences.

Tentative bids have been asked and received on thousands of railroad cars of different types and materials, box and gondolas, wood, steel and composite. The specifications cannot be obtained except by car builders. The number of cars to be built is not officially decided, but is expected to be about 100,000.

The Southern Pine Emergency Bureau has recently received government orders for 28,000,000 feet in the last week of March and 85,000,000 feet in the whole month; the Georgia-Florida Emergency Bureau received orders for 16,000,000 feet last week, and the Alabama-Mississippi Bureau is reported to have received orders for 10,000,000 feet during the week.

Many new government building projects are under way, including a big artillery camp at Lee Hall, Va.; ordnance depot at Woodbury, N. J.; chemical plant at Saltville, Va.; tuberculosis hospital at Azalea, N. C., etc.

On the other hand, private building operations are to be restricted. Conferences have been held recently between representatives of the fuel administration and representatives of building trade interests with a view to limiting the fuel used in those industries to the actual requirements for war and other necessary purposes.

The Council of National Defense recently adopted the following resolution bearing upon this subject:

Whereas it has come to the notice of this board that new industrial corporations are being organized in different sections of the United States, for the erection of industrial plants which cannot be utilized in the prosecution of the war; and

Whereas plans are being considered by certain states, counties, cities and towns for the construction of public buildings and other improvements which will not contribute toward winning the war; and

Whereas the carrying forward of these activities will involve the utilization of labor, materials and capital urgently required for war purposes;

Resolved by the War Industries Board that in the public interest, all new undertakings not essential to and not contributing either directly or indirectly toward winning the war, which involve the utilization of labor, material and capital required in the production, supply or distribution of direct or indirect war needs, will be discouraged, notwithstanding they may be of local importance and of a character which should in normal times meet with every encouragement. In fairness to those interested therein, notice is hereby given that this board will withhold from such projects priority assistance, without which new construction of the character mentioned will frequently be found impracticable, and that this notice shall be given wide publicity, that all parties interested in such undertakings may be fully apprised of the difficulties and delays to which they will be subjected and embark upon them at their peril.

The house has passed a general bill giving the department of labor authority to carry on housing operations for employees of munitions factories and other establishments engaged in war work, by purchasing, constructing, leasing, renting, condemning, commandeering housing, land, etc. The bill authorizes the expenditure of \$50,000,000 for these purposes and \$10,000,000 for housing government employees in Washington. It is expected to pass the senate. There is now a law authorizing \$50,000,000 for housing by the shipping board for shipyard employees. W. E. Shannon of this city has been put in charge of the real estate department of the housing branch of the labor administration.

The Chamberlain bill to commandeer timber and lumber for the war needs of the army, navy and shipping board has passed the senate. It was amended first along lines recommended by lumbermen so that it is claimed that it does not authorize the president or his agent to actually direct the conduct of logging and milling operations, although it does permit them to prescribe the length of logs and the dimensions of lumber to be cut for war purposes.

There was a long debate over the bill in the senate, which resulted in further amendment of it on the floor of the senate so that logging and lumbering under the commandeering orders of the president shall be carried on in accordance with the principles of forestry as prescribed by the forest service; so that timber may be taken from forest reservations as well as public and private lands

and military and Indian reservations, and so that no mill be required to cut what it is not equipped to cut.

Hearings have been had on the Kelly bill for government development of natural resources, under which the government could take over all timberlands as well as other natural resources and work them for necessary war products and sell any surplus at cost, thus saving \$800,000,000 a year to the people.

The shipping and airplane programs have been discussed in the senate at some length. Regarding the latter, Senator Poindexter of Washington said that he had told the aviation authorities that they could get from Washington State lumbermen all the spruce necessary at reasonable prices. However, he said, the offer was not accepted, and many times since the department officials have been saying that they could not get spruce and that accounts for the delay in airplane construction.

The shipping board announces that the first ship of the government wooden fleet to be launched on the Gulf coast took the water at the plant of the Universal Ship Building Company of Houston, Tex., on April 7. It is of the Ferris type, 3,500 tons, and officially numbered 157.

The board states that seventeen wooden ships have been launched, four of them last week.

The board has indicated its disappointment at the shipbuilding record of March. Apparently the trouble was with steel ships, of which the deliveries did not come up to the estimates made at the beginning of the month. Eleven wooden ships were launched during the month, of 40,000 tons. Chairman Hurley of the shipping board and Manager Piez of the fleet corporation have served notice on all shipyards that they must do better this month.

It is announced that fourteen wooden tugs have been contracted for by the shipping board.

The board has authorized the Atlantic & Pacific Steamship Company to contract with west coast yards for the construction of 150 wooden ships of 3,000 tons each having sails and Diesel gas engines. These ships will require smaller timbers than the government wooden ships. Chairman Hurley announces that his policy is to encourage private shipowners to undertake new construction.

In order to obtain the ship's knees, a bill has been introduced and reported to the senate to authorize the removal of stumps from lands formerly in the old Oregon & California Railroad land grant, that has been forfeited to the government.

George M. Cornwall, editor of *The Timberman* of Portland, Oregon, has been appointed member of a group of experts in various lines of industry and of economists and accountants to review returns received at the treasury department under the excess profit tax law. Legal questions coming to them will be referred to the solicitor and special attorneys of the internal revenue bureau. The Commissioner of Internal Revenue says that the work of the reviewers will insure co-operation between the government and the taxpayers.

No Appeal from Government Prices

Besides the question of hardwood vehicle stock prices that has been up for consideration here recently, government officials and lumbermen have spent a good deal of time over the prices of pine and fir for government purposes.

Following conferences between groups of lumbermen representing the southern pine lumber industry and the Douglas fir industry, it was decided by the new price fixing committee of the War Industries Board, with the director of lumber and the Federal Trade Commission concurring, that there should be few changes in the prices.

There are some price changes on fir and yellow pine. It is also provided that the government prices should apply not only on lumber and barge and box material. The barge material prices are the same as the timber prices. Replacement orders for retail yards will be filled at the government bureau prices.

The box material prices will be made effective in some instances where lumber is supplied for boxes to hold ammunition, etc., for the

government. There has been some lumber opposition to government fixed prices on railroad materials on the ground that the railroads are private property or will be after the war, and it is argued that the lumber ought not to have to sell ear material at prices below the regular market when railroad stockholders will get the benefit of such loss to the lumbermen. However, the government and the director of lumber are standing pat.

Under the government price list it is stipulated that during the period the lists are effective loggers and lumber manufacturers will not reduce the scale of wages now being paid. There have been vigorous but ineffectual protests on some prices, especially yellow pine. No changes can be made till June 15. Refusal to cut at these prices will result in commandeering.

There have been some misapprehensions regarding the situation under the government price lists. Some lumbermen have gotten an idea that they will be liable to \$50,000 fine and a year's imprisonment if they charge more than the government prices, but it is denied in government circles here that there is any order or law for such penalties. It is intimated that if lumbermen attempt to ship their product for government purposes at prices higher than those fixed by the government permit will not be issued for its movement, which seems to place the lumbermen at the mercy of the government.

Thirty Per Cent Cut in Cabinet Output

The War Industries Board has issued priority orders for the movement of lumber shipments from saw mills in the western lumbering region. The purpose of the orders, it is understood, is to get onto the market quantities of lumber produced in the manufacture of ship timbers. Cars have been scarce for such shipments, it is stated. Without moving such lumber it would be impracticable for mills cutting ship schedules to finance their operations.

Similar conditions would exist as to mills cutting aircraft stock, which the priority orders were calculated to remove or prevent.

Reduced consumption of hardwood lumber for the manufacture of pianos and musical instruments will follow an agreement between representatives of the War Industries Board and the fuel administration on one hand, and of the musical instrument industry on the other hand. The agreement was voluntary, it is stated.

Under it the production of the industry will be curtailed 30 per cent during April and May. The facilities of the industry will become available for aircraft manufacture and for other war purposes. Representatives of the industry and of the government are working on plans to divert the industry into lines of war production. It is understood that war work will be transferred to musical instrument factories, which are well equipped to make airplane parts, etc.

The navy wants miscellaneous quantities of hickory hammer handles and 5,700 maple file handles delivered at the Mare Island navy yard, and miscellaneous lots of handles for railroad picks, claw hammers, etc., and of boxwood rules, calipers and squares, at the Great Lakes naval training station.

Our Shipbuilding Program

Edward N. Hurley, chairman of the shipping board, in an address delivered March 26, in New York, explained the work accomplished in providing ships. The following points have been culled from his address, and they give the situation in brief form:

There were thirty-seven shipyards in America at the beginning of the war. Since then eighty-one steel and wood yards have been located, and eighteen yards have been expanded.

The Skinner & Eddy Company, Seattle, launched an 8,800-ton vessel in sixty-four days after laying the keel. It started upon its voyage on January 14.

The Moore Shipbuilding Company, Oakland, Cal., launched three 9,400-ton vessels in one afternoon.

The total amount of our steel construction on March 1 was 8,205,708 deadweight tons. This is made up of 5,160,300 deadweight tons under contract with the Emergency Fleet Corporation, and

3,045,408 deadweight tons of requisition vessels. Of this total steel construction, 2,121,568 deadweight tons, or approximately 28 per cent has been completed.

Notwithstanding the difficulties of organization, the handicaps of bad weather conditions, transportation embargoes and railroad congestion, nearly as much tonnage has been constructed in American waters in the past three months as by all the other maritime nations of the world combined.

The Germans thought that by crippling their own vessels in American waters they would be able to prevent us from using them. American ingenuity and resourcefulness gave the answer by restoring these vessels to efficiency. With the expenditure of a little less than \$8,000,000 we have succeeded in placing in our war service and in the service of the Allies 112 first-class German and Austrian vessels representing a carrying capacity of nearly 800,000 deadweight tons.

The steel yards have increased their ways thirty-three in the past eight months.

Our program for building wooden ships has been beset with many difficulties and handicaps which could not well be foreseen. A year ago, wooden shipbuilding in the United States was almost a lost art. We found twenty-four old wooden shipyards, with seventy-three ship ways. The capacity for wooden shipbuilding has been increased until we now have eighty-one wooden shipbuilding yards, with 332 ways completed or nearing completion.

Assuming that these ways will each produce two standard ships per year we should turn out about 2,300,000 deadweight tons of wooden ships annually. These 332 wooden shipbuilding ways, now nearing completion, added to our 398 steel building ways, will give us a total of 730 berths upon which to build steel and wooden vessels. When you consider that we had only 162 steel building ways a few months ago and seventy-three wooden shipbuilding ways—a total of 235—an increase is shown of 495 wooden and steel berths on which we can build ships.

With our total of 730 wood and steel ways, we will have 521 more berths than Sir Eric Geddes in his recent speech stated England has at the present time.

During the railroad embargo there was a period of many weeks when there were actually nearly 9,000 cars of steel and wood shipbuilding material, loaded and waiting on sidings, to be transported to our shipyards. This situation, which has been a serious handicap, is steadily improving.

Figures indicate that the shipbuilding program at its height will require approximately 3,000 separate shipments of material daily. Many of these, however, will be small lots to concentrating points, which are being established throughout the country for the purpose of combining the fittings for a complete ship into carloads; in this way saving the expense and effort in transportation, as well as reducing the labor of assembling in the yards.

Restrictions on Wooden Buildings

The war has not yet imposed any legal restrictions on the erections of buildings in this country. The only restrictions in force are due to business difficulties, chief of which is labor and cost of material. In England it is forbidden by law to commence a building or repairs on a building where wood is required, if the estimated cost exceeds \$2,500. License is given for such construction in cases where it is considered necessary or expedient. This has practically put a stop to all private building in England where lumber would be used. The whole timber supply, both domestic and imported, is needed by the government in the prosecution of the war. The import of wood into Great Britain last year was equivalent to 680,000,000 feet, board measure. The total of the home grown woods put on the market is not stated. The postponing of practically all building till after the war will create an unprecedented demand then for building materials. What is true of England is equally true of France, Belgium, Holland and Italy. American lumber manufacturers will be in a position to supply foreign demands with good stock and at reasonable prices.

Annual of National Wholesalers

The twenty-sixth annual convention of the National Wholesale Lumber Dealers' Association met in New York March 27 and was called to order by the president, Maurice E. Preisch of North Tonawanda, N. Y., and was welcomed by W. F. Morgan, president of the Merchants' Association of that city.

The president's address was taken up largely with a history of what the association has done or offered to do to assist the government to carry on the war. Following that, E. F. Perry, secretary of the association, read his annual report. He went into more details in regard to the association's activities than the president had done, and related the accomplishments in putting trade acceptances to use, joining in the work of the Chamber of Commerce of the United States, co-operating with railroads and other agencies in pushing along business lines, sending recruits to the lumbermen who have gone to France, and increasing the association's membership.

The report of Treasurer Cape showed receipts of \$43,725, and expenditures of \$39,582, leaving a balance of \$4,142 in the treasury. Mr. Cape was reelected treasurer for the coming year.

The Bureau of Information's report was presented by W. W. Schupner, manager. The document presented details of the activities of the department during the past year, particularly the collection work. He showed that conditions were abnormal not because of a larger number of failures, but from various situations that created an increased amount of disputed accounts, which in former years were the exception rather than the rule. The total claims handled aggregate \$558,716, an increase of \$64,553 over last year, and \$178,361 over the preceding year. The fees earned amounted to \$5,300, compared with \$5,100 last year and \$4,900 in 1916.

The variety of claims was most pronounced, ranging from a very few dollars to over \$5,000 on slow pay accounts and beyond \$10,000 on disputed and litigated cases growing out of breach of contracts, non-shipments, etc.

W. F. Stradella, of Tonawanda, presented the report of the fire insurance committee, stating that the committee had decided that conditions were not favorable for launching an insurance organization in the association, but that it highly endorsed the plan and recommended that as soon as conditions were more favorable organization be perfected and the plan put into operation.

COMMITTEES AND REPORTS

The president announced the appointment of the following committees:

Nominations—A. C. Crombie, New York, chairman; W. G. Power, St. Pacome, Quebec; R. G. Kay, Philadelphia, Pa.; H. W. McDonough, Boston, Mass.; B. F. Jackson, North Tonawanda, N. Y.; T. M. Brown, Louisville, Ky.; C. V. McCreight, Pittsburgh, Pa.; A. W. Hempstead, Saginaw, Mich.; George F. Kerns, Chicago.

Resolutions—J. W. McClure, Memphis, Tenn., chairman; R. L. Sisson, Potsdam, N. Y.; O. E. Yeager, Buffalo, N. Y.; Clarence H. Hershey, Newark, N. J.; Angus McLean, Pittsburgh; D. O. Anderson, Marion, S. C.

Various committees and officers presented reports dealing with certain phases of the association's work, among which were the following:

J. R. Williams, chairman of the forestry committee, submitted his report outlining the different activities of his department.

W. R. Brown, Portland, Me., discussed the welfare work among soldiers. Twenty thousand dollars have been raised and expended for the purchase of sweaters, and for other necessary or desirable articles.

The purchase of thrift stamps was the subject of a talk by Seton Lindsay of the New York Life Insurance Company.

The committee on legislation was represented by C. V. McCreight of Pittsburgh, while F. R. Babcock of the same city gave an account of his work as councillor representing the association in the National Chamber of Commerce of the United States. At the conclusion of his report, Mr. Babcock moved that the resolutions committee be requested to present a resolution recommending the enactment of legislation that would permit war and excess profit taxes to be paid in installments instead of forcing their payment all at one time, thus working a hardship on the business and industry of the country.

Allen Walker of the New York branch of the Chamber of Commerce of the United States, told of the work of that organization. He said that he was much interested in the recently published statements of Secretary McAdoo's position in the matter of restricting building and believed that this was a concession to the building interests. He thought that the statement might be interpreted to mean that when any building is believed by a community to mean an addition to the enduring wealth of the country it was essential the building should go forward, but that factories for the manufacture of candy, etc., were not essential and would

J. W. MCCLURE, MEMPHIS, TENN.,
FIRST VICE PRESIDENT

HORACE F. TAYLOR, BUFFALO, N. Y.,
PRESIDENT

E. F. PERRY, NEW YORK, N. Y.,
SECRETARY

be discouraged. He referred to the movement now on foot to federate all the organizations connected with the building industry for more effective co-operation, told of the plans of the national chamber and urged the support of the entire lumber industry for that organization.

John M. Woods, president of the National Lumber Manufacturers' Association, extended an invitation to attend the association's meeting in Chicago May 7 and 8.

An address on the place which trade acceptances should occupy in business was delivered by R. H. Treman of New York, and F. S. Underhill of Philadelphia submitted the report of the committee on terms of sale. One paragraph summarizes the conclusion.

This association had adopted terms of sale of 1½ per cent fifteen days from date of shipment or sixty days net from date of shipment. Nevertheless, because the practice prevails we really have practically applied terms of 2 per cent cash thirty days, or ninety days net from date of shipment. Are not these terms liberal enough for you to apply and liberal enough for your customer to ask? Are you extending more liberal terms than these, and are you satisfied you have a good reason for doing so? Your committee recommend for your consideration the fact that it is unwise as well as unnecessary to be extremely liberal or to be taxed in your terms of sale.

H. Smith, of the United States Railroad Administration, expressed the hope that the conditions during the past two years will bear fruit if they induce business men to take as much interest in railroad matters as in other business affairs.

ELECTION OF OFFICERS

The committee on nominations recommended for trustees for three years: Gordon C. Edwards, Ottawa; J. W. McClure, Memphis; H. W. McDonough, Boston; George F. Kerns, Chicago; Thomas B. Hammer, Philadelphia; J. C. Campbell, Tigra, W. Va.; D. O. Anderson, Marion, S. C., and these were elected by unanimous vote.

F. R. Babcock placed in nomination for president Horace F. Taylor of Buffalo, the nomination being eloquently seconded by A. J. Brady of Buncle and Mr. Taylor was elected by unanimous rising vote. Mr. Babcock and O. E. Yeager of Buffalo, appointed as an escort committee, brought the newly elected president into the room on their shoulders and in a feeling address Mr. Taylor thanked the convention for the great honor conferred upon him, the greatest in his life, he declared, and pledged his best efforts toward maintaining the organization in its present high standard. John W. McClure of Memphis, was named as first vice-president.

Horace F. Taylor, Buffalo, president; John W. McClure, Memphis, first vice-president; W. S. Harlan, Lockhart, Ala., second vice-president; E. F. Perry, secretary; W. W. Schupner, department manager; W. S. Phippen, traffic manager, are the official personnel for the next year.

Northern Logging Congress Organized

A meeting of members of the North Wisconsin Loggers' Association, Central Wisconsin Loggers' Association and North Eastern Wisconsin and Upper Michigan Loggers' Association and Upper Peninsula Loggers' Association was held, in the Hotel Wisconsin, Milwaukee, March 28, for the purpose of forming a loggers' congress.

August J. Stange of the Union Land Company, of Merrill, Wis., president of the Central Wisconsin Loggers' Association, was made temporary chairman of the meeting and speeches were made by the presidents of the various associations as follows:

Northern Wisconsin Loggers' Association, by W. G. Collar of the West Lumber Company, and Ed. Mercier of the Stearns Lumber Company.

Northeastern and Upper Michigan Association, by M. J. Quinlan of the Soperton Lumber Company.

Upper Peninsular and Upper Michigan Association, by J. H. Bice of the Greenwood Lumber Company.

Central Wisconsin Loggers' Association, by A. J. Stange of the Union Land Co.

Upper Peninsula Loggers' Association, by J. H. Bice.

An address on the subject of prohibition was made by C. W. Eldridge, Columbus, O.

The state fuel administrator, W. N. Fitzgerald of Milwaukee, addressed the meeting on the subject of conservation of fuel.

W. A. Holt of the Holt Lumber Company, read a paper, "Every Lumber Jack Can Do His Bit," and an hour and a half was then devoted to "Power Logging" by J. J. Lumm, Clyde Iron Works, Duluth, Minn.; P. O. Piersol, Lidger-

wood Manufacturing Company, New York City; C. C. Austin, American Hoist and Derrick Company, St. Paul, Minn.; and W. M. McGowan, Bell Railway Construction Car Company, Georgiana, Ala.

In connection with their talks the American Hoist and Derrick Company had some interesting stereopticon slides and the Clyde Iron Works exhibited some fine moving pictures of southern logging operations.

In connection with the talks the American Hoist and Derrick sell, President of the Wisconsin Advancement Association, was given, and after singing the Star Spangled Banner the meeting adjourned to meet at 9 o'clock Friday morning.

There were numerous talks at the morning session, some of which were on the following subjects:

Fire Prevention, by W. A. Holt; Logging Accidents and Methods of Prevention, by Daniel McDonald of the Foster-Latimer Lumber Company, Mellin, Wis.; Woods Labor, by W. G. Collar, and by Edward McRoy of the Stearns Lumber Company.

CONSTITUTION AND BY-LAWS.

The chair appointed a committee to draw up a constitution and by-laws, and also to present nominations. The committee was composed of J. W. Gleason, W. K. Parkinson, J. H. Bice, M. J. Quinlan, W. G. Collar, and W. A. Holt. The idea before the committee was to work out a set of articles that would effectually conserve the benefits of great progress made and at the same time leave plenty of room for expansion. The following report of a constitution was presented

This beautiful Figured Gum Dresser speaks for itself. The firm that manufactured this article is a northern company whose product is well and favorably known, and much appreciated.

Furniture, Pianos, Phonographs, and Interior Woodwork in Figured Red Gum (finished natural) command attention thru the innate beauty of the wood.

The irregular, mottled and fanciful figure never tires the eyes. Soft, subdued tones render it permanently pleasing, always fresh and interesting.

YOUR initial satisfaction with Figured Red Gum depends mainly upon the service and information supplied by your connection. N. B. service goes with our product—we study and meet your individual needs.

This policy is possible because of large stocks, specially selected and highly figured logs, perfectly manufactured veneer, all carefully and fairly sampled—these are some of the benefits derived from trading with us.

No Economy in Cheap Glue

War Prices Shouldn't Discourage Use of Dependable Product

ONE angle of the war situation as it affects panel manufacturers, furniture makers, fixture concerns and others who are laying veneers and manufacturing built-up work is the higher cost of glue. The movement upward of beef has involved a rise in the price of hides and other by-products from livestock, and one of the things which are commanding higher prices as a result is glue.

It is probably true that if the increase in the cost of glue were compared with other increases, including varnish, glass, hardware, abrasives and other materials used around furniture factories and similar plants where glue is purchased in quantity, it would be found that the increase was not so great, after all. Besides, most manufacturers have taken care of these prices by horizontal advances covering their entire line, and the ultimate consumer, via the dealer, is providing for this increased cost of production.

Hence, looking at it from every angle, there is no real excuse for cutting down on the quality, on the theory that it is safe to reduce expenses in this way. Compared with some other elements of expense entering into the production of glued-up work, such as lumber, veneers, labor, power, etc., glue is a mighty small item, and it is at the same time such an important one that it is poor policy to economize in its purchase.

An interesting feature of the situation, as it affects the veneering industries, is that the largest users of glue are usually the ones who are most willing to pay the price. A certain big panel maker who buys his glue in carload lots instead of a few barrels at a time, as the ordinary consumer does, pays higher prices than the average just because he insists on top-notch quality. The very fact that he knows what he is buying makes him willing to pay more money than lots of consumers are willing to lay out in this way because he is in a position to judge quality and therefore measure results.

In too many cases glue is just glue. Perhaps this is not altogether the fault of the user, but part of the blame rests on the glue producers themselves. They have not been able to educate glue buyers through the trade and technical press regarding the importance of standardizing their glue, just as they have standardized other materials which they use. The tendency therefore is to experiment, to make price the predominating element, to substitute salesmanship for science in the distribution of the product. A lot of things could be improved in this connection.

There is a certain table manufacturer who buys a fair lot of glue in the course of a year who is an inveterate bargain hunter when it comes to the purchase of

this item. Strangely enough, he is strictly a quality buyer in the purchase of veneers and lumber, and immediately gets suspicious of the salesman who claims to be able to beat the market a couple of dollars a thousand on either of these materials. He has arrived at years of discretion and he knows that you usually get just about what you pay for. But the purchase of glue, apparently, possesses some mysterious attractions that makes him willing to cast aside the usual restrictions placed on his purchasing and to adopt a speculative attitude with reference to it.

The salesman who whispers a few words in his ear regarding a special proposition that is being presented to a favored few and who tells him about the wonderful results that are being secured by users of a new and remarkable blend originated by his concern is able to get attention from this consumer when a straight-out declaration of the characteristics of the product, stated in plain black and white, and in terms that can be demonstrated and checked up on in the laboratory, would probably not command much attention.

Reference to the use of the laboratory as a means of proving or disproving the statements of salesmen suggests that less is done in this line in the industries where veneering is done than in most businesses. Manufacturers who are selling the automobile trade know how carefully purchasing is done, and specifications must be complied with, even to the extent of measuring characteristics by laboratory methods. Big institutions buy all of their materials on specifications—and don't accept the material on faith. On the contrary, the laboratory technician is asked to make tests of it to insure getting just what was ordered and just what is to be paid for.

Not only do buyers in the furniture and allied fields refuse to apply this test to glue, as a general rule, but they buy varnishes and similar supplies in the same empirical way, to use a term that is perhaps stretched a bit in order to cover the situation. It would be more accurate to say that personal prejudices and leanings, sometimes based on experience, and other times based on factors less definite, control the buying policy, and that the buyer often does not know exactly what he is getting. He is purchasing a certain kind of material, but whether it possesses the characteristics that are needed for the work in hand is a question that cannot be determined in advance of actual use.

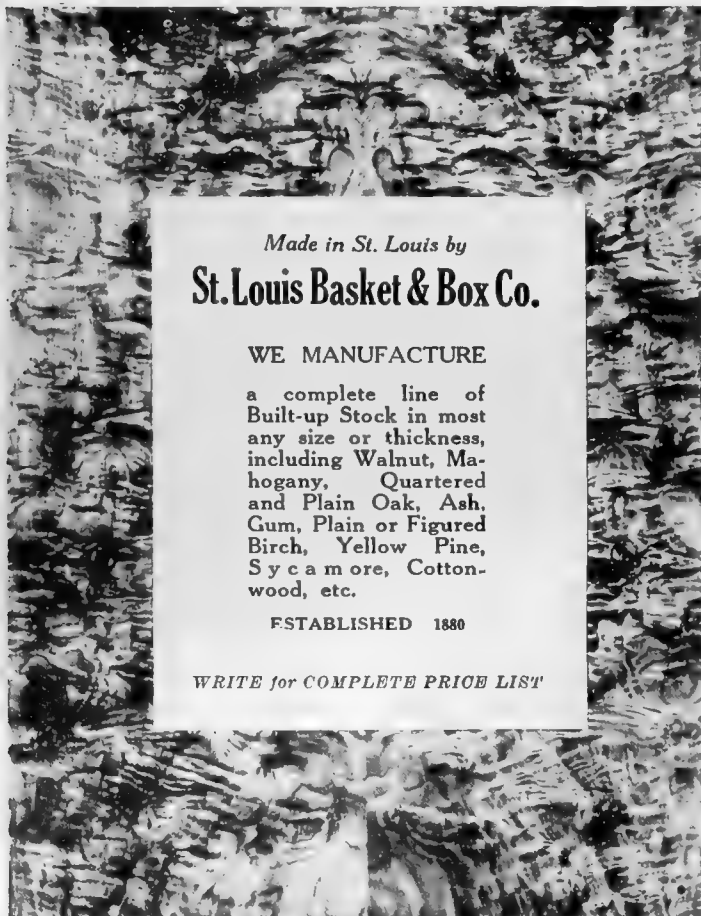

As far as glue is concerned, it is possible to find out exactly what the material should supply in certain directions, and it is therefore possible to know prior to purchase whether a certain glue is the exact material that is needed. Buying a misfit merely because of an attrac-

tive price is just as foolish as buying a suit of clothes that doesn't fit simply because the price happens to be marked down. In neither case is the buyer likely to get the satisfaction that will be experienced if a little more money is paid, and the right article is obtained.

In the big factory, such as a panel plant, which is devoted exclusively to the manufacture of glued-up work, and to which for this reason much study of glue and other materials is logically devoted, it is practicable and desirable to install the necessary devices for measuring glue characteristics, covering viscosity, tensile strength and other elements. In the smaller plant, where the quantity of glue purchased does not suggest such equipment, the services of an industrial chemist should be resorted to, and work of this kind secured on a fee or regular service basis.

In most communities of size there are usually a number of commercial laboratories where tests of this kind are made at reasonable cost, and where complete reports on materials of all kinds purchased for use in the plant may be secured. These reports, in view of the fact that they will enable the buyer to check up on the delivery of goods in accord with specifications, and will also enable him, after experience, to specify more exactly, are more valuable than the cost would suggest; and the manufacturer who is in doubt regarding his glue requirements should secure the services of such a laboratory and have some work of this kind done.

Furthermore, it is often possible to make a showing

in the direction of economy by knowing exactly what to buy, and then buying it. The statement was made that it does not pay to economize in the purchase of glue, and that is true. It does not pay to buy a glue that is below the grade that ought to be used merely in order to save in the price. But it does pay to buy a cheaper glue than the one that is being employed, if it is known in advance that the less expensive material is suitable for the work and will accomplish the results just as well.

Likewise, indications regarding the viscosity and spreading qualities of the glue will show how much water may safely be employed with it, and here will show the way toward intelligent economy in many cases. In short, absolute knowledge concerning glue will prove profitable because the buyer will then know exactly what he can do instead of being compelled to feel around in the dark, as is too often the case at present.

It is true enough, as the reader probably will suggest, that the best glue in the world will not make a good job unless it is properly handled. In the small plant, where careless methods of handling are sometimes noted, glue is allowed to become cool before the work is put under pressure, and for this reason does not provide the adhesive qualities that are desired. Where glue is spread by hand, the surface is not always evenly coated, and this sometimes causes trouble and loosening of the veneer. Other errors are made, sometimes in larger plants, in handling the glue, such as in the application of too great heat, which destroys the fiber and makes the material next to valueless; and when these mistakes are committed the result shows in the final product.

In spite of these things, and in spite of the fact that a good glue-room foreman will turn out better work with poor glue than an inefficient crew with the best glue manufactured, it pays to get good glue and the right glue. The whole strength of glued-up work depends on the glue, and since it is thus the foundation of all that follows, it is not too much to say that it is the most important element in the product. Put price below quality in glue buying—but know what you ought to have when you go into the market.

Spanish Cedar

The supply comes from the West Indies and Mexico, and the wood is usually, if not always, imported as logs. They may be of large size, but many are quite small—about the diameter of large telegraph poles.

Suggest Limiting Use of Certain Woods

Word comes from Washington that the Signal Corps is notifying veneer mills that no mahogany suitable for airplanes nor walnut suitable for gunstocks or airplanes be shipped for commercial use. The patriotism of the mill owners is relied upon to make the regulation effective, although the government will probably check up on the operators.

Canadian Woodworking Markets Analyzed

Insufficient Labor and Raw Materials Most Serious Retardants. Demand Holds Well

HIS is written within a few days of the date of the first anniversary of the time when the United States officially began to get into the "business of war." Canada has been very much in that business for over three years, so manufacturers in the United States may find some information, encouragement or inspiration through a visualization of conditions of similar industries in Canada. During March nearly forty users of lumber in eighteen localities were visited and quizzed. Since furniture manufacturers received the most attention, this article is prepared primarily for them and those who supply them with raw materials.

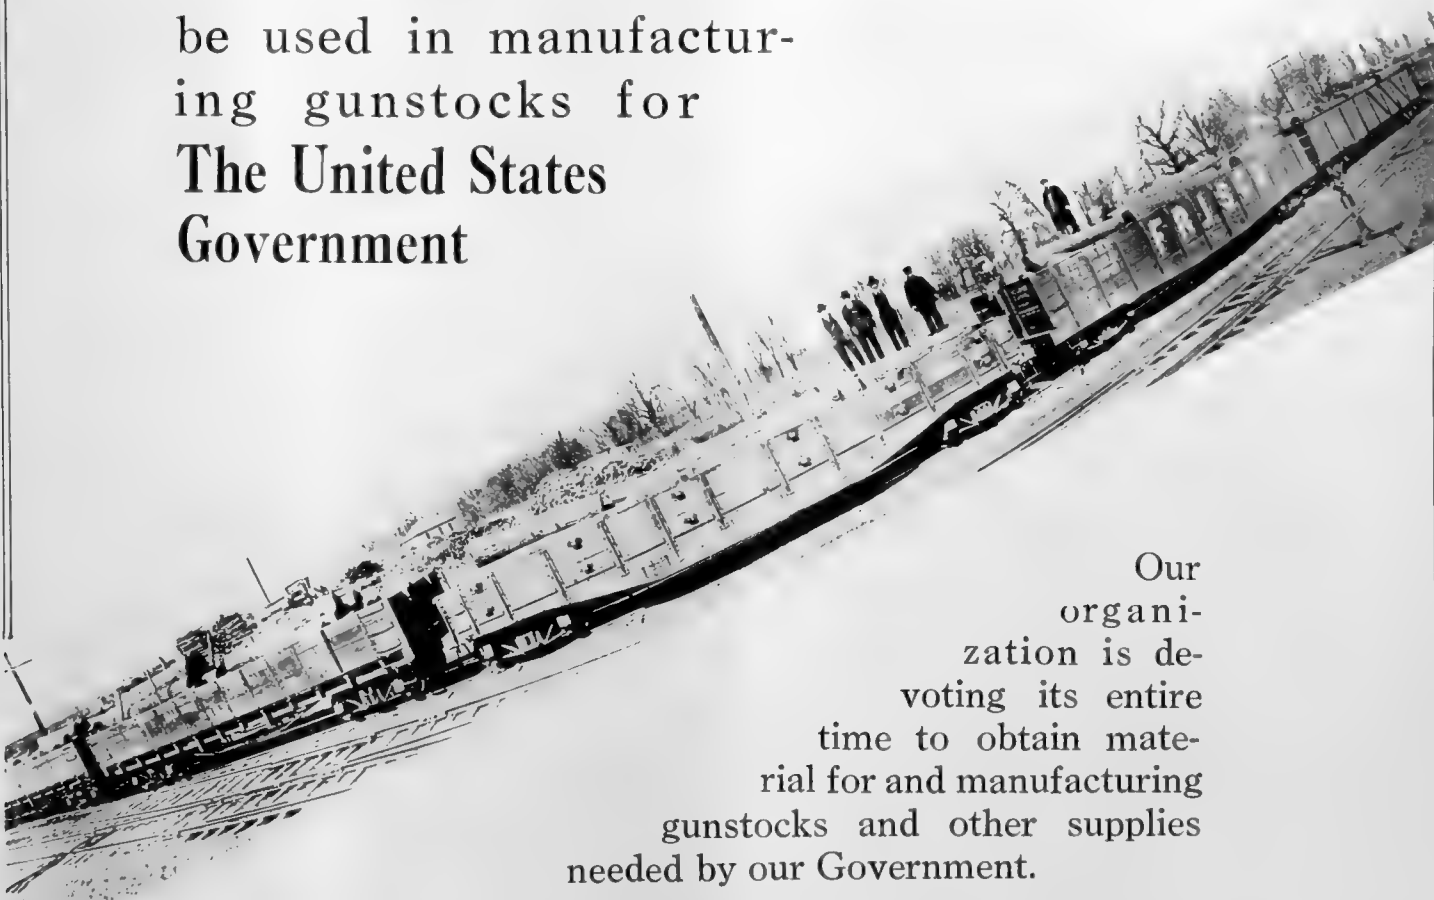

Briefly summing up the whole situation, furniture and piano manufacturers are pounding along courageously in the face of all sorts of discouragements. The one bright ray of hope that shines constantly is the demand for goods. That ray might not be so bright if factories were able to produce to capacity, but labor is very scarce and raw material markets are rather unstable and uncertain. This applies especially to lumber and kindred supplies, most of which are obtained in the United States. Many a carload of lumber destined for Canadian delivery was unloaded this side of the boundary line in January in

order that cars might be had for more urgent needs, and even now there are enroute many carloads of lumber and veneers that were started two or three months ago.

In 1914, when the war broke out, the woodworking industries of Canada were not in a prosperous condition. Building operations were practically at a standstill, and have so remained. At that time the need of labor was far from a paramount question. The problem then was to provide employment for the regular workers and keep the organization together. Many furniture makers went after shell box contracts, and there is no doubt but that these orders materially assisted the industry in 1915 and 1916.

There seems to have been practically no attempt to increase the factory capacity of the woodworking industries during the past four years. The prevailing opinion is that the number of employes is fifty-five to sixty per cent of the number required to operate for normal output, and there is no immediate prospect of any increase in the number of employes. More could be used, but they cannot be obtained. In fact, there seems a possibility that labor in this field will be further depleted

PICKREL WALNUT CO., St. Louis, Mo.

made, but the rank and file have held to solid lines most persistently. Now several more manufacturers are making arrangements to install the essential equipment for making built-up parts. They are doing this in spite of the high cost of the necessary machines and materials. No doubt the meager and lessening supply of native woods, together with the exceeding high price of suitable solid lumber has something to do with the movement. Whatever the causes, the indications are that producers of cabinet wood veneers, crossbanding and core stocks will find a growing demand from Canadian manufacturers. Whether or not these demands can be readily met today is another story.

Phonograph business has apparently prospered since the beginning of the war. The comparatively low price at which a machine may be purchased; the deferred payment plan used in marketing, and the versatility of the instrument have all helped to develop this field to a point that has encouraged several firms to enter it. Some piano manufacturers seriously canvassed the field as a possible solution of keeping plants in operation, but the scarcity of labor has held most of them up. A few, however, took up this line and naturally will be ready to push it harder if the importation of foreign makes is

prohibited, and the prohibition is continued when the returned soldiers again don the mufti and fill the present depleted ranks of labor.

It is highly significant to note that an effort to find any among the furniture and piano manufacturers who had ceased operations on account of the war was almost futile. One solitary name was found in the furniture industry; that of the Toronto Furniture Company, whose high-grade line was known not only at home, but in the United States. But the reason is that the Curtis Corporation took over the plant and now, instead of furniture for the peaceful home, it is turning out airplanes for the United States in order that our skylarks may throw the fear of wrath to come into the soul of "Billy Boche."

Still, while none have been compelled to cease operations, conditions arising out of the war have taxed their resourcefulness, their enterprise, their capabilities, their perseverance and determination to an extent that not one of them could possibly realize they were able to exert before confronted with the reality. Now, with the war daily making further call upon their labor and material markets, they are still full of the spirit of "carry on and win the war."

Suggested Glue Specifications

Conditions and Terms Under Which Tests Are Made and Recorded

 HE importance of glue increases as new discoveries are made and new processes tried out. No veneer work can be satisfactory unless the glue is good. The airplane calls for a very exacting use of glue and no article which is not fully up to the standard can hold a place in the airplane factory.

The special committee on glue appointed by the society of automobile engineers of the United States has recommended the following glue specifications for consideration:

Process specifications.—Tests at airplane factory are made to determine the strength of glue joints under the average conditions prevailing in the glue room. Tests shall be made on representative woods used by the manufacturer concerned. The glue test specimen shall be made of three boards, $\frac{3}{4}$ to 1 inch thick, 4 feet long, and $5\frac{1}{2}$ inches wide. The gluing must represent actual practice, and no special precautions other than those ordinarily used shall be taken in preparing the glue or wood for the test specimen. The gluing shall be performed by the employees of the airplane factory who are accustomed to handling this kind of work. No protective coating of any kind shall be applied to the wood surfaces or to the finished specimen. This specimen shall set not longer than one week. The 4-foot specimen shall be cut lengthwise and 10 shear blocks cut from each half, according to the dimensions given. The shear blocks shall be tested as follows:

(a) Ten of the shear blocks shall be tested immediately after sawing. The strength of the glue in shear shall not be less than that of the wood.

(b) Ten of the shear blocks shall be soaked in water at 20 degrees Cent. for fifteen hours, and tested within thirty minutes after removal from the water, without any preliminary drying.

The strength after soaking shall not decrease more than 60 per cent.

The required strength shall be obtained for 80 per cent of the samples tested under each condition. A rejected propeller may be substituted for the 4-foot specimen specified above.

The tests of the airplane factory shall be in the presence of an inspector for the signal corps regularly stationed at the factory and familiar with the methods employed there. A test shall be made whenever a brand of glue is changed or a change is made in the method of gluing which in the opinion of the purchaser's inspector is important enough to warrant a test.

Material Specifications

General.—This specification covers all glue for propeller construction and for splices of important structural members, such as longerons and beams. For all other work where woods of low shearing strength are used any glue recommended by a reputable glue manufacturer can be used.

Quality.—The glue must be a high grade hide glue, sweet, and free from any deleterious substances. The glue shall be compared to a standard sample for adhesiveness, jelly strength, viscosity, grease, and foam. The standard sample may be obtained from the director, Forest Products Laboratory, Madison, Wis.

Test for adhesiveness.—The glue manufacturer may compare his glue with the standard sample by any method he desires. The test by the government, however, will be made as follows: The strength test will be made by gluing together two pieces of maple or birch one inch thick, having a shearing strength of at least 2,400 pounds per square inch. This will require wood having an air dry weight of about 50 pounds or more per cubic foot, and a moisture content of from 8 to 12 per cent. These will be tested by shearing them in a testing machine. The glue will be mixed in proportions of two parts of water to one part

of glue, unless otherwise recommended by the glue manufacturer. It will then be melted in a water bath and applied to the wood at a temperature of about 60 degrees Cent. (140 degrees Fahr.). After gluing, the test blocks will be held in clamps and allowed to stand for six additional days. They will then be finished, so that the blocks when ready to test will have a glued joint two inches square. When tested no block shall fail under a load of less than 2,200 pounds per square inch, and the average shearing strength shall be at least 2,400 pounds.

Jelly Strength and Viscosity

Jelly strength.—The jelly strength will be determined upon a mixture containing twelve parts of water to one part of glue. The glue will be soaked and melted as described under "Adhesiveness," then allowed to stand overnight in a refrigerator at a temperature of 5 to 10 degrees Cent. (40 to 50 degrees Fahr.). The relative strength of the standard sample and the manufacturer's sample will then be determined by pressure with the finger immediately after the samples are removed from the refrigerator.

Viscosity.—The viscosity will be determined as in an Engler viscosimeter, upon a sample containing one part of glue to five parts of water soaked and melted as described under "Adhesiveness." Two hundred cubic centimeters of the glue mixture will be run through the viscosimeter at a temperature of 60 degrees Cent.

Grease.—The relative amount of grease present will be determined by mixing dye with some of the sample remaining from the viscosity test, painting it on unsized white paper, and observing the appearance.

Foam.—The foam will be tested on the sample used for viscosity. The sample heated to 60 degrees Cent. will be beaten for one minute with a power egg beater, or similar instrument, and allowed to stand one minute or until the height of the foam can be measured.

Odor.—The odor of the glue when in the hot solution must be sweet, and must remain sweet for forty-eight hours; that is, free from any suggestion of deteriorating animal matter.

Marking.—The glue which has been tested and passed shall be barreled in the presence of the government's representative and marked with the run number, date of run, and inspector's stamp. The glue which is marked in this manner may be sold as certified glue, and its use will be permitted in airplane factories.

Louisville Veneer Industry Expanding

Louisville has been conspicuous as a veneer center for some time and now there is a further growth of activities centering there of more than passing interest. War conditions seemingly have not curtailed the demand for veneer and panels. Practically every veneer and panel plant there is so busy that the problem is to get help and get material rather than to get orders for work.

The Kentucky Veneer Works, which is one of the busiest places in Louisville, has been spreading out recently and has become interested in two operations down in Alabama, one at Livingston, one at Stewart.

A new firm has been organized and put in the saddle at Livingston know as McGehee-McCracken Veneer Co. The president of this organization is A. M. McGehee; vice-president, H. M. McCracken, and secretary-treasurer, F. C. McCracken. Mr. McGehee is in charge of the operations at Livingston and Stewart and the selling end of the business is domiciled at Louisville with the Kentucky Veneer Works at 14th and Magnolia.

The plant taken over at Livingston is that of the Sumpter Manufacturing Co. and the new enterprise also includes the McGehee Lumber and Veneer Company plant at Stewart, Ala. It is the intention to eventually consolidate all these operations at Livingston, Ala. The present equipment down there consists

of one eight-foot rotary machine and one seven-foot, and it is the intention to later add another rotary. The equipment also includes two standard dry kilns, one blower kiln and a Philadelphia Textile Machinery Company drier. Then in addition to the veneer equipment they have a slack barrel heading plant which is busy at work making heading. The main veneer product of these plants is rotary cut gum, though they have some pine for veneer work too. The heading plant is cutting pine.

As stated above, the sales end of this undertaking is being handled at Louisville, and the Kentucky Veneer Works people figure that with this equipment and their rotary and machine and saws at Louisville they have one of the heaviest capacity producing outfits of the country and are prepared to handle a big volume of business.

Geo. L. Kannapell, of the Parkland Veneer Co., who lost his plant at Louisville some time ago in a fire that destroyed the Parkland Sawmill, is operating a plant at Adams, Tenn., which was a part of and is still operated as the Parkland Veneer Co. This is a fitch-making and dimension stock plant and he has not yet equipped it with veneer saws, but has his fitches cut into veneer at custom mills. Mr. Kannapell also heads a new enterprise located at Mound City, Ill., which has just started up under the name of the Mound City Veneer Mills. He has C. E. Talbot associated with him in this business, and Mr. Talbot will look after the timber and manufacturing end while Mr. Kannapell will look after the selling. The Mound City Veneer Mills started up with two rotary machines. The first start was made Wednesday, April 3. It is the intention to add another rotary soon, and it is probable too that they will add saws later on.

Mr. Kannapell, who still has his office in the Louisville Planing Mill plant in the Parkland end of town, expects to locate his sales office up town some time within 60 days and to continue this as headquarters for the two institutions, doing the selling from this end.

New Panel Plant Starts Well

The Inman Veneer and Panel Plant Company, Louisville, Ky., which has for some time been equipping a strictly up-to-date panel plant in Louisville at Twenty-Ninth and Broadway, and has made out of it perhaps one of the most modern panel plants in the country, just got to running good when there came a call for war needs which involved panel work.

It has in hand at present certain parts of veneered work for 1,300 flying machines and the work is pretty well under way.

Airplanes of the type for which they are supplying material embody twenty-one items in veneer work in addition to frames of other woodwork. And the twenty-one items in this instance are divided between the Inman Veneer and Panel Company in Louisville, and the New Albany Veneering Company. Items one to nine are being made by the New Albany Veneering Company, while items nine to twenty-one are being made by the Inman Veneer and Panel Company. It is perhaps not advisable to go into details as to the items. It can be said, however, that they include engine foundations, seat backs, tool boxes, wing panels and quite a lot of purely ply work in veneer, some of which is very thin.

Their specifications call for yellow poplar centers, the two outsides of mahogany, and in many cases the stock used is so thin as to practically set new standards in the working of thin veneer in the making of three-ply stock. Some of the three-ply stock must finish down to only 1/16 thick, the poplar centers varying in thickness from eight to the inch to forty-five to the inch. The mahogany face veneer runs from 15 to 45 to the inch.

Some idea of what this work means in the utilization of mahogany can be had from the estimate that the Inman Veneer and Panel Company will require probably 2,000,000 surface feet of mahogany in the completion of the airplane work in hand.

While specifications for some airplane work seem to call for waterproof glue, in this case the specifications, which are very rigid as to material, insisting upon poplar centers and mahogany faces, call for a standard grade of hide glue.

In addition to these war orders the Inman Veneer and Panel Company has already built up a splendid business in standard and special panels for furniture and kindred work, and it is very busy both at the Louisville plant and at a raw material cutting plant which it erected at Mound City, Ill. The plant at Mound City is known as the Inman Veneer and Panel Company, which has its main offices located at Swissville, and U. A. Swisshelm is superintendent of the practical end both in the Mound City plant and in the operations at Louisville. They have three rotary machines in the Mound City plant, two of which are in operation at the present time. They cut poplar, gum and plain oak. Their quartered oak faces, of which they use considerable quantity, they have to purchase on the outside, as also their mahogany and other figured faces. It is their expectation, however, to make their own fillers, plain veneer and rotary cut oak faces at the Mound City plant.

The moving spirit behind this new enterprise in the veneer and panel business is C. W. Inman of the Inman Furniture Company, with a plant at 30th and Kentucky, while the active man in charge of the new operations is his son, Harry Inman.

The Merrimac Veneer Company has been incorporated at Byram, Miss.

Change in English Hardwood Supply

A review of the English hardwood situation by Timber, a London trade paper, refers to the arrival of parcels of hardwood on consignment, "but the prices asked were well-nigh fabulous." The paper then proceeded to comment on the outlook of getting supplies from homegrown timber, and stated that it was already being done in the case of oak, ash, and chestnut, and that it was probable that home supplies would meet much of the demand after the war.

Article 3. The object of this congress is to promote and coordinate the mutual interests of its members.

Article 4. Meetings shall be held annually upon the call of the president and secretary at a place to be designated by them. Annual meetings shall be held the third Thursday of September of each year.

Article 5. The officers of this congress will be: president, vice-president, secretary and treasurer. The two latter offices may be held by one person who shall be elected at each annual meeting. They shall serve for one year or until their successors are elected and qualified.

Article 6. This constitution may be amended at any annual meeting by a majority vote.

Article 7. The expense of this congress shall be met by an assessment to be levied by its officers on the associations named in Article 2 and based on the basis of membership of said associations.

Article 8. Each association named in Article 2 which shall hold membership in this Congress shall be allowed one vote.

Article 9. The officers may establish such by-laws under this constitution as they may deem necessary. Being in full force and effect until approved or disapproved at the next meeting of this congress.

The report on the constitution and by laws was adopted as read.

ELECTION OF OFFICERS

The following names were placed in nomination for the several offices and were unanimously elected:

President—G. S. McLurg, Kneeland McLurg Lumber Company, Phillips, Wis.; vice-president—Edward A. Hamar, Worcester Lumber Company, Chassell, Mich.; secretary—August J. Stange, Union Land Company, Merrill, Wis.; treasurer—W. E. Hallenbeck, J. W. Wells Lumber Co., Wausaukee, Wis.

Each association forming the congress was authorized to appoint as many "four minute" men as might be deemed necessary, and send the names to the secretary.

The chair appointed a committee of one, W. K. Parkinson, to investigate the matter of forest products insurance, and to take it up with the Wisconsin insurance commission at Madison.

It was arranged that the associations forming the congress take the necessary steps to work out a scale of wages, or scales of wages, to be made applicable to the several districts, the scale for each district to conform as nearly as possible to local conditions and circumstances. The scales as worked out will be held for action by special committees.

The food situation will be given special attention and a man who is posted on the subject will visit the various camps and explain the situation in regard to substitutes for wheat flour.

The offer of the Clyde Iron Works to furnish badges for the members was accepted.

DEVELOPING CUT-OVER LANDS

An address by W. G. Bissell on the subject of developing the cut-over lands of northern Wisconsin was so well received that copies of the address were ordered in sufficient numbers to supply all the members of the congress. He advocated the raising of sheep and cattle on the cut-over land, and sheep in particular. The following pointed extracts are from the address:

For years "Back to the Land" has been the slogan of many, and the wisdom of this slogan is more clearly set forth today than ever before. This appeal must reach beyond those who are actively engaged in agricultural pursuits. Every business man, every professional man, and every law maker must give it heed and direct efforts to cooperate and assist in this work.

For the past year we have been talking "more sheep more wool" for upper Wisconsin, and we feel we have abundant reasons for so doing. We have large areas of splendid agricultural and grazing lands lying absolutely dormant, not earning or producing a dollar in food value or raiment. That these lands are splendidly adapted to sheep husbandry there can be no question. World conditions are such to-day that the question of wool production is but little less important than that of food.

There was a marked shortage of this important commodity before war was declared, and since then the world's consumption has been increased by 25 per cent, and the world's production has been decreased by almost a like amount. Prices have advanced by leaps and by bounds until to-day there is practically no prices placed upon wool. The small amount of raw material we have on hand in this country has within the past two weeks been commandeered by the government.

A recent survey of the number of sheep in the United States, has placed the number that will be shorn during the summer of 1918 at less than 33,000,000. If this be true, our total production for 1918 will not exceed 230,000,000 pounds and our requirements will be at least 800,000,000 pounds. This would not be so startling were it not for the fact that in every wool producing country throughout the world there is an equal falling off in production. Our total home production, if divided equally, will give but a trifle over a pound of scoured wool per capita and our entire output will no more than supply our military wants to provide for an army of 2,000,000 men, leaving nothing for our civilian population.

Seventy per cent of our wool is being produced west of the Mississippi River. The flock masters of this region have been deprived of their grazing lands to the extent that they now have 25 per cent more sheep than they can summer graze. The problem that confronts them is whether they shall send these surplus breeding sheep to the shambles or seek new pastures for them. It is most natural under present price conditions that they desire to expand rather than contract their business. So we have been directing our energies with a view of attracting the flock masters toward our undeveloped country, not only that, but we are striving to organize our own people, our surplus capital, in Wisconsin, to interest themselves and invest their money in a business that we believe is not only fundamentally sound, but which will be very profitable.

We believe in sheep for Upper Wisconsin because the financial returns from them, if properly supervised and handled, will produce \$2.00 to \$1.00 over that of the production of any other domestic animal. Sheep and lambs can be made marketable and a finished product without grain. Less labor and less man power is required on a sheep ranch than on any other, thus it will assist largely in solving the labor problem. To successfully care for them, expensive machinery is not required, expensive buildings are not necessary, less productive and lower priced lands can be effectively utilized. Sheep are natural scavengers; they will eat and relish almost any kind of a weed thereby benefiting the lands.

There are scores of reasons why capital should embark freely in this wonderful game in upper Wisconsin. With our splendid water, our wonderful growth of grasses, our shrubs and brush upon which sheep naturally feed, it is only a matter of a few years when upper Wisconsin will be one of the great sheep producing countries and perhaps the greatest finishing country in the United States.

We can offer the flock master a country where droughts are unknown, where pure water is in abundance everywhere, and a climate that is particularly adapted to the highest and best development of sheep. Now, if this be true, why not as sensible business men go to it? It means much to us as a state, it means a whole lot more to us as land owners. In my judgment, the time has arrived, when to accomplish the best and most desirable results, we have got to adopt a new slogan, let it be "push back the brush line." The fact that you large land owners occasionally sell a tract of land purely for speculative purposes, does not get us anywhere as a development proposition. That is simply changing money and titles. What the world needs to-day is increased production and if any of you men know of a shorter cut to "push back the brush line" than going into the sheep business, I would like to have you tell me what it is and I will immediately revise my ideas.

Government Wants Line on Walnut

The Signal Corps is in need of all the walnut lumber suitable for the construction of propellers that it can secure, and the Ordnance Department likewise needs all of the walnut lumber suitable for the construction of gun-stocks that it can secure.

In view of this condition during the present national emergency it is absolutely imperative that no walnut suitable for either of the two above mentioned purposes should be disposed of for any other purpose and anyone holding walnut, or knowing where it is held that is suitable for either of these purposes should communicate with whichever of these two departments is the proper one to write to.

It is likewise the duty of anyone knowing of cases wherein this national need is not being complied with to communicate with one of these Departments, by addressing in connection with propeller material the "Materials Department, Equipment Division, Signal Corps, 119 D Street Northeast, Washington, D. C.," or, in connection with gunstock material the "Ordnance Department, Procurement Division, 6th and B Streets Northwest, Washington, D. C."

A Caterpillar's Record Load

The steam caterpillar log hauler makes records and then breaks them. The latest high notch is claimed for such an engine working for the Bekkedel Lumber Company, Couderay, Wis., and operated by J. F. Crandall. It brought to the mill a train of eighteen sleds, each loaded with 4,000 feet, or 72,000 feet in all, with a total weight exceeding a million pounds.

The Country's Supply of Oak

The war has created new demands upon the forests of the United States for oak, and the question which is foremost in the minds of many is whether there is any danger that the demand cannot be met. That question is not being asked by persons who are informed on the oak situation so far as available timber is concerned, for they know that there is enough oak in our forests to furnish all needed for war purposes, though the war continue for years; and at the same time it can meet all possible demands for this wood for domestic needs.

That statement is based on the supply of oak trees growing in the woods at the present time; and takes no account of the labor situation. The oak is there; but whether sufficient labor to cut the logs and saw them is to be had is another matter. There appears to have been some timidity of late among persons who feared that our oak was short, that the forests are depleted, and that the government might have difficulty in procuring what it needs. It is difficult to account for such a notion getting a foothold anywhere, and particularly among persons who claim to have information concerning the country's oak resources.

On April 25, 1913, *HARDWOOD RECORD* published elaborate statistics, in an article of several pages, covering the country's timber supply, with special emphasis on hardwoods, and oak the most prominent of all of them. The figures contained in that article set at rest any doubt and dispelled any scare regarding the oak supply.

The figures then published were based on the elaborate report of the Bureau of Corporations, by Luther Contant, which had then been recently made public. The bureau's data were official, and as accurate as they could be made with the facilities at the government's disposal for collecting information on that subject. The report covered more than 1,000 printed pages and no one ever claimed that it was unsatisfactory because of its brevity. It went into the most minute details concerning the country's forests, and no report of standing timber comparable with it was ever published before, and none since. It superseded the Herbert Knox Smith report of a date two years earlier, and that of C. S. Sargent thirty years earlier.

OAK IN PARTICULAR

The Bureau of Corporations' report dealt with all commercial timbers in the principal producing districts; but oak is the only one calling for special attention now, because of the challenge made by misinformed persons that there is not enough of this wood to meet government needs.

The figures on oak which are here given are taken from the government report of 1913, so far as the states are specifically included in that report, and where not specifically included, supplemental estimates are made, pro rata, on the basis of output. The Bureau of Corporations sent agents into the various regions and they consulted with timber owners and made use of all available data in reaching totals, and the final figures are worthy of acceptance as approximately correct.

The table which follows gives the oak stand of timber in the leading states producing this timber:

State.	Stand of oak, feet.	State.	Stand of oak, feet.
Arkansas	26,765,000,000	Missouri	3,818,000,000
West Virginia	25,000,000,000	Illinois	3,700,000,000
Tennessee	25,000,000,000	All New England...	3,700,000,000
Kentucky	22,500,000,000	Georgia	2,875,000,000
Ohio	13,500,000,000	Maryland	2,700,000,000
Pennsylvania	13,300,000,000	Virginia	2,184,000,000
Louisiana	10,920,000,000	New York	2,000,000,000
Indiana	10,400,000,000	South Carolina...	1,780,000,000
Mississippi	10,023,000,000	Florida	328,000,000
Alabama	8,145,000,000		
Texas	6,897,000,000	Total	199,539,000,000
North Carolina....	4,004,000,000		

Four years have passed since the government's estimate was made, and of course some oak has been cut since then. The total so cut is approximately 18,000,000,000 feet, and that deducted from

the reported stand four years ago leaves in round numbers 181,000,000,000 feet of oak now standing in the forests of the United States. That figure is conservative, for the growth of this wood since the estimate was made has amounted to half of the cut. It is still more conservative because the accompanying table takes no account of oak in several states, among which are Minnesota, Wisconsin, Michigan, New Jersey, Iowa, and the whole western half of the United States. It would be conservative to place the remaining stand of commercial oak in this country at this time at more than two hundred billion feet.

At the present rate of cutting there is enough of it to last forty years; and at the end of forty years enough more will have come on to last twenty years longer.

NO SCARCITY IN SUPPLY

In face of these figures it is ridiculous to claim that oak cannot be had in sufficient quantities to meet the government's war demands. It is true that the government wants a pretty high grade of stock, but even at that there is enough many times over.

The only trouble is in getting it out of the woods, through the saw mills, through the dry kilns, and into the factories where it is to be converted into vehicles and other stores wanted by the government. It will cost money to do this, with labor and supplies at their present high level; but it can be had if the proper steps are taken to get it.

It is estimated that the common white oak, *Quercus alba*, nearly equals in quantity all the other oaks combined, and this white oak heads the whole oak list in point of quality, and it grows in one-half of the area of the whole United States. There can be no question that this single species could much more than meet the government's whole demand for oak in its war program.

New Export Items

There are some new items separately classified for the first time during the last six months of the calendar year 1917 in our export business, which are of particular interest to the hardwood trade. Among these new items to receive recognition by separate classification are handles, boat oars, chairs and office furniture.

Implement and tool handles have been separately listed for the first time and this separate classification gives us the first concrete idea of the exact value of our handle exports, which run now to a little better than a million dollars a year. It has been known for some time that we export something near half of our hickory handles, but exact figures on the export trade were not available because of no separate classification. Now there is a separate classification of implement and tool handles, of which we exported during the half year from July 1 to the end of 1917 a total of \$554,258 worth, which would indicate a million dollars or more for the year's trade in those handles included in this specification. There are evidently many others classed as woodenware, and still others go along with tools sent abroad.

Boat oars and paddles were exported during the last six months of 1917 to a total value of \$126,356.

Two interesting sub-classifications of furniture are made, one of chairs and one of office furniture. The result shows that chairs are perhaps the most important single item in furniture. The chairs exported during the last half of 1917 were valued at \$741,240, which would indicate a total of a million and a half dollars during the calendar year. When we consider that the total furniture trade for the year was only a little above \$4,000,000 this chair item becomes quite interesting.

Office and store furniture, showed for a six months' period a total of \$256,154, which would indicate a half million dollars for the year. It appears that chairs and office furniture constitute items of American manufacture that make a particularly strong appeal in other parts of the world, and the setting forth of these items separately should serve as an encouragement to this branch of the export trade.

Partially Lift Memphis Embargo

There is notable improvement in the embargo situation through the Memphis gateway as outlined in the following circular letter sent to members of the Southern Hardwood Traffic Association under date of April 1:

From points on the Illinois Central and connections:

Effective today, embargoes are further modified to permit acceptance of shipments (of lumber) for points on the Pennsylvania railroad, east of Pittsburgh, with the exception of New York City and Baltimore.

From points on the Missouri Pacific system and connections:

The Missouri Pacific can now handle shipments (of lumber) to points east of the Pennsylvania-Ohio state line, to the same points as are shown to be open via the Illinois Central. It can also handle shipments to points on the Pennsylvania railroad east of Pittsburgh with the exception of New York City and Baltimore.

From points on the St. Louis Southwestern (Cotton Belt) and the Frisco system and connections:

Same as on the Missouri Pacific system.

This is the first time in a long while that it has been possible for hardwood operators on either the east side or the west side to send shipments of lumber through to destination in Eastern Trunk Line territory and they are taking as full advantage as possible of this change in conditions. Indeed, it has been well nigh impossible recently to make shipments into much of Central Freight Association territory but the latter is now practically wide open and operators are likewise taking full advantage of the change in this respect.

It is still impossible to reach New York, Baltimore and other port cities on the north Atlantic coast without permits but officials of the association say that permits can be secured for handling shipments to these, with the result that the situation is declared materially improved.

But, just when embargoes are being lifted and open routes are being provided, there is an admitted shortage of cars for loading with lumber. This is preventing as large movement of lumber as desired. Furthermore, it is suggested that, with more routes being opened up and with increasing quantities of hardwood lumber offered for shipment, the car situation is almost certain to become considerably worse. This is only another way of saying that lumber interests are swapping open routes for car shortage and that their transportation troubles are by no means ended as a result of the lifting of embargoes to the important outlets already indicated.

There has been a decided increase in the number of flat cars offered by the Missouri Pacific system for log handling recently, not only to Memphis and Helena but to other points on that line. This information comes direct from the offices of the Southern Hardwood Traffic Association. Mills dependent on that road for logs are therefore faring much better.

There has been no improvement, however, in log handling on the Yazoo & Mississippi Valley line of the Illinois Central or on the Frisco system in Arkansas. The management of the former has been promising more cars for some time but these have not yet been provided. The Valley Log Loading Company is operating at about half of its capacity with the machines now employed. It can make no better showing for the reason that cars are not being provided by the Y. & M. V. road. As a result mills dependent on that line are very short of logs despite the fact that there are millions of feet of timber on the right of way awaiting immediate handling. And, because of inability to secure full supplies of logs, mills at Memphis and elsewhere in the valley, dependent on that particular road for their log supplies, are still having to operate on partial time. This means that production, so far as these mills are concerned, is sharply below normal.

Owing to the fact that mills bringing out their logs by water are able to operate at capacity; owing to the fact that firms using

their own railway and logging facilities are able to secure full supplies of timber for their mills, and owing still further to the improvement on the Iron Mountain, production of hardwood lumber is increasing somewhat above the recent average in this territory. Still it is materially below what it should be under present conditions.

Logs are beginning to suffer from attacks from worms and insects and there is an admitted slowing down of logging operations because prospects are no brighter than they are for moving the timber already awaiting loading. Weather conditions are fine for logging and this work would be making far greater progress if owners of timber saw any chance of moving this. But they are naturally timid about preparing more material for the worms and insects when they have so much already exposed to the depredations of these pests.

Wood as Fuel

Figures show that more wood is used as fuel in this country than is sawed into lumber. The lumberman has been held up to view as the greatest forest destroyer, but he does not take as much from the forest as is taken for fuel. The lumber cut is about 40,000,000,000 feet a year, while if the amount of wood fuel is reduced to board measure it exceeds 50,000,000,000 feet. The quantity is placed at 83,000,000 cords, or nearly a cord for every person.

The value of a fuel is measured by the quantity of heat given off in the process of burning. There is great difference in woods in that respect. Any person accustomed to use various woods as fuel, knows that some kinds give much more heat than others. Theoretically, the fuel values of woods which are dry are in proportion to their weight, with the proviso that, weight for weight, resinous softwoods like yellow pine, give ten percent more heat per pound than the hardwoods. The difference is due to the burning of the resin, of which hardwoods have little or none. If the theory holds true, the fuel value of a dry wood may be determined by weighing it. If persimmon is twice as heavy as basswood it should furnish twice as much heat. That is the theory, but it is not easy to convince some people that it will hold true in practice.

It is too easy for them to cite their own experience to the contrary, when, on cold days, they shiver round a fire which hums pretty well but refuses to give off much heat that can be noticed.

Green wood develops as much heat while burning as the same wood can furnish when dry. That statement would be disputed by many persons who have had experience in firing with wood; but the apparent difference in the fuel value of green wood and dry is explained by the fact that in the combustion of green fuel, much of the heat is required to evaporate the water in the wood, and thus is not available for ordinary heating purposes. A fire that is fed with soggy wood gives off little heat because nearly all is required to drive off the water in the form of steam. Beech, birch, maple and hickory are among the best fuel woods of this country, and they are among the heaviest, but doubtless oak is more largely used for fuel than any other kind of wood.

THE ABOVE IS A REPRODUCTION OF A COPPER RING TAKEN FROM THE FINGER OF A GERMAN OFFICER BY ROY COOKSTON, FORMERLY OF THE UTLEY-HOLLOWAY COMPANY, CHICAGO. THE RING WAS EVIDENTLY MADE FROM A PART OF A SHELL, AND THE CROSS IS PROBABLY WORN HERE INSTEAD OF ON THE CUSTOMARY PIN.

The Lumberman's Round Table

Red Gum for Paneling

The new Woods Theater in Chicago, one of the finest playhouses recently erected, is notable for the handsome panels which adorn its lobby. These panels, which are exceptionally large in size, are made of figured gum, and the effect is remarkable. Many people take them for Circassian walnut, and while the figure is hardly extreme enough to suggest Circassian to anyone acquainted with that wood, it is undeniably striking. The panels are given a rubbed finish, the natural color of the wood being preserved, so that the admiration which the woodwork has excited is a tribute to the beauty of gum.

If anyone had said ten years ago that the finest theater in Chicago would be trimmed in gum, and that figured gum panels would be regarded as the height of beauty in woodwork, the chances are that that individual would have been derided. Yet that very thing has happened.

Selling in the Building Field

In view of the generally reduced operations of the builders, as a result, largely, of the discouragement given building by Secretary McAdoo and other government officials, who believe that money should not be invested at this time in building construction, it is up to the manufacturer of doors and other wood products used in building to study his market carefully in order to be able to get results from his sales promotion efforts.

One well-known Wisconsin door manufacturer, who has been selling his product in all directions for a number of years, has scanned the field and has found that hospitals are about the only class of buildings which are being erected in the customary number. Owing to the necessary character of these structures, there is no ban on their erection; besides, the war seems to have stimulated giving for charitable purposes, and the hospitals are having comparatively little trouble in raising funds. Hence many new buildings are being erected, and additions provided for established institutions.

The door concern referred to has a large line, of course, but just now most of its advertising is confined to a series of flush doors especially suitable for hospital work. In fact, in all of its advertising to architects it is featuring this door, realizing that this is the line of least resistance, and that there will be more opportunities to specify hospital doors than any other kind at this time.

By looking over the situation and analyzing market conditions, it is possible for the manufacturer to expend his effort in a way to produce the maximum measure of returns.

The Stock of the Factory

Although one has got in the habit of supposing that furniture manufacturers no longer carry big stocks, trips to various consuming plants indicate that the average concern is still finding it highly desirable to have a fairly good sized stock on its own yard, where it can put its hands on the material at any time.

Theoretically, the manufacturer of wood products who figures his operations so carefully as to be able to take his lumber out of the cars, shoot it into the kilns, and move it from the kilns to the machine room, is in the best possible position, because he is not tying up much of his capital in raw material. But in practice it is very difficult to make delivery coincide exactly with manufacturing necessities, and it is important to have an anchor to windward in the form of an adequate stock of dry lumber on the yard.

The writer recently visited a large Chicago furniture factory, which uses a big quantity of oak and other lumber. It has on hand close to a million feet of lumber, which is on sticks, getting ready for use. The head of the factory admitted that this stock represented a lot of money; likewise, that it was necessary to have a big investment in land, for yard purposes, in order to take care of this stock.

"But we find it is a good thing to do," he added, "especially in times such as we have been experiencing. Cars have been scarce,

and deliveries of lumber have been somewhat uncertain. The result is that we have drawn heavily on our reserve stock. It costs more to carry the lumber, but it is mighty fine to have it on hand when it is needed."

Being able to let the other fellow carry the stock will be accomplished when the industrial millennium arrives.

Using Water Transportation

Railway congestion and shortage of rolling stock are making shippers and receivers of lumber give more consideration to the use of waterways for the movement of stock. Comparatively little use has been made of the available resources, and for this reason additional facilities have not been developed. Much can be done along this line.

For example, a factory in Chicago, which is located on the Chicago river, and could easily receive lumber from boats, is arranging this season for the first time to have lumber shipped in by water. The material will be moved from ports on Lake Michigan and docked right at the factory, saving a big amount in freights, and also making a movement that for convenience could not be surpassed. It is expected that the use of this method of delivery will save a big amount in transportation charges in the course of a single season. There is no reason advanced for not having done this heretofore.

In the South a good many sporadic efforts have been made to employ the rivers for this purpose. Logging is, of course, accomplished in this way in many instances, and in others the finished lumber could be moved out by steamboat and barge if the effort were made. But not many people have tried to do this.

Up to this time railroad competition has been aimed to suppress river transportation. Under government control and supervision, the railroads should encourage river traffic, and should cooperate with them in such a way as to encourage this mode of transportation. It will relieve the pressure on the transportation system.

Why Advertise Now?

A certain lumber manufacturer, who is cutting a lot of stock at present, but is devoting practically all of his attention to government work, is observed to be doing just as much advertising as he ever did, and to be spending just as much effort on getting the right kind of "copy" before the trade.

One of his friends inquired the reason for this system.

"We don't want to be forgotten by any of our good customers," he said. "We haven't a great deal to offer at present, and are not in a position to solicit new business in volume, but we know that conditions at present are abnormal. If we wait for normal times to return before we do any advertising, we will have lost a lot of ground, and will have a great deal of impetus to restore to our sales work. Inasmuch as our salesmen are not on the road at present, and we are not reminding our customers through them of our business and facilities, it is all the more important to talk to the trade by means of the printed word.

Why the Jobber Lasts

One of the best known concerns in the Ohio Valley, which formerly operated a mill, is now doing strictly a jobbing business on ash. It is assembling stocks made on a great many mills, and is specializing to such an extent that it is becoming very well known among buyers of ash. Ash is one of those woods which is scattered, as to growth. There are no forests of ash, where a mill can be established to cut nothing else; but each manufacturer gets a little of it. In a case of this kind the jobber is a very important factor in the trade, since he brings together the product of many mills, and makes it possible for the buyer to get just what he wants, without having to take a lot of stock that he doesn't want. There are many other examples of jobbers' service, but this is one of the best ways to demonstrate that it would be impossible to eliminate the jobbing yard from the hardwood business.

The Mail Bag

B-1185—Wants to Buy Thick Hardwoods

The following inquiry comes from a firm outside of the vehicle line. Anyone desiring the same may have it by writing **HARDWOOD RECORD**:

Kansas City, Mo., April 5, 1918, Editor **HARDWOOD RECORD**: We are extensive users of oak, ash and other hardwoods in timbers 3"x8"-14' and 16' and would thank you for list of firms who are in position to make shipment of such material.

Manufacturing Co.

B-1186—Slayton Petition Merely Formality

The following letter regarding an item appearing in **HARDWOOD RECORD** a short time ago explains itself:

Chicago, Ill., April 8, 1918, Editor **HARDWOOD RECORD**: Several weeks ago you showed in your issue an involuntary petition in bankruptcy had been filed against us.

This was filed by a former employee who had a contested account, as he had a contract to purchase stock and having failed to do so the company held some money back for its protection.

This matter has now been adjusted and the petition in bankruptcy has been dismissed.

Will you please be kind enough to show this in your next issue in order that the matter may be corrected, which is to the interest of all concerned?

Very truly yours,

R. R. SLAYTON MILL COMPANY,
1241-1249 Belmont Ave.

Clubs and Associations

Traffic Association Grows Fast

The Southern Hardwood Traffic Association is enjoying the greatest growth in its history. The membership committee, of which C. R. Tustin is chairman, recently announced that it proposed to secure fifty members from January 15, 1918, to January 15 next year but it has made such splendid progress that it has raised its limit for the year to 100.

Since January 1, the association has received thirty members. Two of these were obtained before the annual meeting, January 15. The other twenty-eight have been received since the annual meeting, as follows:

Bradley Lumber Company, Greenwood, Miss.
The Brewer-Nienstedt Lumber Company, Miltenberg, La.
Colfax Hardwood Lumber Company, Colfax, La.
H. W. Darby Hardwood Company, Memphis, Tenn.
Hemphill Lumber Company, Kennett, Mo.
Jefferson Hardwood Lumber Company, Pine Bluff, Ark.
Maley & Wertz, Evansville, Ind.
L. D. Murrelle Lumber Company, Memphis, Tenn.
Perkins Brothers, Kelso, Ark.
McCollum Brothers, Memphis, Tenn.
Booker Box Company, Louisville, Ky.
Bomer-Blanks Lumber Company, Blanks, La.
Forest Lumber Company, Meridian, Miss.
Kentucky Lumber Company, Lexington, Ky.
Wilson & Cochran, Lottic, La.
Mossman Lumber Company, Memphis, Tenn.
Alexandria Cooperage & Lumber Company, Alexandria, La.
I. B. Wilcox & Co., Louisville, Ky.
Lyon Lumber Company, Garyville, La.
Bennett & Witte, Memphis, Tenn.
D. H. Hall Lumber Company, New Albany, Miss.
E. H. Elsberry, Pine Bluff, Ark.
Gibson, Douglass & Gray, Monroe, La.
Evansville Band Mill Company, Evansville, Ind.
Ferd Brenner Lumber Company, Alexandria, La.
Evansville Veneer Company, Evansville, Ind.
Lee Wilson & Company, Wilson, Ark.
Philip A. Ryan Lumber Company, Lufkin, Tex.

There are few organizations identified with the hardwood trade that have accomplished so much in behalf of their members as has the Southern Hardwood Traffic Association, and this splendid record of substantial achievement is responsible for the present rapid growth in its membership.

Applications are being received almost every day, as those outside the fold are beginning to appreciate the handicap under which they are placed by not being identified with this organization. They have to compete with those who are members and they are finding the "going" pretty hard.

Logging Meeting for Memphis

James Boyd, secretary of the Southern Logging Association, with headquarters at New Orleans, announced, while in Memphis last Friday, that V. C. Langley, president of that association, had called a meeting of that body for the Hotel Chisca, Memphis, April 25, at which time the following subjects will be discussed, with particular reference to logging hardwoods:

Tree cutting, building main line and spur roads, skidding by machinery and teams, loading, feeding and care of work animals, feeding and housing of labor, and welfare work.

Mr. Boyd also stated that data sheets had been mailed to more than

400 operations in the Memphis and valley territory and that these are coming into his office now in large numbers.

He also stated that logging contractors are invited to attend this meeting.

Meeting of Louisville Club

The first April meeting of the Louisville Hardwood Club, held on the evening of April 2, at the Seelbach Hotel, was well attended there also being several guests present, including J. Van Norman, a prominent local lawyer who features Interstate Commerce cases principally for the coal and lumber interests; J. H. Townshend, of Memphis, head of the Southern Hardwood Traffic Association; and Norman Willis, Kansas City representative of the Holly Ridge Lumber Company, of Louisville.

Mr. Norman was forced to leave the meeting shortly after the dinner and was unable to talk. Mr. Townshend discussed traffic conditions, stating that embargoes had been lifted to all Central Freight Association territory, and parts of the East, and that he did not figure that there would be much trouble for a time at least in handling shipments into C. F. A. territory, but that there would be trouble on Eastern shipments throughout the year, as embargoes would probably not be off for any length of time, and probably there would be a car shortage throughout the year.

Clifford I. Milard, of Norfolk, Va., a lumberman who has been taking much interest in the work of the "War Savings" Committee, in a letter addressed to A. E. Norman, Jr., president of the Louisville Hardwood Club, asked that the Louisville lumbermen donate any advertising space which they might be able to dispense with for a month, to advertising "war savings stamps." The members of the club present arranged to donate all such space for the purpose, and undertook to take the matter up with other members who were not present, with the result that the Louisville hardwood trade will be doing its bit shortly in encouraging this movement. The trade has already done much, it having in many instances donated cards and stamps to mill and other employees, a number of concerns having a 100 per cent savings record.

In the general round table discussion of the market and general conditions statements made showed that the demand was generally good, that most concerns could sell more lumber than they could secure, and that jobbers were having considerable trouble in replenishing over sold lines. It was stated that prices are better and gradually working higher, all items being in fair shape.

One dealer stated that he moved more lumber in March than during any month since last September, and that it was the best month out of eighteen months from a standpoint of dollars and cents, although the tonnage was not so great, although prices were high enough to offset the difference in tonnage. This dealer stated that stocks in the South were generally lower than at any time inside of eighteen months, with a general shortage of labor and logs, which was not aiding in increasing production.

Members present were generally of the opinion that it was more a question of getting labor and logs than of getting business, as at the present time it is a question of getting logs in, getting 'em cut, and getting the lumber out. Almost any price can be had for immediate delivery lumber, due to an abnormal demand. Several men stated that they had sold lumber at the highest prices ever obtained, and from general reports March proved a bully good month, and the best by far of the quarter.

Big Open Price Meeting Scheduled for Laurel, Miss.

The Hardwood Manufacturers' Association of the United States announces that a big meeting is scheduled for Laurel, Miss., on Saturday, April 20. All hardwood mills within range of one hundred and fifty miles of Laurel are invited. The open competition plan of the Hardwood Manufacturers' Association will be explained at this gathering, at which many prominent members of the plan will be present.

The Laurel meeting is inspired by the success which has attended various meetings at other points, such, for instance, as Cincinnati, Huntington, W. Va., Memphis, and Alexandria, La. The purpose of the meeting at Laurel is to co-operate with the southeastern mills in the work the association is doing for the industry through its open competition plan. It is expected that the report of the cost committee appointed at the open competition meeting at Huntington, March 20, will be in readiness and that valuable information on cost will be available to manufacturers attending the meeting at Laurel. The meeting will be held in the Pinehurst Hotel. Other meetings scheduled by the open competition plan members are Hotel Frederic, Huntington, W. Va., Wednesday, April 17; Hotel Youree, Shreveport, La., Wednesday, April 24.

The cost committee appointed at the recent Huntington meeting held an all-day session at Huntington, Saturday, March 30. Several matters were thrashed out. The committee agreed on cards of accounts covering labor and supplies in different manufacturing departments, and an accountant will be selected and employed who will immediately start work with a view of having data for presentation at coming meetings. It is expected that the accountant will use the cards of accounts as a basis and will personally visit the manufacturers, working up the schedule of items to be charged, so that when a charging plan is adopted by the association, the labor and supplies cost account card of every mill will be prepared on the same basis.

Furniture Federation Meeting in Chicago

The annual meeting of the Federation of Furniture Manufacturers will be held at the Congress Hotel at Chicago, April 17 and 18. All furniture

and supply manufacturers are invited to attend. Speakers of note will address the meeting and the gathering will afford an opportunity for getting together for thorough study of the many new problems confronting the business. The war service committee will make a full report of war contract matters and prospective work that is developing.

The banquet will be held at 6:30 p. m. on Wednesday, April 17. The meeting will be held on Thursday, April 18, when matters of transportation, war contracts, etc., will be discussed. It is purposed to consider reorganization of the Federation on more elaborate and more effective lines.

Memphis Club Meets

There were seventy-five members of the Lumbermen's Club present at the regular semi-monthly meeting held at the Hotel Gayoso, Saturday afternoon, March 30. The usual luncheon was served. President J. F. McSweyn occupied the chair.

It was announced that, in accordance with action taken at the previous meeting, the club would hold its next meeting Friday evening, April 12, at the Memphis Country Club and that it would have as its guests on that occasion the Rotary Club of Memphis. Invitations have been extended to the latter and the getting-together is for the purpose of bringing about closer business and social relations between these two organizations. The idea was suggested by Earl Palmer, chairman of the civic committee of the Lumbermen's Club.

Announcement was made of the death of Mrs. Charles G. Kadel, wife of a former president of this organization. The resolutions committee was instructed to convey to Mr. Kadel the sympathies of the club in his bereavement. A handsome floral offering was also sent.

S. B. Anderson urged that all members of the club attend the meeting to be held at the Chamber of Commerce, Tuesday evening designed to find a way for bringing about employment of the many idle men in Memphis who are contributing nothing toward the winning of the war. All employers of labor are expected to attend. Mr. Anderson stated that the labor situation was growing in both intensity and acuteness and declared that the time had come when those who were not employed should be given to understand that they are badly needed and that they must either work or move on.

It was announced at this meeting that forty-three members of the club have attained membership in the "\$1000 Club" by buying \$1000 worth of thrift stamps. The committee, of which J. F. McSweyn is chairman, is trying to increase the number to 100%.

Thomas W. Fry of the Charles F. Luehrmann Hardwood Lumber Company, St. Louis, and G. W. Everts of the Brown Land & Lumber Company, Rhinelander, Wis., were elected active members. Two more applications were filed. The roster is now close to 200.

Proper steps were taken at this meeting looking to increasing the dues to an extent that will give the club all the funds needed for carrying on its work as well as for entertainment purposes. Twenty-five dollars is the level at which these dues will doubtless be fixed for active members and \$15 for associate members.

Rev. William White, one of the four-minute men of Memphis, delivered a powerful address on Liberty bonds and told the lumbermen that they should support the forthcoming issue to the limit of their ability in recognition of the fact that every American owes a debt of gratitude and loyalty to the French and to the English that cannot be repaid, and because the government is entitled to every dollar that Americans can spare. He particularly urged that men of means would have to be buyers of the forthcoming issue because the smaller investors bought so freely of the last issue and had not yet completed payments on the bonds for which they subscribed at that time.

Proper Methods for Obtaining Shipping Space

The woodstock committee, representing the National Implement and Vehicle Association and other vehicle manufacturers, has sent out the following bulletin for the purpose of giving information regarding equipment for shipping materials:

1. To correct an impression which apparently exists in the minds of some of the station agents of interested carriers with respect to furnishing railway equipment for and moving woodstock or lumber which is not being shipped on government bills of lading, the attached letter from the director general of railroads, together with the following statement from the director of inland transportation, War Department, is submitted:

"The Division of inland transportation has issued no instructions which interfere with the normal handling of matters pertaining to car supply and movement, between the shipper and the carrier's agents. No instructions have been issued to justify a contrary understanding."

2. By conference with the proper government officials it is clearly developed that there is no intention on the part of the United States railroad administration, nor the War Department, to interfere with normal commercial shipments.

3. When equipment is required, requests should be made therefore in the manner which has heretofore prevailed. If there is any failure to provide the necessary equipment or effect its movement, every effort should be made by the shipper with the division freight agents, superintendents or other officials of the carriers interested, to produce the results desired. It is suggested that where difficulty is encountered the presentation of the attached copy of letter from the director general of railroads will be of value.

4. No action will be taken by the director of inland transportation until every effort to produce results has been exhausted, and then only in connection with shipments where the proper relation to the government is already established.

5. If, because of embargoes, issued by the carriers, congestion, failure to furnish cars or other causes, carriers fail to provide cars or transport

NATIONAL WHOLESALE LUMBER DEALERS' ASSOCIATION BANQUET, WALDORF-ASTORIA HOTEL, NEW YORK CITY, MARCH 27

property when for use in the transportation of war necessities and immediate movement of the material. The War Department will interest itself in obtaining the necessary transportation services when statements of facts are submitted by the railroad association to the War Department contractor. For example: When the contractor has exhausted all reasonable efforts to accommodate the material to be furnished upon orders from the War Department, the contractor should immediately advise the depot quartermaster, Jeffersonville, Ind., for attention, Captain J. V. Biggert, giving him full reasons given by the railroad for failure to furnish the cars, name of the point of origin, railroad and shipper, destination, name of consignee, kind of material and the number and type of cars required. Desired route should also be indicated.

6. If trouble is encountered in getting cars for woodstock or lumber which is to be used in meeting commercial requirements give the information in the same manner as outlined in paragraph 5 to the regional director for the territory in which the shipment originates according to the following division of territory and other conditions justifying action will be taken to furnish and move equipment:

A. H. Smith, Grand Central Terminal, New York City for Eastern Railroads: All railroads in that portion of the United States north of the Ohio and Potomac rivers and east of Lake Michigan and the Indiana-Illinois state line; also those railroads in Illinois extending into that state from points east of the Indiana-Illinois state line; also the Chesapeake & Ohio, Norfolk & Western and the Virginian railroads.

C. H. Markham, Healy Building, Atlanta, Ga., for Southern Railroads: All railroads in that portion of the United States south of the Ohio and Potomac rivers and east of the Mississippi river, except the Chesapeake & Ohio, Norfolk & Western and the Virginian railroads; and also those railroads in Illinois and Indiana extending into those states from points south of the Ohio river.

R. H. Ashton, 226 West Jackson Street, Chicago, Ill., for Western Railroads: All railroads in that portion of the above definitions and, broadly speaking, all railroads in the territory west of Lake Michigan and of the Indiana-Illinois state line to the Ohio river and west of the Mississippi river from the Ohio river to the Gulf of Mexico, excepting those railroads in Illinois included in eastern territory, and those railroads in Illinois and Indiana included in southern territory, as above stated.

Association Prices Issued

Market analysis for March issued by the Hardwood Manufacturers' Association shows continued upward movement in hardwood values. Figures f. o. b. Cincinnati show quartered white oak FAS 6" and up the following figures: For 4 4, 5 4, 6 4 and 8 4, respectively, \$90, \$95, \$95 and \$98; quartered red oak, FAS straight grade, \$80, \$83, \$83, \$87, while plain white and red oak in FAS brings \$66, \$70, \$75 and \$80. In this item the greater thicknesses, 10 4, 12 4, 14 4 and 16 4, bring respectively \$85, \$90, \$95 and \$95.

In poplar FAS 7 to 17" shows prices 4 4 to 16 4 ranging from \$72 to \$95, with \$5 spread between 4 4 and 5 4. Saps and selects range from \$56 to \$81, with \$4 spread between 4 4 and 5 4.

Gum, FAS quartered red, shows \$51 for 4 4, \$53 for 5 4 and 6 4 and \$56 for 8 4. No. 1 common quartered red shows \$40, \$42, \$42 and \$44. FAS plain red shows \$46, \$48, \$48 and \$52. No. 1 common plain red shows \$36, \$38, \$38 and \$40. No. 2 common, plain red shows \$28 and \$30. These gum prices are f. o. b. Cairo.

Protest on Bulk Heading Order

J. H. Townshend, secretary-manager of the Southern Hardwood Traffic Association, announces that the Illinois Central has issued an order modifying its bulkheading ruling so that bulkheading must be provided for all dressed hardwood lumber shipped in open equipment, effective at once. The cost is estimated at \$30 per car.

The first order covered all lumber shipped in open equipment. The association protested against this and the order was so modified as to exempt hardwood lumber. The Southern Pine Association secured a modification that exempted certain classes of pine lumber.

The latest order provides for bulkheading in the case of all dressed

lumber, whether pine or hardwood, and the two associations will attempt to secure exemption or they will insist that the railroad bear whatever expenses are incident to such bulkheading. They have no objection whatever to the work but they object seriously to bearing the cost, feeling that the railroad should reimburse their members for every dollar involved.

Neither association is satisfied with the present stake-allowance of 500 pounds. Both hold that this is entirely inadequate and they will co-operate with a view to securing a larger allowance while they are working on the bulkheading proposition which has been made an issue by this latest order.

Cutting Fine Missouri Walnut

The St. Louis Lumber says that according to news from Chillicothe, that state, loggers in the employ of a local gunstock company began work at that point recently clearing the walnut from the Howdshell forest, south of Excelsior Springs. This forest contains what is said to be one of the biggest, if not the biggest, walnut tree in the United States. It measures seven feet in diameter, is forty feet to the first limb, and forty-eight inches in diameter at the first limb. R. L. Odell, who negotiated the purchase of the timber for the company, estimates this tree to be valued at about \$2,000. The gunstock company is under contract to furnish gunstocks for the United States government. This walnut grove has been one of the prize tracts for several years past, and only recently has been placed on the market. It has been in possession of the Howdshell family for about 100 years. The present owners are the Misses Amanda and Martha Howdshell. They were born and reared on the place, and the forest of almost 500 acres has been held by the family largely as a matter of sentiment up to this time. The women decided to part with the property only when they became convinced that it was their patriotic duty to place the timber at the disposal of the United States government and its allies.

With the Trade

Making Progress in Foreign Investigation

The report contained in this issue of HARDWOOD RECORD from John R. Walker, lumber commissioner in England, that he had arranged for a very prominent exhibit of American lumber is but one indication of many that has come from foreign countries visited that the four lumber commissioners are making excellent progress in their investigation of prospective foreign market. Having this in mind, Russe & Burgess, Inc., Memphis, who are very prominent in export circles, forwarded to HARDWOOD RECORD photographs from which the accompanying illustrations were reproduced. These photographs were taken in the Russe & Burgess yard, Memphis, Tenn., last spring when the four commissioners, John R. Walker, Nelson C. Brown, Roger E. Simmons and Mr. Oxholm, were making a tour of mills in this country preparatory to leaving for foreign countries.

Incidentally, the "innards" of the Kraetzer preparation on the Russe & Burgess yard are pretty well shown in the photograph in which W. H. Russe is shown standing at the mouth of the huge boiler. The photograph also shows members of the commission who have just been making a careful analysis of the character of timber cut at Russe & Burgess' big Memphis mill. The Russe & Burgess plant was given a good deal of attention because of the prominence of this concern in export work. They cut a regular line of southern lumber, but have made a specialty of thin

W. H. Russe and his preparator

Showing lumber commissioners now abroad

... and have a large quantity of one quarter inch quartered and plain white oak now in their sheds.

Grand Rapids Veneer Works Issues Dry Kiln Booklet

A booklet describing the Grand Rapids vapor kilns has just been issued by the Grand Rapids Veneer Works, Grand Rapids, Mich. The booklet is amply illustrated, not only to show the actual working of the kiln, but to bring home principles through simple illustration of similar principles which govern in every day occurrences. The booklet contains a good deal of practical information on dry kilns and kiln drying. It gives suggestions for forms for keeping record of dry kiln operation and lists various instruments recommended for dry kiln work.

Organize New Company in Charleston, W. Va.

H. C. Dunfee, formerly of the American Column & Lumber Company and later with Thos. Hall Lumber Company, respectively of St. Albans and Charleston, W. Va., has organized and is the owner of the Dunfee Lumber Company, which has a rating of \$40,000. The company will manufacture lumber and handle the output of several small mills in the Charleston section. Its total output will be from 15 to 20 million feet of West Virginia lumber. It will supply regular trade and also handle a good deal of government stuff as well as mine lumber. The company will shortly install a sawmill on a tract of timber which it has purchased on the Kanawha & Michigan railroad.

Established Lumber Department

The Mercereau-Hawkins Tie Company of Huntington, W. Va., has established a Lumber department in addition to its cross tie business, and will hereafter handle all kinds of hardwood lumber.

C. W. Peters, formerly of C. W. Peters Lumber Company of Columbus, Ohio, is manager of this department.

A West Virginia Mill Changes Hands

The sawmill at Clover Lick, West Virginia, formerly owned by N. S. Wise & Sons, has been purchased by A. D. Neill, president of the North Fork Lumber Company. Mr. Neill owns a tract of 5,000 acres of timber near the mill which he has bought, and it is estimated that it will keep the mill supplied for five or six years.

Pertinent Information

Wood Exports for January

The Bureau of Foreign and Domestic Commerce has published figures showing the January exports of wood products from this country with data for January of last year for the purposes of comparison. The statistics follow:

Article.	Jan. 1917.	Jan. 1918.
Round logs	\$ 42,436	\$ 45,358
Square logs	127,314	89,215
Railroad ties	221,740	204,647
Cypress lumber	9,337	220,701
Fir	363,371	457,179
Gum	35,201	106,124
Oak	99,567	241,226
White pine	109,065	59,751
Yellow pine	836,747	1,106,346
Poplar	7,016	95,659
Redwood	82,509	45,091
Spruce	207,057	395,498
Total lumber	\$1,873,705	\$3,225,705

The total exports of lumber for January this year were nearly double what they were for the corresponding month of 1917. Other exports of forest products follows:

Article.	Jan. 1917.	Jan. 1918.
Wooden furniture	\$ 333,303	\$ 376,392
Handles	93,827	93,827
Barrels	51,678	44,543
Box shooks	164,564	318,294
Barrel shooks	361,431	361,431
Staves	350,340	277,847
Heading	12,389	33,551
House trim	32,340	20,398
Woodenware	23,746	26,072
Wood pulp	187,129	281,908
Total of all wood manufactures.....	\$4,598,867	\$6,198,216

Wood Bridges

That wooden trestles are much more economical than those of concrete is the decision arrived at by a committee of the American Railway Engineering Association after an exhaustive investigation.

The report of Committee No. 7 on wooden bridges and trestles, submitted to the recent convention of the association at the Coliseum in Chicago, and adopted by the association, says:

Cresoted timber trestles are more economical than concrete except when the cost of the concrete structure is less than one and one-half times the cost of the wooden structure.

Forty Billion Feet Cut in 1917

Almost forty billion feet of lumber—enough to build 2,000,000 bungalows—was produced in the United States during the year 1917, according to a preliminary estimate made by the Forest Service. The estimate is based on the reports of 17,000 mills made to the Forest Service and the National Lumber Manufacturers' Association. An equal number of mills are yet to report to these agencies, but it is not expected that the subsequent reports will alter this estimate radically.

It is significant to note, however, that the reports of approximately 700 mills whose production is almost equal to the aggregate production of the remaining 17,000 other mills show that the total of lumber cut of these mills in 1917 was 600,000,000 feet less than the total shipped. This is ascribed to labor conditions principally.

The government's war time demands for lumber require an accurate census both of last year's production and of the mills capacities for 1918 and so officials of both agencies in charge of the work are urging the delinquent mills to report as soon as possible.

The estimate is based upon the reported cut of 845 identical sawmills each of which cut 5,000,000 feet or more lumber in either 1917 or the preceding year. The reports of these mills indicate that in nine states there was an increase in production and in the rest of the country a decrease. The largest increase was in Missouri where the gain over the 1916 cut was almost 44 per cent. In the South, Louisiana, Georgia, Florida, and Alabama showed increases varying up to about 10 per cent. Wisconsin and Michigan, in the North, and Washington and Oregon in the Northwest, were the only other states in which the cut increased. North Carolina, with a decrease of more than 22 per cent, showed the greatest falling off in production. Maine had a shortage of about 20 per cent. The reports from other states indicate varying percentages of decrease, with an average for all states of two per cent.

Specifications for Cutting Shuttle Wood

In the haste to produce quantity in normal specifications of lumber, many opportunities are overlooked for getting out specialized items in which there is a good margin of profit if their manufacture is properly supervised. One of these is material from which shuttles used in the vast textile industry are manufactured. Practically all of these shuttles are now made from dogwood. The supply of dogwood for shuttle blocks would be materially augmented were the specifications more generally known, and to this end a prominent shuttle manufacturer has prepared specifications given herewith. A great many lumber companies could probably find profit in getting out dogwood shuttle blocks.

The blocks must be cut to measure full size when the wood is so thoroughly dried that forced drying will not make it lose weight. To obtain the dry size of

14 1/2 x 1 3/4 x 1 1/2, cut the block 15 x 2 x 1 3/4, size No. 0.
15 1 1/2 x 1 1/2, cut the block 15 1/2 x 2 1/8 x 1 1/8, size No. 1.
16 x 2 x 1 3/4, cut the block 16 1/2 x 2 1/4 x 2, size No. 2.
16 x 2 x 2, cut the block 16 1/2 x 2 1/4 x 2 1/4, size No. 3.
16 1/2 x 2 1/4 x 1 1/2, cut the block 17 x 2 3/8 x 1 1/2, size No. 4.
17 1/2 x 2 1/4 x 1 1/4, cut the block 18 x 2 1/2 x 2, size No. 5.
19 x 2 1/4 x 2, cut the block 19 1/2 x 2 1/2 x 2 1/4, size No. 6.
21 x 2 1/2 x 2 1/4, cut the block 21 1/2 x 2 1/8 x 2 3/8, size No. 7.
23 x 2 3/4 x 2 1/2, cut the block 23 1/2 x 3 1/8 x 2 1/8, size No. 8.

Blocks should be stacked up for at least sixty days to allow partial seasoning and the development of imperfections which one cannot detect in the green block. As each and every shuttle must be absolutely perfect to avoid injuring delicate fabrics in the weaving, perfect blocks only can be used. Costly delays and damages to warp (this refers to fabric) are caused when shuttles of second quality are put in the loom. So each and every block must be perfect in quality and correctly sawn and absolutely free from knots, checks, heart, redwood, cross grain, bark and "cat-faces." The proper method of sawing is shown in the accompanying illustration. The center or the pith of the heart must be entirely outside of the block. Furthermore, from a selling standpoint, it is best to remove this pith in order to prevent total loss of the block through splitting by quick checking.

It is a waste of time to saw anything but absolutely straight grain material, and the blocks must be sawed straight with the grain, otherwise they will be worthless.

Immediately after sawing, each end of the block should be dipped an inch deep in paraffine or paraffine mixed with rosin to prevent checking. The finished block should be packed in burlap bags and each bag marked with a tag showing the quantity and size of blocks contained.

Interesting Information

M. Wulpi, commissioner of the Central Bureau of Casket Manufacturers, Chicago, has issued an interesting circular containing statistics on Japan, gathered by the New York Evening Post. Mr. Wulpi presents the statistics in a circular, believing they form a basis for careful study by those anticipating competition in foreign markets after the war. According to the figures Japan has:

- Fifty-three million population existing on 147,655 square miles.
- Three hundred and forty-two population to the square mile.
- Twelve million living in cities, the balance in villages and mostly farms.
- The government of Japan is the largest industrial enterprise in the world.
- It operates the largest Japanese steel mills and 85 per cent of the railroads.
- Manages telegraphs and telephones and manufactures army and navy equipment.
- It exercises but little control over private enterprises.
- There are almost no factory laws beyond elementary regulation.
- The tariff is made to favor Japan industries.
- Taxes on business are low.
- Average rate of interest 10 per cent in 1908 to 7 per cent in 1915.
- Average dividends 1906: banks 9.2, railroads 6.7, manufacturing 14.6.
- Labor is practically unorganized.
- Wages low, but labor very inefficient.

Waterway Tonnage Reaches Immense Figure

The National Rivers and Harbors Congress, Washington, D. C., issues a most interesting statement of inland water haulage in support of its propaganda for scientific development of our inland waterways. The statement says:

Three hundred and seventy-six million tons of freight were handled on the waterways of the United States in 1916. That is enough to fill 9,400,000 average forty-ton freight cars, or about four times as many cars as our railroads own today. That shows that the waterways are still of some service even after fifty years of cut-throat competition by the railroads.

For the past eighteen months the traffic history of this country has been one continuous succession of delays, congestion, embargoes and car shortage. On May 1 and again on November 1 last year shippers asked for more than 165,000 cars which could not be supplied. Then came a winter of extraordinary severity and a coal shortage which amounted to a national disaster.

In a table prepared for Secretary McAdoo by W. P. Manss, industrial agent of the Baltimore & Ohio Railroad, it is estimated that in eighteen of the principal manufacturing cities of the country the losses resulting from Dr. Garfield's celebrated order amounted in workmen's wages and manufacturers' products to \$4,344,070,000. The total losses since the car shortage began, in September, 1916, are probably not less than \$8,000,000,000, and may be as much as \$10,000,000,000.

Bad as was this huge financial loss, the sickness, suffering and death due to lack of coal—which was due to lack of cars—were vastly worse. Worst of all was the delay in shipment of supplies and munitions which were urgently needed by our own Army and Navy at the front and by those with whom we fight. At one time no less than 213 ships, loaded and ready to sail, were held in New York for lack of bunker coal.

We have hundreds of harbors and 28,000 miles of waterways classed as navigable, of which less than 2,000 miles have been sufficiently improved to have dependable channels. One-tenth of the amount lost by the people of the United States during the last eighteen months would have been more than enough to thoroughly improve every mile of our navigable waterways, and if that had been done, and we had been wise enough to foster and develop water transportation, instead of allowing it to be crushed by railway competition, there would have been no car shortage, no coal shortage, no staggering financial loss, no peril to our armies and our cause through delays to ships, and many homes would still be bright which today are full of sorrow.

The Rivers and Harbors bill which provides for the maintenance and improvement of our waterways and harbors is of interest to every citizen of the United States, to those who live upon the prairies or among the mountains no less than to those who live by ocean, lake or river. Every thousand, or million, or hundred million, tons of freight sent by water leaves freight cars free to serve those whom the waterways cannot reach. Manufacturer and mechanic, merchant and clerk, farmer and miner, every mother with a son now, or soon to be, in France, and every loyal citizen who wants to win this war should do everything possible to make it sure that our waterways and harbors are maintained, improved and used to the limit of their capacity.

Hints for Expediting Mail Service

Everyone has probably noticed the delays in mail delivery incident to the abnormal conditions prevailing throughout the country. The postoffice department has just sent out a statement explaining the difficulties and suggesting means by which movement may be expedited.

The causes to which the delays are attributed are speeding up of war shipments, which materially reduces facilities for postal transportation; great increases in bulk of mailing and practices with business houses in regard to hours of mailing, for instance, the common practice of holding outgoing mail until the late afternoon necessitating handling sixty or eighty per cent of the matter within a period of three or four hours. It is apparent that if this could be spread over twelve or fourteen hours it would be handled much more efficiently, and that much time will be gained in its forwarding.

The department suggests the advisability of signing and preparing for dispatch all letters and mail accumulating up to noon and of posting them at that time, thereby assuring their being in transit before the close of the business day.

It also suggests that all heavy accumulation of mail be properly assorted as to size of containers and properly "faced" for cancellation of stamps.

Wagon Figures Include All Contracts Let

The woodstock committee of the vehicle interests through A. B. Thielens, chairman, makes the following statement regarding the number of contracts for army wagons:

In several publications reference has been made to the equivalent of from 240,000 to 260,000 army wagons without explaining that this is the total quantity, including spare parts, that has been ordered from the beginning of the war for requirements up to June, 1919.

The report then goes on to state that this creates a wrong impression in the minds of some as to the immediate requirements, and does not take into consideration the number of wagons which have already been delivered, of which there are several thousand now in warehouses awaiting distribution. The report states that it is desirable to give this information to the lumber people so as to avoid disappointment if contractors are unable to give them orders.

The statement says further:

Anyone that can produce material suitable for this work, if not already supplied with a list for the recommended prices, will be furnished same upon application to the Woodstock Committee, 619 LaFayette St., South Bend, Ind. If prices are acceptable to him, upon committee being so advised together with information in regard to his facilities and approximate time when deliveries can begin, information will be given to all contractors of record with the committee.

It is, of course, obvious from this report, as well as from other indications, that the vast bulk of these wagons must yet be built, and it is not likely that the quantity of lumber estimated as being necessary for the lumbermen to furnish will be materially reduced by the number of wagons already manufactured. Obviously such a huge total order for wagons would not call for immediate delivery, and even with fifteen months leeway for completion would necessitate rush work. Hence it is hardly likely that the lumbermen's plans for supplying raw material needed will be appreciably altered by the announcement that the wagons contracted for cover a year's requirements. This seems especially true, as undoubtedly most lumbermen realize, that at least a year's requirements must be involved in such an enormous production.

A Large English Oak

An English trade paper has the following account of an oak of unusual size. The peculiar thing about it is that the tree was only 400 years old, which is less than might be expected of an oak of its size:

The following is a description of the Golenos oak, felled and converted in the year 1810. It grew about four miles from the town of Newport, in Monmouthshire. The main trunk, at 10 feet long, produced 450 cubic feet, one limb 355 cubic feet, one limb 472, one limb 235, one limb 156, one limb 133, and six other limbs of inferior size averaged 93 feet each, making the whole number of 2,426 cubic feet, equivalent to 19,408 surface feet, of sound and convertible timber. The bark was estimated at six tons, but as some of the very heavy body bark was stolen out of the barge at Newport, the exact weight is not known. Five men were twenty-five days stripping and cutting down the tree; and a pair of sawyers were five months converting it, without losing a day (Sunday excepted). The money paid for converting only, independent of the expense of carriage, was \$140, and the whole produce of the tree when brought to market was within a trifle of \$3,000. It was bought standing for \$2,025; the main trunk was 9½ feet in diameter, and in sawing it through a stone was discovered 6 feet from the ground, about a yard in the body, through which the saw cut; the stone was about 6 inches in diameter, and completely shut in, but round it there was not the slightest symptom of decay. The rings in its butt were carefully reckoned, and amounted to above 400 in number, a convincing proof that this tree was in an improving state for upwards of 400 years; and as the ends of some of its branches were decayed and had dropped off, it is presumed that it had stood a great number of years after it had attained maturity.

Progress in Ship Building

Two hundred wooden ships of the American merchant fleet, with which the United States will nullify the activities of the kaiser's submarines, should be in the water by June 30, and a total of 434 already are scheduled for construction. These and many other facts indicating how gigantic is our shipbuilding program and how rapidly it is being carried out were disclosed at the annual meeting of the Southern Pine Association by J. O. Heyworth, director of the wood ship division of the Emergency Fleet Corporation. No man need be ashamed of the production of southern pine for government uses during the last six or seven months, Mr. Heyworth told the convention. The West is abundantly doing its share also. The schedules for wooden ships call for more than 365,000,000 feet of lumber. Two hundred and forty million feet already have been delivered.

Arranges for Exhibit of American Lumber in London

War Commissioner John R. Walker, who is investigating economic conditions in England in behalf of the lumber trade of this country, reports that he has arranged for excellent quarters for proposed American lumber exhibit in London in a large room in the Royal Institute of the British Architects. This he says in a recent letter is the very best location that could be found anywhere in the Kingdom. The arrangements for the exhibit will be handled by prominent men in England and Mr. Walker feels that tangible results are in sight.

He emphasizes the hope that nothing will delay the assembling and forwarding of the exhibits, full details of which he has worked out and sent to this side.

Various American lumber associations have for some time been working out the details through the Bureau of Foreign and Domestic Commerce of exhibits already arranged that will soon be forwarded to the other side. exact duplicates will be assembled and forwarded to France within the near future.

Foreign View of American Shipbuilding

The London Timber Trades Journal gives its own opinion and quotes from the opinions of others on the subject of shipbuilding in the United States. It says:

Probably in order that too great hopes may not be raised, our ministers have lately been rather making our flesh creep by references to the difficulty which America is having in keeping abreast of her estimates in the way of shipbuilding. The accounts in the American trade papers certainly do not give this impression, but rather afford hopes of even greater results than those which have been promised. On this question, we publish, in our North of Europe Notes, translated extracts from an article in a Swedish paper giving the views of a Norwegian shipowner on the probabilities of tonnage supplies after the war. From this it will be seen that the smaller neutral countries view with concern the prospects opened up by the enormous efforts which are being made by American shipbuilders. The idea which the Norwegian shipowner puts forth of an excess of tonnage after the war is quite a novelty, but, so far from feeling alarmed at the prospect, which is purely a shipowner's point of view, it is clear that the world's trade and a quick return to something like normal conditions depend more than anything else on a sufficiency of tonnage during the critical period of the early days of peace. America need not have any fear of overdoing the shipbuilding industry, as there will certainly be a demand for every boat that can be built for many years to come.

The Work of Fungus

Nearly every sawmill man knows that blue and sapstained lumber is the work of fungus that grows on the surface and among the fibers of the wood and changes its color. The thing that puzzles many people is, how does the fungus get there in such quantities and so quickly? A gangway of freshly cut lumber will be stained in a day or two of damp weather.

The work is done by the spores or seeds of fungus that float through the air and light on the surface of the damp wood, where they quickly sprout and send their roots into the wood. They are small plants and the sprouting spore goes through the operation about as a bean does. In warm weather in wooded regions the air is full of them, though, because of their small size, they escape notice. Their numbers are almost beyond the power of the imagination. A single shelf fungus or punk, the kind that grows on old logs, stumps and trees, will throw off spores at the rate of 8,000,000 an hour and keep it up for a long period. Thus a single punk the size of a man's hand will scatter enough spores in a season to supply fifty to every acre of ground in the United States, if they were equally distributed. A hundred such punks may occur on a square rod of forest, or even on a single tree. Besides that, there are hundreds of other kinds of fungi, all scattering spores at the same rate. There are 8,000 species of fungus known in the United States. That is more than a dozen kinds for every kind of forest tree.

The spores scattered abroad are too small to be seen individually, but they are present. It is safe to say that if all the people in the world were brought together, the number would be much short of the number of spores which fall in one day on a single square rod of many a lumber yard.

It is no wonder that the lumber sap stains and blues. The only wonder is that a square inch of it ever escapes. Fortunately, conditions must be exactly right or the spores will not germinate. They will not grow if they fall on stone, clay or any substance which does not contain their kind of food. In addition to that, the condition of dampness must be just right. In warm, dry weather the spores cannot germinate and they quickly die. They do their worst in warm, damp weather.

The Bootjack Comes Back

The war has brought the bootjack back. The army officer must have the assistance of this bifurcated machine in removing his footgear, and the leading hotels are hastily laying in a supply. It is found that the industry of manufacturing bootjacks had to be built from the ground up, because the long bootless period that has just come to a close had put all the jack makers out of business. For years there had been no sale of bootjacks except in Texas where the boot continued to hold its footing in spite of changes in customs elsewhere. Two or three of the large New York hotels always kept jacks for the benefit of booted travelers from Texas during their New York visits. But all is changed now, and the bootjack, like the Adirondack beaver, "has come back to its old stamping ground."

Non-Splintering Timber

Willow is used for cricket bats and cottonwood for bottoms of barrows for wheeling brick and stone because these woods are not liable to split and splinter when they receive sharp blows. Neither do they dent deeply. Tupelo is in favor for warehouse floors where the fall of heavy articles with sharp corners is to be expected. The wood is not easily scarred because indentations quickly close on account of the tupelo's tough and fibrous character. It was formerly the custom to line wooden battleships with heavy mahogany planks, because cannon balls would pass through that wood without tearing off large splinters to fly across the decks. In the days of whale hunting with hand harpoons, the whale boat with red cedar planking was preferred, though a very soft wood. A blow from a whale's tail, during a fight, simply broke a hole in the side which could be temporarily stopped with a mat or a coat; but most woods under such treatment would be splintered beyond repair. Lignum-vitae bowling balls are nearly as hard to split as balls of solid rubber. The black gum mauls with which the pioneers split millions of fence rails were not very hard, but it was next to impossible to burst one of them by pounding the heads of iron wedges.

Telegraph Company's Liability

Where loss was entailed upon plaintiff lumber company by negligence of defendant telegraph company in making a telegraphic quotation on lumber read \$20 per thousand, instead of \$22, the defendant's liability for the loss was not avoided by a condition on the telegraph blank purporting to limit the defendant's liability to the toll paid for sending the message, such provision being invalid as an attempt on the telegraph company's part to avoid its responsibility for its own negligence. (Mississippi supreme court, Warren-Goodwin Lumber Co. vs. Postal Telegraph-Cable Co., 77 Southern Reporter, 601.)

EPITOMON'S NOTE.—As to interstate messages this decision cannot safely be followed, for recent decisions of the federal courts have established the rule that in the case of unrepeatable messages telegraph companies may validly restrict their liability to the amount of tolls paid for its transmission.

Philippine Vermilion

The vermilion or padouk of commerce has hitherto come from Anadama islands and the neighboring coast of India; but it is said there is a supply in the Philippine islands which has been used only locally. There are three species which botanists distinguish, but wood-users can see no difference. This does not imply that the woods are all of one color. The fact is, they vary in a remarkable degree. The differences are due to soil and situation. Wood growing in one place may be of quite different appearance from the same species growing elsewhere. Colors range from very pale yellow through all shades of salmon and red to deep red. The wood shrinks but little and warps scarcely any. It is easy to work, has a pleasant odor, possesses a beautiful grain, and in its native home the lumber is insect-proof. It is in much demand locally. One-piece round tables are oftener of this wood than of any other. The trees are widely dispersed over the islands and are abundant. The natives call it narra.

Hardwood News Notes

◀ MISCELLANEOUS ▶

The capital stock of the following Indiana concerns has been increased: That of the Klammer Goebel Furniture Company, Evansville, to \$150,000, and that of the Banta Furniture Company, Goshen, to \$100,000.

The Jeffris Lumber Company, Jeffris, La., has filed an involuntary petition in bankruptcy.

The Aprin Hardwood Lumber Company, Atlanta, Wis., is reported to have sustained a loss by fire.

The Virginia Car Furniture & Lumber Manufacturing Company, Roanoke Rapids, N. C., has been incorporated.

The death is announced of Thomas R. Winfield, president of the Cole Manufacturing Company, Memphis, Tenn.

The capital stock of the Gillet Manufacturing Company, Clio, Mich., has been increased to \$100,000.

An application for dissolution of corporation has been filed by the Stark-Lambert Lumber Company, Beaumont, Tex., and the company will liquidate.

The A. B. Anderson Lumber Company, Asheville, N. C., recently began business, as has the Scott Barker Lumber Company, Charlotte, N. C.

The Waterman Lumber Company, Blocker, Tex., recently had a fire.

At Galveston, Tex., the Galveston Dry Dock & Construction Company has incorporated with \$500,000 capital.

The New London Milling Company, with a capitalization of \$100,000, is doing business at New London, N. C.

The Utley-Holloway Saw Mill Company has incorporated at Clayton, La. The capitalization of the Arkansas Oak Flooring Company, Pine Bluff, Ark., has been increased from \$50,000 to \$75,000, and that of the Continental Car Company, Louisville, Ky., to \$200,000 from half that amount.

The Gulf Coast Hardwood Milling Company recently began business at Houston, Tex., with mill at Sweeney.

Hardwood News Notes

< CHICAGO >

The following prominent lumbermen are attending the meeting of the Chamber of Commerce of the United States, this city, April 10, 11 and 12: J. W. McClure, Memphis, for the American Hardwood Manufacturers' Association; S. B. Anderson, Memphis, director of the Chamber of Commerce; F. R. Babcock, Pittsburgh, Pa., representing the National Wholesale Lumber Dealers' Association, and C. R. Mengel, Louisville, Ky., for the Board of Trade of that city.

HARDWOOD RECORD has received a pamphlet entitled "The Industrial Resources and Opportunities of the South," compiled by Arthur D. Little, Inc., Boston, Mass. The pamphlet is well worth the attention of anybody interested in this question.

The Hoo-Hoo officers have announced that the Morrison Hotel, Chicago, will be the headquarters of the big Hoo-Hoo annual to be held on the ninth of next September. Local Hoo-Hoo will have ample time to arrange for entertainment that will make the coming annual a record-breaker; and they are already at work to this end.

The Lumbermen's Association of Chicago is one of the most active of local trade bodies in behalf of the Third Liberty Loan. The association's War Board is organized for the big drive and is already doing valiant and effective work. It is confidently expected that when the campaign is over the Chicago lumber trade will have made a showing satisfactory to everybody concerned.

One of the big events of last week in Chicago lumber circles was the talk given at the association luncheon last Thursday by S. J. Duncan-Clark, war correspondent for the Chicago Evening Post. Mr. Clark told vividly of conditions confronting the allied cause and announcement of his prospective appearance brought out a big and interested crowd.

The Chicago association has just issued the Lumbermen's Log for 1918, containing full information regarding the personnel of the association and its divisions, giving membership of various committees and reproducing reports of officers and committee chairmen for the year 1917.

Members of the American Walnut Manufacturers' Association met in Chicago last week for discussion of conditions within the industry. A number of the walnut men present when interviewed relative to the rumored scarcity of walnut, were emphatic in their assertions that such rumors are not only vicious but baseless and that the walnut manufacturers are amply able to supply all needs for gun stocks, propellers and other war needs. And that the actual stand of walnut would not be seriously affected by their doing so. The most serious obstacle in the way of getting out walnut logs is the attitude of many people owning desirable stands or trees who for speculative reasons or because of direct desire to obstruct the government or because sentimental attachment for the trees exceeds their patriotism are holding on to highly desirable supplies. Such people might do well to emulate the example of the many who have, in the national cause, laid aside the sentiment which has from generation to generation bound them to trees which literally have grown up with their respective families. Prominent walnut men who were present were: J. N. Penrod, Frank Purcell and J. C. Rodahaffer, Kansas City; R. E. Pickrel, St. Louis; V. L. Clark, Des Moines; Geo. W. Hartzell, Piqua, O.; H. B. Sale, Ft. Wayne; Louis Moschel, Pekin, Ill.; W. A. MacLean, New Albany, Ind.

Excitement was rife in the offices of the National Hardwood Lumber Association a week ago Monday when on opening up it was discovered that someone had pilfered Liberty Bonds and stamps valued at \$800 from the office vault. The bonds were owned by members of the office force.

Among prominent northern visitors in Chicago last week were: R. B. Goodman of Marinette and G. W. Jones and H. C. Humphrey of the G. W. Jones Lumber Company, Appleton, Wis. Subsequently to Mr. Goodman's visit it was announced that the annual convention of the National Lumber Manufacturers' Association of which he is acting president, had been postponed to May 7 and 8.

Jones, Coates and Bailey, prominent in box circles in Chicago have sold out their box and shoo department to the Republic Box Company.

< BUFFALO >

The election of Horace F. Taylor to the presidency of the National Wholesale Lumber Dealers' Association is very satisfactory to the Buffalo trade, as he has always been popular as president of the Lumber Exchange, and his re-election last month was a special compliment, because the rule of giving two terms has not always been followed. Though the choice was a regular promotion from the first vice-presidency, Mr. Taylor did not agree to accept it until strongly urged by the Buffalo lumbermen who were in attendance at the meeting. That he followed another Buffalonian, M. E. Freisch, into the office is not as unusual as it may seem, because Mr. Freisch is a member of the Tonawanda trade.

Representative Waldow has been trying in Congress to get for Buffalo part of the \$50,000,000 housing appropriation. He offered an amendment, the effect of which would have been to insure part of the money being spent

here, but this was voted down because of the unwillingness to mention any city by name, leaving the distribution to the administration. Mr. Waldow said that Buffalo contractors have less work than they usually have at this time, although the city has need of houses for munition plant workers.

East Jordan Lumber Co.
Manufacturers "IMPERIAL" Maple Flooring
East Jordan Michigan

Lumber Company, was one of the young men to leave here for military service on April 2, the contingent going to Camp Dix.

The Standard Hardwood Lumber Company is about to start upon the erection of a new dry kiln to replace the one which was recently destroyed by fire. The company has a large demand from the local trade for dry kiln service.

Fred M. Sullivan has been spending some days at Camp Hancock, Augusta, Ga., where he is visiting his son, Lieut. F. Fleming Sullivan, who expects soon to go to France.

Canadian consumers of hardwoods are having a good deal of difficulty in getting their orders filled these days, particularly where the lumber is not intended for war order plants. The government is frowning upon the shipment of stock for regular woodworking lines and is denying permits without taking the trouble to express its regrets. The hardwoods can, of course, be put to excellent use in the United States, and this fact is recognized by the lumbermen, who, however, are sorry that war must force them to turn down orders from old customers across the line.

Davenport & Ridley are getting quite a stock of crating lumber from Canada, mostly white pine, and this business is said to be fully up to that in the hardwood line.

Building permits in Buffalo are comparing favorably with last year so far, but planing mills and retailers say that their trade is not yet showing much increase in activity.

← PITTSBURGH →

Quite a number of Pittsburgh wholesalers went down to New York recently to attend the convention of the National Wholesale Lumber Dealers' Association, as follows: Fred R. Babcock of the Babcock Lumber Company, W. H. McGowan of the Allegheny Lumber Company, H. F. Domhoff of the Acorn Lumber Company, C. V. McCreight of the Ricks-McCreight Lumber Company, Alex. Willson of Willson Brothers, F. E. Lillo of the Terhune Lumber Company, Walter Rodgers of the Empire Lumber Company and Edward Eiler.

The Kendall Lumber Company is pushing its hardwood operation as much as it can in the face of unsatisfactory labor conditions, poor shipments and especially of poor and irregular demand for stock. Its mills are still running, although it finds that business in some lines, especially with the mining companies, is falling off somewhat this month.

The American Lumber & Manufacturing Company is rushing business down at its hardwood plant at Lenox, Ky., in order to get out its big shipments on government contracts for shipbuilding material. President W. D. Johnston is spending a good deal of his time at the different plants of the company.

The Acorn Lumber Company reports business only fair. It takes a lot of plugging to "get 'em across," as President Domhoff remarks. Demand for hardwood is away better than for every line of lumber, but says prices are very satisfactory. In fact they are much at the wholesaler's option, if he has the stuff.

The Frampton-Foster Lumber Company is taking the output of a large number of country mills and is making a specialty of oak. Possibly no other concern in the city is so well equipped to furnish oak on short notice as this mighty live "cover," which started in business in one room in the Bessemer building some five years ago and now has its offices stretched clear across one side of that big building.

Building additions in Pittsburgh are extremely unfavorable. Very few large contracts are being let and those jobs which usually call for a big lot of hardwood are held up in architects' offices or even before they are put on to the boards. There is very little encouragement in sight in this respect and wholesalers are gradually coming down to the belief that this will be a very badly off year in the hardwood lumber business here.

← BOSTON →

The New England trade should note the action of the Interstate Commerce Commission in again suspending the required cancellation of the proposed stop-over and reconignment tariffs to May 1.

A strong effort to place a large representation of lumber dealers in the All-America parade at Boston had to be given up; the disparity in the available contingent was so marked when it became known that 80,000 participants had already entered that the authorities of the wholesale and retail associations in Boston felt that it was manifestly impractical to make a proper showing of the lumbermen.

Wm. E. Litchfield of Boston has been selected as delegate from the Massachusetts Wholesale Lumber Association, Inc., to the annual meeting of the Chamber of Commerce of U. S. A. at Chicago, April 10.

← BALTIMORE →

The Mann & Parker Lumber Company, this city, has heard from H. T. Snyder, who was formerly in its employ as salesman and buyer, and who last year joined the forestry regiment in training at the Washington university. Mr. Snyder was shortly afterward made top sergeant, and in course of time was sent to France, along with the others of his command. He is in Company C, Third Battalion, being the supply sergeant, and he writes giving considerable information about the work of the regiment behind the lines. The regiment is engaged in cutting railroad ties and other timber for the use of the fighting forces, and he states that the

mechanical equipment is very complete, with the exception of an edger, for which there does not appear to be any use, since nothing is wasted, and use is made of every portion of the tree. By means of cross-cut saws the ends are squared. As for the general conditions, he seems to find them very acceptable, stating that he is in excellent health, though obliged to work hard.

There seems to be no prospect of Maryland and especially the eastern shore getting additional contracts for wooden vessels from the government. This discouraging information was brought to Annapolis last week by Secretary of State Simmons, who, with a delegation from Dorchester county, called on Chairman Hurley of the United States Shipping Board at Washington, to seek such contracts. Accompanying Mr. Simmons were former State Senator W. F. Applegarth, W. Vernon Bradley secretary of the Cambridge Board of Trade; W. Irving Mace of Cambridge, and Charles N. Crowe, a former resident of Dorchester, but now a shipbuilder in Texas. Mr. Hurley told the visitors that because of the lack of transportation facilities, it would be impossible to enter extensively upon wooden shipbuilding on the eastern shore.

F. T. Staats of New York, representing the Laurel River Lumber and Logging Company of Stackhouse, N. C., was in Baltimore last week not so much to look after orders as to get in touch with officials of railroads and see about permits to have lumber shipped from the mills. He indicated that his conferences with the railroad officials had been comparatively satisfactory, and further dropped the hint that writing is generally wasted, letters being productive of little more than the reply that the letters would receive due consideration, whereas personal appeals frequently brought tangible results.

Among those who attended the annual meeting of the National Wholesale Lumber Dealers' Association in New York last week was John L. Alcock of John L. Alcock & Co. He declared himself as greatly impressed with the dignity and the importance of the gathering, from which much is expected in the way of concrete results for the benefit of the lumber trade. He said that the banquet was a most imposing affair, a large number of ladies being present, and that the closest attention was given to the speakers. The attendance was large and the deliberations were followed with the deepest interest, contrary to the general impression that business men from a distance go to New York mainly to have a good time or get diversions that are usually not accessible to them.

Fire from a passing engine set ablaze the lumber in the yard of the Keystone Manufacturing Company at Todd Siding, W. Va., March 31, causing a loss of not less than \$25,000. It is estimated that 700,000 feet of hardwoods were destroyed.

As an illustration of the rapidity with which hardwoods are going up in price, it is to be mentioned that the latest lists received here from the Case-Fowler Lumber Company of Macon, Ga., one of the largest manufacturers of poplar in the country, show a heavy increase. More than 60 per cent of the items on the list have been marked up from \$8 to \$10 per 1,000 feet, while the rest is advanced from \$2 to \$6. This is the second increase since January, and the prediction is made that the list will go still higher.

Harry Bowers, who had been engaged in the lumber business with his father at Frederick, Md., died April 2 after a long illness. He was fifty-three years old and served for a time as county clerk.

The check upon building here continues, and the total declared value of the new structures for which building permits were issued last month did not exceed \$160,000. This is only a small part of the normal activity and shows strikingly to what extent the builders are being retarded by the scarcity of labor and by the high cost of materials.

← CLEVELAND →

One of the active workers this month in the Third Liberty Loan campaign here is W. B. Martin of the Martin-Barris Company, who has been named a captain of one of the fifteen teams which will cover the Cleveland district.

Of interest to hardwood people here is the appointment of Richard P. Tappenden of East Cleveland as inspector of woods for aeroplanes for the United States Signal Corps. He is a graduate of the forestry school of Ohio State University, and a post-graduate student at Yale University. Mr. Tappenden has been assigned to the factory of the Dayton-Wright Airplane Company at Dayton.

Use of wood in war work is being explained to engineering regiments at military encampments in certain parts of the country by Arch C. Klumph, president of the Cuyahoga Lumber Company, this city. Mr. Klumph has just returned from Camp Sheridan at Montgomery, where he addressed several engineering regiments, and explained the uses of various woods in actual warfare. Mr. Klumph was appointed by the United States government to compile statistics on the use of woods for military purpose and is now completing his findings.

← COLUMBUS →

The report of the city building department for March, 1918, shows a considerable falling off in the value of permits granted as compared with the corresponding month in 1917, but the decrease is not so large as might be expected under the circumstances. The department issued 236 permits, having a valuation of \$378,810, during the month, as compared with 293 permits and a valuation of \$571,245 in March, 1917. For the

first three months of the year 366 permits, having a valuation of \$615,835, were issued, as compared with 169 permits and a valuation of \$931,910 for the corresponding period in 1917.

Archibald P. Davis, a son of A. C. Davis, head of the A. C. Davis Lumber Company, Columbus, has entered the aviation service and is stationed at Vancouver Barracks, Wash., where he is attached to the spruce emergency division.

F. R. Gadd, assistant to the president of the Hardwood Manufacturers' Association of the United States, has notified members that the association has extended the use of its inspection service, free of cost, to the British War Mission, with headquarters at 1202 Munsey building, Washington, D. C., and is ready to issue original certificates of inspection on any government orders, the cost of such inspection to be paid by the shipper. Only actual expenses, no salary, will be assessed members on such work. The British War Mission has accepted the inspection service.

The Peter Kuntz-Hilton Lumber Company, Dayton, has increased its capital from \$5,000 to \$100,000.

The Lowell Planing Mill Company of Lowell, Ohio, has increased its capital from \$25,000 to \$50,000.

George M. Morgan, president of the Cincinnati Lumbermen's Club and Cincinnati manager of the Nicola, Stone & Meyer Company, returned recently from a ten days' trip among mills and timber lands in Tennessee. Mr. Morgan says that there is a strong demand reported at all the mills, but despite this the production is insufficient. This is principally due to a shortage of labor, much of the new labor which has supplanted that part of the lumber employes who have gone to war being for the most part inefficient. Wages are generally high.

The Brasher Lumber Company of Columbus has opened a branch office in Nashville, Tenn., in charge of E. G. Dillow. R. R. Adams, a traveler formerly attached to the Columbus office, is now stationed in Nashville territory.

A change in ownership in the Irwin sawmill of London, Ohio, has taken place when New York parties purchased the property. It will be called the London Hardwood Company, but will not be incorporated for the time being.

The Steubenville Building & Lumber Company of Steubenville, Ohio, has gone out of business.

R. W. Horton of the W. M. Ritter Lumber Company reports a continued strong demand for hardwoods in central Ohio territory. Buying on the part of factories is now the best feature of the trade. Prices are strong and constantly advancing. Shipping is still hampered by embargoes and railroad congestion.

< INDIANAPOLIS >

The Hill-Standard Manufacturing Company of Anderson, Ind., last week purchased the entire stock of the Hazelwood Lumber Company of that city. The Hill-Standard Company is engaged in the manufacture of playground equipment, and with an enlarged plant it was finding it increasingly difficult to obtain a reserve supply of lumber.

The Indiana Hardwood & Manufacturing Company of South Bend, Ind., last week increased the term of its corporate life thirty years.

Indianapolis opened its Liberty bond campaign April 6, with a large parade and patriotic demonstration. One of the largest delegations in the parade from any of the industries was that from the plants of E. C. Atkins & Company. This company had several hundred men in line, carrying large American flags, each of which required the support of from five to seven men to carry.

Edward Maley has resigned as timber buyer for the Thompson Veneer Company of Edinburg, Ind., and has accepted a similar position with the plant of the Emerson-Brantingham Implement Company of Columbus, Ind.

Albert Modlin of Knightstown, Ind., a timber buyer for the Long-Knight Lumber Company of Indianapolis, recently bought a walnut tree at Pershing, Ind., near Richmond, which is said to have been one of the largest walnut trees standing in the state. The tree measured 45 inches in diameter and was capable of producing 3,000 feet of timber. Two days were required to fell the tree and to prepare it for shipment to Indianapolis.

The Millikan-James Hardwood Lumber Company of Indianapolis has reduced its capitalization from \$50,000 to \$10,000.

The Mitchell Hardwood Lumber Company of Mitchell, Ind., has filed certificate of dissolution as a corporation.

The D. L. Conrey Furniture Company of Shelbyville, Ind., has been incorporated with a capitalization of \$50,000. Directors are Jacob A. Conrey, Mary Conrey and Lee C. Davis.

The Central Lumber Company of Indianapolis has been incorporated with a capitalization of \$10,000. Directors are Elmer W. Hughes, Augustus Jennings and Lewis Wallace.

The E. & W. Lumber Company of South Bend, Ind., has increased its capitalization from \$3,000 to \$10,000.

< EVANSVILLE >

The Stout Furniture Company, Salem, Ind., has filed a notice of final dissolution with the secretary of state.

The Third Liberty Loan campaign started in Evansville on Saturday,

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

early fall. It was planned to rebuild at once, but inability to obtain machinery and material in short order has resulted in postponement. It is planned to erect the plant on a larger scale than the old one.

The Embry Box Company, who also operates the Embry Lumber Company, has been developing its two-year-old baby, the Embry Wire Bound Box Company, so rapidly, that the company has just purchased the one-story fireproof warehouse building of the E. G. Duckwell Company, hay and grain dealers, and will convert it into an addition to its box plant.

The wedding of Lieutenant William Johnson, formerly with the office of C. C. Mengel & Bro. Company, Louisville, to Miss Virginia Randall of Louisville, was solemnized at the Second Presbyterian Church in Louisville on April 5. Mr. Johnson was granted a short furlough and will take his bride back to camp with him.

Frank Crosier, formerly with the Mengel Box Company of Louisville, now an aviator at San Antonio, Tex., with the army, is recovering from a serious attack of pneumonia, and is expected to pull through in good shape.

F. W. Adgate, manager for the Foundation Company, of New York, shipbuilders who launched the Coyote, is investigating locations at Louisville, Cincinnati and Paducah, for the purpose of locating an inland plant to manufacture ship parts, river steamers, barges, etc. The company has more than \$30,000,000 worth of government work under contract, and is figuring upon building many parts at some interior point. Mr. Adgate was recently in Louisville and looked over the situation here, and also at Jeffersonville.

From Whitesburg, Ky., it has been reported that the Tug River Lumber Company, has closed a deal for several thousand acres of timberland along Blackberry and John Creeks in Pike County, Ky., much of which represents virgin hard

◀ ARKANSAS ▶

Judge E. A. Rolfe and Dr. O. N. Warren of Forest City, Ark., have recently purchased an 800-acre tract of hardwood timber in East Carroll Parish from R. L. Jurden of Memphis, Tenn., the consideration being \$40,000. A stave mill has been installed and a logging outfit is being shipped to the land. Operations are to begin at once to cut and remove the timber. After that is done the new owners will clear and prepare the lands for use in agriculture.

W. P. Garrison of Batesville, Ark., has recently received a large order for walnut timber to be used in manufacturing aeroplane propellers for the government.

John Martin of Parthenon, Ark., now has a large supply of walnut timber on hand, which is to be sawn and shipped for use in making gun stocks and airplanes for government purposes. He has been making a number of shipments of this kind during the past few months.

The Red River Lumber Company is the name of a new lumber concern which has recently purchased several small hardwood saw mills from the De Queen Lumber Company in the vicinity of Ashdown, Ark. This company also recently moved the old planing mill owned by J. H. Embry from Winthrop to Ashdown.

J. F. McIntyre & Sons, hardwood manufacturers of Pine Bluff and other places in Arkansas, have recently erected a hardwood sawmill on the bank of the Saline River about six miles from Rison, Ark. A tram line from the mill to the Cotton Belt railroad is now being built.

◀ WISCONSIN ▶

The Highway Trailer Company, Edgerton, Wis., has taken a government contract amounting to \$450,000 for the production of trailer trucks for the United States army. The trucks will be built in five, ten and fifteen-ton capacities and are designed both for ordnance and aircraft transportation. Work on the contract already is under way. The Edgerton company accepted the order on a cost plus ten per cent profit basis. James W. Menhall is president and general manager.

The committee of representative Milwaukee business men which is making a canvass to procure subscriptions amounting to \$500,000 for the purpose of establishing an airplane manufacturing plant already has raised a total of \$175,000, and has received so much encouragement that it is expected the remainder will be subscribed within ten days or two weeks' time. The project contemplates the absorption of the Lawson Aircraft Corporation, Green Bay, Wis., and its removal to Milwaukee to form the nucleus of a large airplane industry. At present the company has not available adequate facilities nor capital to develop as rapidly as government needs for aircraft make necessary. Milwaukee woodworking plants are taking a most active part in the promotion of the project.

The Bogges Manufacturing Company, Fond du Lac, Wis., has opened its new plant in the Hase building and is now producing mop wringers and similar devices on a large scale. J. J. Carberry is secretary and treasurer of the company.

The Below Lumber Company, Stanley, Wis., has decided to establish an office in Marinette, Wis., for the purpose of transacting a general lumber brokerage business. The office will be opened June 1 in the Farmers' & Merchants' Bank building and will be in charge of Hiram F. Below, who is moving his residence from Stanley to Marinette. He will be accompanied by several members of the office force at Stanley.

PITTSBURGH, PA.

& St. Paul Railway Company at Milwaukee have started work on the construction of 5,000 freight cars under a certificate of authority just issued by Director General of Railways McAdoo. The entire working forces in both the locomotive and car shops on March 1 were placed on an overtime basis to offset the difficulty in procuring additional help.

The National Toy Manufacturing Company, Milwaukee, has been incorporated with an authorized capital stock of \$15,000 by A. G. Goehner, Henry Goelzer and Oscar J. Goelzer to engage in the production of wooden toys and novelties.

The Pioneer Furniture Company, Eau Claire, Wis., is now employing twenty women in the cabinet and finishing departments in positions formerly occupied exclusively by men. The replacement with women is made necessary by the acute shortage of male help. The women, however, are being employed only in the lighter industrial duties.

The Standard Manufacturing Company, Appleton, Wis., will become one of the largest manufacturers of sash, doors, blinds and other millwork when plant extensions now being undertaken are completed. The work will involve a total expenditure of nearly \$100,000. It includes the erection of a new factory, 120x120 feet in size, and the purchase of machinery costing about \$15,000. Robert O. Schmidt is treasurer of the company.

The Automatic File & Index Company, Green Bay, Wis., has increased its capital stock from \$25,000 to \$150,000 to accommodate the growth of its business and to provide funds for doubling the present capacity of the plant. A two-story addition to the present two-story shop, making a four-story factory, 100x175 feet, and a four-story wing, 24x100 feet, will be erected at once. F. L. G. Straubel is president and general manager of the company.

The Twin Ports Pattern Works, 130 Ogden avenue, Superior, Wis., which manufactures all patterns required by the Globe Shipbuilding Company of Superior, has just completed work on one of the largest and most intricate patterns it has yet built. The model is for a 12½-foot propeller for an ocean-going vessel under construction for the government at the Globe yards.

The Cleveland-Cliffs Iron Company has awarded contracts for the construction and equipment of a new saw and splitting mill costing about \$100,000 in connection with its furnace and chemical plant at Kipling, Delta county, Mich., near Gladstone. An experimental mill has been in operation for the last year and a half. When the new mill is finished, all logs will be shipped direct from the camps to Kipling for reduction into charcoal kiln and retort material. The daily capacity will be 200 cords. Every bit of waste will be utilized by by-product processes.

The Park Falls Lumber Company, Park Falls, Wis., has awarded contracts for about ten miles of cement sidewalk in "White City," the big employes' colony which it has built up within the last two years to provide adequate housing facilities at cost to its workmen and their families.

The Wilbur Company, Milwaukee, has been incorporated with a capital stock of \$25,000 by George H. Wilbur, secretary and treasurer of the Wilbur Lumber Company, 908 Pabst building, Milwaukee, and Ross H. Wilbur. No statement of the new company's purposes is available.

The Collins Lumber Company and the W. H. Stevens Lumber Company, Rhinelander, Wis., encountered strike troubles during the latter part of March, but operations were not seriously interrupted. The demands of the men were rather vague and indefinite, but generally amounted to a request for an increase of twenty-five cents a day in wages.

According to figures which have just become available, a total of 17,000,000 feet of lumber were manufactured in the government sawmills at Neopit, in the Menominee Indian reservation, located between Shawano and Antigo, Wis., during 1917. Indians resident in the reservation received a total wage of \$80,000. The Neopit operation up to January 1 has increased the assets of the Menominee tribe to the extent of the value of the entire manufacturing plant, inventoried at more than \$1,000,000.

The completion of several public school buildings in Milwaukee has been seriously delayed by the inability of the contractors to get delivery of lumber supplies from the South. The Milwaukee board of school directors has appealed to the Milwaukee representatives in Congress to induce Director General of Railways McAdoo to issue priority orders. The lumber is tied up in the yards of the Pioneer Lumber Company, Jackson, Miss.

M. J. Escoll, field collector of the Milwaukee Public Museum staff, delivered an illustrated lecture before the Rotary Club of Milwaukee last week on the life of the lumberjack in the camps of the John Schroeder Lumber Company, Milwaukee. Excellent views of woods operations in the vicinity of Ashland, Wis., were shown. In the course of his lecture Mr. Escoll said that there are 833,000 men employed in the lumber industry of Wisconsin at this time, which means that 20 per cent of all men engaged in manufacturing industries in this state are engaged in the lumber trade. After holding first rank as a producer of lumber from 1900 to 1905, Wisconsin now stands sixth in the list of states in which lumber is cut. Still, at least one-half of the territory embraced by the state of Wisconsin consists of woodlands, Mr. Escoll said, and the state is far from the point of exhaustion of these resources.

Upon the arrival in Wisconsin of Lieut. Grant Stephenson, U. S. N., on April 1, the remains of the Hon. Isaac Stephenson, who died on March 15, were finally committed and sealed in a crypt in the Stephenson mausoleum in Forest Home cemetery, Marinette, Wis. The funeral services were held March 18, and the casket was left in the aisle of the mausoleum pending the coming of the only son, who was called from duty in French waters. Lieutenant Stephenson entered active duty in the United States

navy about nine months ago, and during most of the time since then has been patrolling the French coast. At various times he has been aboard six different warships, ranging from a torpedo boat to a minesweeper. His furlough was for ten days.

The last will and testament of Mr. Stephenson was filed in the probate court at Marinette on March 21. It does not disclose the true value of the estate, but states it exceeds \$1,000,000. Most of the property is left in trust to be divided into equal parts for the benefit of the widow, daughters, living son, and the survivors of deceased son and daughter. The trustees named are H. C. A. J. Upham, Milwaukee; John A. Van Cleve, Harry J. Brown, J. Earl Morgan and Lieut. Grant Stephenson.

The Northern Potash Association, organized several weeks ago at a meeting held in Wausau, Wis., among representatives of potash manufacturers from all parts of northern Wisconsin and upper Michigan, met at Appleton, Wis., on April 4 to discuss proposed tariff rates to be sought in Congress, plans for bettering conditions among employes and market conditions in general. The membership numbers twenty-seven, a gain of seven since the initial meeting.

The Hardwood Market

< CHICAGO >

News that Chicago will get a big share of new government business adds a new reason for confidence on the part of the already optimistic local trade. It is true that no one is counting on much more progress in commercial lines, but the change in local plants, which are rapidly taking on their portions of government business, have filled in very nicely. Now with definite plans for the spending of millions of government money for railway equipment in the Chicago district and the entire likelihood that Chicago's advantages will be turned to account in the shipbuilding program the future looks bright. The latter development would mean more than the building of ships for the yards and considerable parts of the housing would have to first be prepared.

So far as the everyday lines of hardwood buying are concerned, the Chicago trade is keeping right up with the rest. Troubles in finding and securing needed hardwood and veneer stock seem to be holding up the demand from regular woodworkers many of whom are still unable to satisfactorily cover their wants. Direct word from producing fields supports arguments in favor of getting lined up as far ahead as it is safe to figure. The price feature locally is notable for its firmness while demand for most lines is almost without precedent.

< BUFFALO >

The hardwood market shows a good amount of activity, with stocks moving more freely from the yard than a short time ago. The railroads still find it difficult to handle lumber going eastward from here, but by means of the consignees getting permits it has been possible to get quite a little stock forwarded. War order industries are, of course, the leaders in the demand for stock, and many concerns which have been making furniture or something else that is staple in ordinary times are now devoting their attention entirely to making products needed in the war.

The demand covers quite a number of different woods, the main thing being the ability to fill the order at prompt notice. Where this is assured, it is easy to get business at favorable prices. Assortments here are generally in good shape and some yards have the largest stocks they have carried in years, mostly put in some months ago. The general opinion is that the market will continue strong, owing to the shortage of dry stocks at the mills, and that the end of the war will bring about a call for large quantities of stock from regular channels.

The lake trade is soon to open, with considerable hardwood ready to come down, one or two shippers being eager to get in cargoes, because the rail service is so slow. No charters have been made, so far as can be learned, but one vessel owner reports the asking price of \$6.25 on hardwood lumber from Lake Superior to Buffalo, which is certainly enough, considering the quiet state of the trade. It remains to be seen whether the lumber fleet is large enough to meet the wants of shippers. Only one thing is certain and that is that lumbermen would use the rail service if they could get any dispatch. Such hardwoods as maple, birch, elm and black ash will be handled principally by lake this season.

< BOSTON >

Interviews with hardwood men in both branches of the trade disclose no immediate changes in conditions. With values at an abnormal stage, the majority of the trade is looking for a decline, but the amount and time when it may occur are subjects of diverse opinion. The fact that producers of furniture and other products of hardwood have been studying every possible way to evade the consequences of high prices in standard items will have a long continued effect on future usage. The sharp demand at unreasonable prices is admitted to be wholly temporary, although it shows no sign as yet in letting up either as to necessity of the stock or question of value. The whole trade has been for some months awaiting the resumption of shipments which it was indicated by certain trans-

Have you seen any better Walnut logs than these?

THEY all grew right in Indiana where hardwoods have always held the choicest farm lands. The best growth of timber as well as the best yield of wheat comes from good soil. The soundness of the log-ends shows that they fed on the fat of the land. My

portation authorities might be looked for April 1, but up to the present date no such action has developed; on the contrary, the New Haven road has been obliged to extend its prohibition on receiving eastbound cars.

< PITTSBURGH >

Hardwood matters are moving along about as well as could be expected considering the general slump in the lumber business here. Demand is much lighter than it should be at this season. Yard trade is next to nothing. The general tendency in prices is up, but this is caused largely by the bad shipping conditions. Oak is far and away the best seller in the market. Oak timbers are badly wanted and also plank and stock for furniture factories. Automobile trade is away off and wholesalers are not doing much business in this line. Prices of all hardwoods are firm and it is a question of delivery more than of prices with the prospective customers.

< BALTIMORE >

No decisive changes have taken place in the hardwood trade here. The dealers continue to experience the greatest difficulty in getting cars and making shipments, while the mills have their troubles in keeping organizations intact and getting somewhere near the capacity of the plants. Many of the latter, it is to be feared, are so crippled with regard to workers that the cost of manufacturing lumber is carried to altogether inordinate figures. At that there are not lacking opportunities to dispose of stocks as long as these can be delivered. By far the greatest problem in the trade is that of transportation. Hardwood men say they can get plenty of orders, and they are on the lookout for stocks. Contrary to the situation in the yellow pine trade, the demand comes mainly from private sources, the government having use for hardwoods only in limited quantities, and these requirements being confined to a few woods. Because of the checks upon operation at the mills there is no prospect of overproduction, and the mill men regard the situation as being so well in hand that they make further advances in the quotations from time to time. These advances apply to practically the whole list, and there is no one willing to predict that the top limit has been reached. The dealers, for their part, experience more or less unsettlement in their avenues of distribution. Former buyers have to a considerable extent or entirely dropped out of the market, at least for the time being, their business being too much interfered with by war conditions to warrant entering into extensive commitments for lumber. As a result the dealers have had to establish new lines, and a frequent shifting of connections is one of the characteristics of the present situation. For another thing the dealers do not know whether they will have business next week or next month or not. Such orders as come in are for immediate shipment, the buyers being indisposed to anticipate wants and contenting themselves with provision for such needs as come up from day to day. At that the movement has gained somewhat in volume, the railroad situation having shown a measure of improvement. The local yards are making earnest efforts to augment their assortments, and stocks are coming in or going out all the time in a restricted way. Margins of profit for the dealers are attractive, and it is mainly a matter of getting enough shipments off to bring the business up to a fair volume. Exports appear to be no more active than before, and the exporters will probably have to await the end of the war before they can hope to re-establish their former lines and look for a good demand.

< COLUMBUS >

The hardwood trade in Columbus territory has continued firm in every respect during the past fortnight. Buying is good, especially on behalf of the factory trade. Considerable buying by retailers is also reported. The tone of the market is generally good and higher prices are looked for in the immediate future. Lumbermen believe that the early summer trade will be active and preparations have been made to handle a larger volume.

The retail trade is buying both for immediate and deferred delivery. Car shortage is holding up shipments to a large degree, and consequently there is considerable delay in receiving orders placed some time ago. Embargoes on shipments from many southern points are still further complicating the situation. Retail stocks are not very large, although some dealers have been taking advantage of the lull to get in a better stock.

The factory trade is the best feature of the business at this time. Concerns making boxes and implements are good customers, and the same is true of certain other lines of manufacturing, such as furniture and automobile. There is also a good demand for low grade lumber for crates. Prices are strong and all recent advances have been well maintained. This is especially true of quartered and plain oak and poplar. Chestnut is also firm and the same is true of ash and basswood. Collections are slightly improved.

< CLEVELAND >

With prospects for replenishing stocks rather remote, due to the continued poor transportation conditions from the South, hardwoods have firmed in price in the Cleveland market during the past week and several items have taken a jump upward. Oak flooring, hitherto the most active

Item on the list, is the principal material affected. Although no actual change in price on this material has been effected as yet, it is predicted in leading circles that advances must follow shortly. This will be due to the higher cost of the material to the dealers, and the increased difficulties of getting it into this market. Contrary to the general rule, the movement of oak flooring into consuming channels this week is very small, and unless building operations speed up a little there is nothing to indicate phenomenal improvement in the demand. Maple flooring is fairly active, but also fairly plentiful, and stationary as far as price is concerned. Other hardwoods are only moderately active, in fact below normal for this time of year. Cedar has picked up a little, especially for posts, and there is better outlet than would have been expected a fortnight ago. The big production of automobile trucks in this section is affording a big demand for ash for the truck bodies, and this material has firmed up a little under this influence. Improvement in transportation conditions, as indicated by an occasional liting of cargoes for a day or so, is expected to work to the advantage of this market.

◀ INDIANAPOLIS ▶

The hardwood demand continues to become more active, many of the Indiana manufacturers describing the demand as the heaviest in the history of the trade. Manufacturers are stretching every resource to supply their orders with as much speed as possible but embargoes and car shortages continue to be a source of great embarrassment.

Practically all of the plants in central Indiana are being operated to capacity, and timber buyers are unusually active in their attempts to keep the mills supplied with logs. Weather conditions have been favorable this spring to the early operation of plants, the weather during March being particularly favorable. Indiana roads are in excellent condition, permitting the hauling of logs in some counties much earlier than usual.

More cars are available than there have been since early in the winter but the transportation situation as yet has not been relieved. Since the shipment of coal became lighter more cars have been available, and as grain shipments are exceedingly light at this time, many box cars have been turned over for the use of the lumber interests.

The trade generally is complaining of a labor shortage, and a similar complaint is being made by some of the large consuming plants, especially the furniture industries. The furniture factories in central Indiana are busy, and in most cases where they have not enough orders for their products to keep their plants in capacity operation, the manufacturers are able to get government contracts to keep their plants employed.

Many of the consuming industries do not seem to have expected the heavy demand for hardwoods early enough to permit them to lay in surplus supplies of material, and such manufacturers now are making urgent calls on the market.

◀ EVANSVILLE ▶

Trade with the hardwood lumber manufacturers of Evansville and southern Indiana has been rather good during the past ten days or two weeks and in the opinion of manufacturers business is going to remain fairly active all summer and fall, although they are looking for nothing like a boom in trade. The Columbia street mill of Maley and Wertz in this city has been operating on a schedule of thirteen hours a day. Practically all the up-town mills here are running now, while the river mills remain closed down, and it is not known when they will start running again. Manufacturers report that logs are more plentiful but the prices are high, in fact about the highest on record. In many sections of the South the men who generally get out logs, are now beginning to plant their crops and it is expected it will be some time before they will return to logging again. One large hardwood concern in this city reports that it has a good supply of logs on hand now and this with the logs that it expects to get from several timbered tracts in southern Indiana, will last it probably for a year. Some of the other manufacturers, however, are not so fortunate. Lumber prices are holding firm with a tendency to advance even more. Collections are good. General trade conditions in this section are better than they were a month ago. Manufacturers say there is a real labor shortage and this problem is expected to become rather acute before the end of the summer. Farmers are also fearful that they will not be able to get enough help to cultivate their crops this summer. Many of the manufacturing plants in this section are in need of men and some are running on short forces. The demand for the best grades of hardwood lumber remains good. The demand for all woods needed by the federal government in the manufacture of war materials is especially good. Inquiries are good and it is pointed out that in almost every instance lately inquiries have led to orders. Veneer manufacturers report a good trade. Building operations have not improved much during the past few weeks. Sash and door men and planing mill men say that trade is only fair.

◀ MEMPHIS ▶

Demand for hardwood lumber is quite active, according to reports made by prominent manufacturers and distributors here. Orders are apparently very easy to obtain. They are, however, quite difficult to fill because of conditions surrounding both production and distribution of

lumber. The call is particularly insistent for the lower grades of cotton wood and gum which are in rather limited supply and which are wanted by box interests in practically unlimited quantities at the highest price ever paid therefor. There is a notably good call, too, for thick oak, 6/4 and better, and members of the trade are diverting most of their machinery to the production of this class of stock because of the prospect that there will be an unusual demand therefor when the vehicle interests really enter the market in a large way for the stock necessary for manufacturing the army escort wagons for which they have secured contracts from the government. There is comparatively little inch plain oak and what is offering is being taken at a fairly satisfactory rate. Quartered white oak in the higher grades is wanted for various purposes, including the manufacture of airplane propellers. There is also a good demand for yellow poplar, quarter-sawn, for the same purpose. The movement

OAK, ASH and GUM LUMBER

Can furnish anything in Oak, air dried or kiln dried, rough or dressed

MIXED ORDERS OUR SPECIALTY

Of course it is true that **Red Gum**

is America's finest cabinet wood—but

Just as a poor cook will spoil the choicest viands while the experienced chef will turn them into prized delicacies, so it is true that

**The inherently superior qualities
of Red Gum can be brought
out only by proper handling**

When you buy this wood, as when you buy a new machine, you want to feel that you have reason for believing it will be just as represented.

We claim genuine superiority for our Gum. The proof that you can have confidence in this claim is shown by the letter reproduced herewith.

Your interests demand that you remember this proof of our ability to preserve the wonderful qualities of the wood when you again want RED GUM.

Paepcke Leicht Lumber Company
CONWAY BUILDING 111 W. WASHINGTON ST.
CHICAGO, ILL.

Band Mills: Helena and Blytheville, Ark.; Greenville, Miss.

of ash, hickory and elm is reported quite good while prices are well maintained. Sap gum in the higher grades is in active request while there is only a fair call reported for red gum in firsts and seconds. Cotton wood and gum box boards are in large request and in only scant supply, with the result that relations between supply and demand are quite strained and that prices are around the maximum.

◀ LOUISVILLE ▶

There has been very little change noted in the general situation during the past month, other than that there has been some slight improvement in the car supply in the South, but not really enough to make any great difference. The embargo situation is substantially the same as it has been for thirty days. There is a general shortage of log cars, and coal cars are so scarce that even such equipment is hardly to be had. Sidings are full of logs waiting shipment to mills, which are unable to operate full time, due to the inability to obtain logs. It is reported that logs have lain at sidings so long that worms and bugs are beginning to injure them, that is the softer hardwoods. There has been practically no change in the demand, which continues strong for thick stocks of oak and ash for government work, poplar also being active, with walnut in the same steady demand for gun stocks and aeroplane work. Quartered oak and ash are also being used in aeroplane work. Gum is steady and in fair demand for all grades. Poplar is also active and there is a good demand for all grades of veneers. However, shipments are not moving very rapidly, and every mill concern and jobbing house has heavy orders on hand awaiting either cars or lifting of embargoes. Dealers are fighting shy of future orders and contracts of all kinds, as it is generally believed that prices will continue high on all thick stocks, and in fact on all southern hardwoods, due to enforced light production on account of the log situation. Plenty of good saw logs are being gotten out at present prices, but they are doing the mills very little good so long as they are on sidings far removed from the mills.

◀ ST. LOUIS ▶

There is a fairly good demand for all items on the hardwood list. In fact the call is much better than the car situation will permit. Many shippers say that they have enough orders booked to keep them busy for some time, should the car situation not show an improvement. Many of the mills have contracts for government work and they are getting more all the time. The local factory trade is less than it has been owing to the sash and door plants not doing very much business because of the quietness in the building lines. Stocks are continually growing less. This is

particularly true in regard to oak and gum. The two latter items are harder to obtain than for a long time. Firm prices prevail and it is the consensus of opinion among the leading dealers that these prices will continue indefinitely. There is little improvement in shipping conditions, and unless the weather improves they will grow worse instead of better. Cypress in mixed cars is in fairly good call, particularly from the factories. It is believed that the yard trade will shortly show an improvement. Inquiries are growing more numerous. The car situation is not good but an improvement is hoped for. The mills are in a better position to book cypress than ever.

◀ ASHEVILLE ▶

In the last two weeks the worst difficulty experienced by shippers in this section, according to dealers' statements, is that the intermediate railway connections with eastern railways have been unsatisfactory.

Even when the main eastern lines are open, it is said, the trouble is to get the lumber moved by the southern railway. But a number of shipments are going forward to the eastern market. As for intrastate trade, the acceptance of government contracts for wagon and other stock by North Carolina furniture and woodworking factories has stimulated an already large demand in eastern Carolina for hardwoods.

◀ MILWAUKEE ▶

Reports that the War Industries Board at Washington has had issued a priority order prohibiting the shipment by rail of all lumber excepting that destined for plants manufacturing aircraft, vessels, army and navy materials, and that needed for other purposes of the war program did not come as a surprise to the hardwood industry of Wisconsin, according to leading men in the trade. The effect of the order will not alter conditions existing during recent months to any appreciable extent, as a major part of all lumber manufactured and shipped has been virtually on Government account.

The logging season has come to a close in most districts of Northern Wisconsin and the big task now is to get the winter's cut to the mills. A large number of plants which are not provided with facilities for winter sawing operations are rapidly going on the active list. An unfavorable feature is the shortage of competent mill labor. The release of woodmen has provided a fairly large supply of inexperienced help for the time being, but most of it is wholly unsuitable. The stringency of the car situation has been relieved to some extent, but still is acute. However, it is expected that the Government soon will be able to make ample provision for taking care of shipping requirements.

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

The T. Wilce Company

22nd and Throop Sts., CHICAGO, ILL.

SAVE YOUR MONEY BY USING THE

RED BOOK

Published semi-annually in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the line it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany & Qtd.-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

Kerry & Hanson Flooring Co. Grayling, Michigan

We are members of the Maple Flooring Manufacturers Ass'n.

Boarding House Hash

YOU ARE TAKING A CHANCE—

if the stock from which you are purchasing is coated with a nice thick gravy of verbal side-stepping as to what it REALLY is. Why buy from the hash platter on a guess when we have constantly available a solid stock of 15,000,000 feet of UPPER ST. FRANCIS BASIN HARDWOODS that's backed by a reputation?

It all comes from our solid 60,000 acre boundary of timber in S. E. Missouri; manufactured on one perfectly equipped 25 million feet capacity mill and sawn for the best in the logs; carefully piled, dried and cared for on a level, open yard; shipped straight National grades with NOTHING PICKED OUT! The result is uniformity in texture, manufacture and grades. Add to this an honest effort to give service and we think you will agree it's a "square meal." Move up to the table and let's get acquainted. You'll become a regular.

Our April bill of fare—THE NEW IDEA STOCK LIST, just out—will make it easy for you to place the trial order. Write for it.

Eventually yours,

WISCONSIN LUMBER CO.
